>> weren't citing an example of stalking. I cite one example of activity
>> in a public arena and then you say I "...dish it out, but can't take
>> it." You're not making sense.
>
>Stalking is a different thing than invasion of privacy.

Ok, I'll agree with you there. Now if you were in the habit of hollering in the house so loudly that the neighbors could hear every word, has your right to privacy been invaded?

If a neighbor has a fight with his wife and they both run around screaming at each other, do they have a right to privacy? Should you NOT call the police if it seems to get out of hand?

This may not seem like the same issue, but it is. Radio signals propagate everywhere. That's a physical fact. If it matters to you, shield your house.

>> Why? Because the user has a mistaken notion that somehow their
>> cordless phone is a private connection? Does a person's ignorance
>> mean they should still be protected? What about the rest of society
>> that isn't ignorant? What about the public resources this person is
>> using?
>
>See, you are just looking at the situation from your side. So what if the
>people are ignorant, that doesn't mean that you can take advantage of them.
>Look at it from their side.

So what should I do instead? Should I go stupid so you can lull me with a false sense of privacy? What's wrong with telling people that they're using a modulation that anyone can detect with ease? What's wrong with telling folks that they need to use a spread spectrum cordless phone if they hope to stay out of their neighbor's scanner? What's wrong with telling them the truth?

Or do you think the general public just isn't fit to comprehend all this?

>> I think you're deluding yourself as badly as all those Congressional
>> Legislators who heard the siren song of CTIA PAC money. The only

>> thing I can't figure out is what's in it for you?
>
>I'm not deluding myself.
>What's in it for me? What are you talking about?

At least the Congressional Legislators got money for averting their eyes. What social benefit do you see from ignoring everything around you?

Basically the answer is simple: NO, you won't immediately go down in flames. But you may affect the navigation instruments. If the pilots are alert, they'll figure it out and ignore the bad readings. But if they're not and they're about to land --you could run in to something.

I liken the situation to carrying strong magnets around the wheel house of a major ship. You may cause the compass to deviate. And chances are the ship's pilot will probably notice the error. However, if the ship is in a shallow channel and they're working hard not to run aground, you could end up causing major mayhem.

Similarly, there are multiple navigation systems on even the smallest aircraft. Though you might interfere with one or another of them, you aren't likely to cause much damage while in cruise. However, while on approach to an airport, you'd better get your act together. Even though the possibility for error is remote, the mess you'd cause if things went wrong is not insignificant.

While I can cite United States Regulations backing this up, please remember that aircraft are international vehicles. Basically the rule of the high seas applies to aircraft as well. As with a ship at sea where a captains word is law, so it is with the pilot in command of an aircraft.

Argue all you want, folks, just do it on the ground.

i live in sacramento, ca and have been using a pro-2052 scanner. i listen almost exclusively to the trunked sac city and sac county police freqs. the only problem is, there is no good documentation on the freq id's! all of the information i have is for the most part wrong-- even with the 2000 police call.

example: police call lists sac county records freq as 8496. actual listening has shown it to be 8336, while 8496 almost never has any activity on it! i am looking for a website, or maybe someone has a list of the current and correct freq id's. anyone out there have any ideas?

thanks in advance. marc

>Where can I found unbiased, reliable and (for my non-technical brain)
>comprehensible information on what equipment I need to ensure that someone
>is not being tapped or bugged?

The frequencies and modes used in some advanced bugs are difficult to detect without complex equipment by design.

Visit http://www.tscm.com for some background on these items.

Hard to say honestly where to get 100% sure help here... you may be asking the guy who bugged you to de-bug you...never know.

You can do some at home tests for staters: With a battery powered manual tv, go from room to room and check each channel by adjusting the fine tuner from min. to max... if you see a tv picture of youself...house then something is amiss;

likewise use a radio in the same manner, and a scanner ; with these you may want to remove the antenna and move about the room with the volume up as you pass occupied frequencies any bugs you cross will create feedback on the frequency you hit.

Services from a professional de-bugger can run from $80/hour up, up, up; check them out before you buy...!

Just remember OPSEC (Operational Security/Secrecy) keep details off the air and off paper...reduce risks at hand.

Some consumer products offer some protection for home/office phones and related but the value is dubious.

Hope this helps some.

Very much hearsay, as I can't remember where I read it, or how reliable the source was, but I read that the Nextel Direct Connect feature uses frequencies in the gap between the 2 halves of the cellular service, somewhere in the 851-865 MHz range. However, it would still be digital, as macjap3 stated, so it can't be monitored on current scanners.

10 hours use. That's it. Been keeping this in storage for a few years in a special container. Cosmetically-absolutely clean and perfect. Has the cell and speed mods done. I will swear you won't tell this from new. Comes with original antenna and owners manual that is spot and wrinkle free. Non smokers. Consider it new. $325 shipped with insurance. I accept Paypal,money orders or checks. I live in Omaha and have sold a few scanners on here. thanks

ALL of Nextel is actually on what were SMR (specialized Mobile Radio) frequencies, which were not and are not cellular. Nextel converted those to iDen, which is a kind of TDMA (digital) technique. There is no difference between the frequencies used for "direct connect" and normal telephone calls... just a difference in what the system does with the "call" at the switch, and how the handset deals with it... push-to-talk vs. full duplex. Nextel has been out there bidding on new frequencies, but for most (if not all) of their current installation, they have not and are not occupying cellular or 'PCS' frequencies.

"M. Schneider" wroextte:

Also have this little booklet that contains all the individual cell and cordless frequencies.

I've been playing around with my new PRO-94 scanner and have some questions regarding the trunking. I have found from a variety of sources the frequencies for the Albuquerque City and Bernalillo County police. I've programmed them in and let it search and get very little actual voice communications. I've programmed the scanner for EDACS and as far as I know, the frequencies are in the proper LCN order. One of my questions is: How do you determine the LCN order? Is there a rule or a standard way or is it just as the discretion of the frequency manager when they set the system up? Also, while I am searching in trunking mode, an ID will flash on the scanner and then go away. No voice, no noise, nothing. It only stays on the display for less than a second. What's up with that? Also, sometimes an ID will come on and there will only be a sound similar to data. Again, what's up with that?

I think I am doing the programming wrong since I have been to one of the emergency communications substations (just got a job working as a dispatcher there, too!) and there is a lot more communications going on than I'm hearing over the frequencies. I'm hoping to find out more information on the frequencies that are being used, but in the meantime I'd still like to use the scanner and need some help with this thing! I've noticed that I'm not the only one who feels the manual sent with the PRO-94 is less than adequate. Thanks in advance for any help!

Dave

o

you should hear whatever is on 411.000 if you punch in 432.600.
this is an old trick used when most scanners were double conversion to
receive any gaps in its range. just add 21.6 to any freq below 420
the signal will be a little weaker but useable.

Shawn,

Throw out the amp and buy a good quality beam antenna with a rotor, or go
with a better grade discone. I recommend the Diamond J-130 discone from
personal use.

>Is this actually a legally mandated civil aviation/international
>aviation rule?

The current restrictions on electronic equipment aboard airliners
began when a group of passengers was listening to a football game on a
portable FM radio.

The cockpit crew saw the navigation gear acting funny. They
investigated, found the guys listening to the radio, and asked them to
turn it off. The nav equipment went back to normal. Just a little
while later, the nav stuff went wonky again, and the crew found that
the football fans had their radio on again.

That tale was in one of the computer mags when the ban on laptops,
etc., had first become a big deal. The article said that was the only
documented case of interference, but the aviation industry being what
it is that was enough.

I am waiting for the day when a BATF/SS/FBI-HRT/DEA raid goes real wrong. Like they take out a day care. Or a retired folks home. Or a church full of non political worshipers.
OR, when they go up against someone with the brains to use their own tactics to kill a bunch of human scum. All of the afore mentioned agencies have some decent, hard working, well meaning employess. And a lot of gung-ho goons who do not understand anything about our constitution. If a raid team gets eliminated the rest might stop to think. Up to now they are the ones doing most of the killing. Imagine home made claymores. Or a porch that collasped to a killing pit. OR a flame pit. Their bullet proof "vests" only protect against one threat. Imagine a comercial insecticide (one is derived from Nazi WWII nerve gas experimnents and used to get a few farmers every year back in Ky) that is sprayed on the raid team. Twitch city.
And no, I am not advocating killing anyone. Either innocents in a day care, or the scum hiding behind the badges they dishoner.

Actually, it was more of a feature comparison than a review. And
it was published by the US distributor for AOR.

Try
http://www.butel.nl/ar5000/5000.html

Maybe it is posted there.

Probably nothing. Why would anyone go trolling through Usenet looking for a
current model scanner unless they wanted something for nothing?

Try Radio Shack - they're still selling the PRO-92.

I will be broadcasting Minneapolis police and fire channels
at www.live365.com this Saturday afternoon and evening,
on and off. If there is interest, I will schedule dedicated
days and times for more of same. Please let me know.
To find the broadcast:

1) go to www.live365.com
2) do a "search for": director373

If my scanner is 'on the air' you will be taken to
the broadcast.

I will most likely be doing the same on Sunday afternoon.

1695. Control a bc245xlt w/ a Macintosh?

Newsgroup: rec.radio.scanner
Date: 2001-01-20 06:18:08 UTC
From: Ed <EdTV@studio.city>
Message-ID: <190120012218088722%EdTV@studio.city>
Source record: 71844

I hope someone can help me out here,

I got a Uniden 245xlt for christmas, and I would love to be able to control it with my computer. I have a Macintosh G4 450 single processor, running OS 9.1 I found a program called Cat Scan to control the 895(?), and I was wondering if it might work with my set up. Is there any other Mac/scanning software availiable? Also what would be the best way to interface the G4 and the 245xlt?

Any help would be much appreciated.

Thanks,
Eric.

From: Paul Green <pgreen@concentric.net>
Message-ID: <94c1kt$m9q@dispatch.concentric.net>
Source record: 71599

Thanks for your response!

By way of background, if need be, I can spend a few bucks. Frankly, I would rather buy the equipment than to pay a "sweeper" on a recurring basis. However, I have no idea how much equipment I should buy, or, for that matter, what is good, what is not, and how much of an investment would I need to make to get what I need.

It does not help that each site has its own spin. Naturally, the spy shops say that the equipment they sell is adequate to the task, while the professional sweepers say you need to hire professional sweepers. Unfortuantely, it's like medicine. If you have cancer and go to a cancer surgeon for an opinion, he will almost invariably tell you that you need surgery.

Sorry to rant, but I do find the situation frustrating.

Thanks again!

I simple RF detector or a frequency counter would do the job if there is any kind of wireless transmitter in the house. A simple sweep of the house would detect 99% of all bugs (no spiders ;-).
If its a wired transmitter you can look for wires and follow them back to the recorder.

Optoelectronics sells low cost devices that would be more than capable of finding the wireless ones:
Check out the Model "CUB". Under $100.

Posting the following for all who are seeking it:

>>>The following is the 30 to 80 channel mod for the 30 channel
>>>BC60XLT-1. The mod was found on a scanner BBS and was
>>>posted by a guy named Steve Powell.
>>>
>>>"Open up the radio to the logic board. This involves removing
>>>the back plate and battery door by removing the four screws.
>>>Grasp the top plate of the radio, containing the knobs, by
>>>thumb and forefinger, and gently pull it away from the front
>>>plate. This exposes the circuit board which contains the
>>>speaker. There is a metal shield held by four screws that must
>>>be removed. Under the microprocessor there is a number "1"
>>>printed on the board. Below this are the two solder pads. Bridge
>>>them together and you've got 80 channels."
>>>
>>>I did this mod, and it wasn't too hard to do. I soldered a single
>>>strand of wire extracted from a piece of stranded wire, a very
>>>short piece, and carefully soldered it across these two points.
>>>Thinking back, it may even be possible to just drag a small
>>>amount of solder across them to bridge them. Give it a try!
>>>

In a former life we routinely used laser bounce to bug window panes and windshields of cars. Lightbulbs can also be substitued to gather audo and retransmit infared. Vibration sensors using high gain mics in sewers and lets not forget about the IF of TV's and Radios which can be directly modulated and received while the devices are on. Impossible to detect without completely tearing the radio/tv apart. The list is long!!!

Beware of a scam out of Georgia and Louisiana. Khalid Jones is his name, email is backdoorman@hotvoice.com He advertised a Uniden BC780XLT new in box. I have his original post attached below where he indicates he received 2 as gifts and only needs one, well the story changes everytime. He also channels his money through someone else that he first called him a cousin, then its his sisters house. He indicates he has a contact with several of these and other items for sale cheap, stolen? not sure. I did a lot of research and found phone numbers of the person he channeled the money through and was fortunate to get my postal money order back, lucky me! Let my stupidity be you advanced warning: IF ITS TOO GOOD TO BE TRUE ITS NOT FOR REAL!
Here is the original post from the news groups:
"This scanner is a jewel due to two of my sons bought the
same gift i have two ofthem i am keeping one and selling the other.The scanner
has 500 channels,10 priority channels,covers 25mhz-1.3ghz,and many
other feautures and it can be used in the house or car.I am asking $300 my friend
bought from a cb shop in Houston texas he paid $389.00 so i am asking
$300.00 or best offer nothing less than$250.00.Take care"
BEWARE!

Funny you say that as you are admitting you get cell reception right in here.
Now how else do you think would be the easiest way to catch someone?
They simply get your IP address, and current time the message was sent,
call the domain the IP address belongs to and tell them you are law enforcement
and you need the person's identity and address.
It can be much simpler. Someone could post with their real name and bingo, if you
own a telephone, even if unlisted, they can find where you live or where you are at
depending if you are home or using a cell phone. :)
Every post you make to the internet also has a tracking code attached that your ISP
simply can click on and it will tell them which one of their customers posted the message
even if all precautions were taken to hide your identity.
Also ISP's can track your entire IP stream, recording every single bit going in and out of
your computer. I wouldn't be suprised if everyone had some sort of watching of them going
on.

Just a quick note on the DC Events:

Time is : 12:33 EST and the motorcade is about to start to the White House:

Route:
http://www.digitalcity.com/washington/inauguration/main.dci?page=parademap

Frequencies active across the board:

Complete details to be posted to :

http://www.expage.com/pbscannerdc

Which currently has a list of Washington, DC : Frequencies, Links, Pages,
Webcams, and Related.

Anyone else monitoring the activities in DC?

BTW: Military Air Monitors may want to start montioring for the USMC Helo to
fly North to NY with the Fmr. President and Family in about 2 hours.

Is your "state of the art" antenna right-hand circularly polarized, as
the UHF SATCOM signals are? Or is it at least cross-polarized?

For sale, new in box RCA RP-6150 (which is a repackaged
Pro-62)
200 channels in 10 banks, plus 10 monitor "scratchpad"
memories.

Excellent triple conversion receiver, short squelch tail,
good audio.
Received a good review in the April 1998 Monitoring Times.

Took it out of the box and programmed in a few freqs to
verify it
works good. With manual, power cube and box. Photo
available.

I'm asking $60 firm plus a few bucks to help with shipping.

Email me if interested.

Thanks,
Jon

1726. Examples of discrimination against white Americans

1) We have "Black History Month", but no corresponding "White History Month."

2) Most universities and colleges have a "Black Student Union", but no corresponding "White Student Union."

3) Most universities and colleges also sponsor "Black Pride Week." Black students are given special t-shirts and encouraged to show their "black pride." If white students acted in a similar manner, they would likely be expelled for their actions.

5) In recent years, Martin Luther King, Jr. Day has been added to our calendars as a holiday. Meanwhile, Columbus Day has been de-emphasized or removed entirely. It's okay to honor a known womanizer and communist symphathizer, but not the man who discovered our country.

6) Why does the United States Postal Service issue a series of "Black Heritage" stamps, but no corresponding "White Heritage" stamps?

More to follow...

I almost got taken by him as well. I was fortunate enough to be able to cancel my money order before he (they?) cashed it. I did a bunch of checking (phone calls) as well and got vastly different stories each time. He did guarantee (voice) that I would receive the BC780xlt even though he had to transfer the money to his buddy (whom he would not name). If I did receive it, more than likely it would have been stolen property.
Stay away from them (khalid Jones aka backdoorman@hotvoice.com)

Couldn't a bogus seller simply make one up? He could just as easily
get a valid number from an eBay sale, pawn shop, manufacturer website...

Damn, I'm sure glad I followed my gut on this one. I got a phone number from www.555-1212.com for the address he wanted the money order sent to and called it. The "sister" never heard of Khalid Jones, for all we know she could have been involved also.

No, not really.

Anyone can do to a radio shop, their friend, etc., and copy a serial
number down and submit it. What does a serial number prove?

Dan

Greg did what anyone dealing on the groups should do - his homework!

Doing so will prevent many frauds from occurring.

Well, I know faxback has a lot of manuals and documents on it, and it's free. I'm not sure about being blind- That is, I'm not sure if a fax would do any good. Try a radioshack store they'll get you the info for faxback.

If you find out, please let me know. I use my Mac to control my Pronto remote control. I use Soft Windoze 98 and have a serial cable that connects to the Pronto on one end and my serial port on the other. I don't have any problems with that. I'm sure if you can map the pinouts you might be able to build a cable. Or, since you have a G4 you probably have USB. there might be USB solutions in the PeeCee world. I thin I remember a Mac scanning sight, let me check...
This is all I could find: http://www.g0oanint.demon.co.uk/othersites.html

I hope this gets you started on the right track.

I know about that, but I have gotten lots of manuals off the web before, but

this scanner might be to new? I had someone to point me to the web site for the radio shack 2011, and it helped a lot. I have the manual from the box, but I can't read it. Thanks for the info. What I want is how to reset it back to factory defaults. Maybe someone will have a manual around and they can e-mail me back the info.

The frequencies can be found on the FCC web page. Howeever, they use digital transmissions and (according to their web page) use encrypted transmissions. Good luck in monitoring these ones!! If you can decrypt the transmission, hope the FCC does not findout about it!! I do believe federal statutes would come in to play here. Serious stuff.

"More to follow" ?

May I step out on a very short limb and speak for the
rest of the news group... NO !

Sure wish the NNTP server I use would down load more
useful header information so I could just block the
entire Deja domain period.

Why don't you go post your crap to a political news
group?

You won't do that because you are a coward.

If you posted your crap to an appropriate group
people would be interested and respond to your
posts and you would then have to defend them.

Then you would have to think. God forbid that.

I wouldn't say it's useless. RS still sells crystals for these at around
$5 each. At least, they were around that the last time I bought a
crystal.

Sorry, no conversion kits available that I know of. The logistics of such
a kit would probably be more costly than a new scanner. You would need to
build the entire fequency mixing circuit plus add some type of user
interface. How would you then switch this circuit between channels?

It's not always that easy. Some ISP's demand a court order
before turning over their logs.

> It can be much simpler. Someone could post with their real name and bingo, if you
> own a telephone, even if unlisted, they can find where you live or where you are at

None of this is relevant if you post from a public kiosk (or if
the ISP relies on address-based authentication only -- cable
companies? -- and the poster spoofs the IP).

> Also ISP's can track your entire IP stream, recording every single bit going in and out
of
> your computer. I wouldn't be suprised if everyone had some sort of watching of them going
on.

Who has the resources to do that kind of monitoring?

You stupid idiots are too young or moronic to remember that most blacks in this country are here due to their ancestors being brought over as slaves...Then were pissed and shit on for just about all of the 19th and 20th Centuries...

What if it had been the other way around?

Let them do what they must...what are you so damn afraid of?

Sorry, but that is wrong. The majority of blacks in this country today are not descendants of American slaves, but are descendants of blacks who entered this country after slavery was abolished. In fact, a huge percentage of the black population entered this country within the last thirty years, attracted by this country's pro-black government policies.

Check it out for yourself if you don't believe me (and you won't believe me, so do check it out on your own).

Hey, dork brain
Columbus didn't discover this country, idiot. And Columbus should be relegated to the nethermost regions of historical obsecurity for what he was; a mass murderer anong other things.

You should be happy about one of the blackest days in America.
Sieg heil der new Fuhrer Herr Bush

He will see to it about taking away Black rights. And unions. And what little is left of the Constitution. Good-bye Social Security. AFDC. SSI. Give the $ to the big corporations.

If it's brand new, then just take it back to radio shack and get your
$199.00 back.

Nice try though.

Not necessarily. NexTEL has bought out practically every private communication provider on 800 MHz (I wonder why DOJ went after Microsoft but not NexTEL), so many "NexTEL" systems are legacy analog trunking. Some of them are not even Motorola format.

Encrypted my ass....it's just digital TDMA, no crypto...
"federal statutes" would have no bearing on unencrypted
message traffic...(ECPA not withstanding)...

you want to decode it, get a Motorola 2670 with the TDMA
option....lease one, you don't have to buy it....(unless
you have a spare $30 grand or so laying around)..NexTel
system techs use the 2670.

Now if you're talking CDMA, you need an HP, and some
"proprietary" information from the network infrastructure
provider (ie Sprint for example) to set up the service
monitor to recover the message traffic...again, unit can
be leased...oh yes, one other thing, CDMA (type used for
1.9 ghz PCS providers at least), does employ crypto to
provide COMSEC functions...hence, it's secure for all
practical purposes...('average' scanner buff ain't gonna
follow my advice here and go out and lease a service
monitor and acquire the intel they need to set it up)..

the system techs and other "authorized" personnel will
always have the ability to monitor any and all 'wireless'
messages...as well as the "serious" hobbyist or aversary
who's willing to invest in the equipment that's needed.

Q'apLa !!

These are good points. The American black man is an annoying nuisance.
If they put half the effort they do into bettering themselves that they
put into whining and working themselves up... they'd be as successful as
whites.
American blacks are the most racist people on Earth.
The ANCESTORS of the American blacks were enslaved and
today's blacks are trying to capitalize on this bit of history.
Whenever a black doesn't get what he wants he blames it
on racism. Wish I had catch-all scape goat like that.
I really get a kick out of these American blacks who adorn
themselves with traditional African attire. Its totally hilarious.
Give them a one way ticket back to Africa.

Oh yes. I forgot about the Black Miss America contest.
How can blacks hold there heads up and bitch about unfairness
after sponsering such events.
Makes me want to say, " Go back to Africa you bunch of fucking
niggers" But I won't cause I'd be accused of being a racist.

I think the reason blacks have a seperate contest is because a
black contestant would never win with white ladies running.
Even the black male judges would vote for white ladies because
they are much prettier than blacks.
Look how many black guys are dating white ladies.
And look how FEW white guys date a black lady.
I hate having to admit it but a very large majority of
blacks are homely and unattractive. (large distored facial
features.. lips, teeth, jaw,kinky hair, etc)
They do look a lot like the pitbulls of the human species.
This is not racist talk. These are facts.

If you just want to program your 780, there are freeware utilities out there
or
you can put the commands with freqs/channels, talk group ID's, search ranges,
talk group text tags, bank text tags, scanlist tags, etc... in a text file and
upload it with a communications program(procomm)
or
make a procomm script and run it.

I knew sooner or later we would agree on something!

These folks usually have few branches if any in the family tree.

OTOH, if you were these folks how would you feel as an adult when a 16 year old black kids jump ahead of you and gets to work the drive up window at McDonalds instead of you? Being white and feeling inferior must be hell, ehh?

Glenn

Notice the only people so far who are not racist in here are mostly
canadian, and europeans except for a very small amount of freaks like
MWBryant who were beaten by their drunk daddies so are too filled
with hate to see past their hate for their daddies to see the truth in other races.
Canada and Europe doesn't have the same kind of black people or
the same problems. Over there, blacks act normal, civilized and speak
with cool accents and are great people. They fit right in.
You foreigners need to come over here and live awile and see how blacks
effect you then you will understand and be "englightened" as to what we
are speaking of. Until then, you have no business talking as you don't have
a clue as to what our issues are.

From: bob dolson <bdolson@sprynet.com>
Message-ID: <94fjq2$n16$1@nntp9.atl.mindspring.net>
Source record: 71594

I finally found out what those NJ State police disposition codes are! Pat on the Strongsignals trunking board posted a reply to me which is quoted below...
==========
Sorry I'm so late. Code 20 is relatively new. It represents action taken after a MV stop. 20A is for hazardous summons (moving violation ect.) 20B is non-hazardous summons (equipment violation ect.) 20C is a warning for a hazardous violation and 20D is a warning for a non-hazardous violation. Multiple letters equal multiple dispositions.

Pat

It isn't illegal to be racist you moron.
Maybe he should report you to your ISP for being anti-racist.
It's the same thing.
All he's going to do in the worst case is pull out his credit card
and call another ISP and be setup in less than an hour and be right back
in your face. The best thing you can do is ignore him by using either a killfile
or descretion. Since you don't have any, I suggest you use a killfile and add me to
it while you are at it.

I don't know about the 780xlt, but I know my 895xlt backlight burned
out. It was on most of the time, but I had only had it for a little
less than a year. Everything else still works, just no backlight.

Honestly I dont think so.......

I have a pro2026 with a similar ORANGE display ... and it has been on almost non stop for about 7 years now ... have had in the car too, in all temp extremes and hasnt even faded... I really dont think you will have anything to worry about , I too , leave my 780 on all the time and plan to do so....

If anyone is interested I started a 780 egroup at

1811. VHF two-way radio wanted (read for details)

Newsgroup: rec.radio.scanner
Date: 2001-01-22 00:23:01 UTC
From: methusaleh11@my-deja.com
Message-ID: <94fuh0$c1f$1@nnrp1.deja.com>
Source record: 71510
Cross-posted to: rec.radio.scanner,rec.radio.swap,rec.radio.amateur,rec.radio.amateur.equipment

Looking for a working used (or new, should I be so lucky) but decent handheld or mobile VHF low band two-way radio, age is not important. Frequencies I will be needing are around 44MHz, minimum two channels, prefer five to ten. I work for a small-town police department (can furnish proof upon request) and am looking for a radio to have in my personal vehicle while working details, etc. Please email me if you have any equipment available that would fit the bill.

Does Guinness know about this guy? He would have the record for oldest
living human. Of course, he's more likely a 16 year old troll.

Glad to make you killfile. What that means to me is that a
negro ass kisser can't handle the truth.
You can only spew out politically correct BS and have no
ability to think for yourself.
Good riddens faggot ass and go fuck you're black ladies
in the ass.

You need to read my post again stupid cunt. You've got your
head up your fucking ass so far its hilarious.
All you can do is tow the crybaby black PC bullshit.
You can't even think for yourself.
I said that I feel like having all those whiny nigs sent
back to Africa. Because they are not happy here in the
USA and never will be. It would solve the problem for
everyone if they were.
Good riddens you cowardly prick. You just can't handle
other viewpoints can you.

Strange how idiots like bonzosteve@my-deja.com come
up with new defintions of the word racism.
bozo says: OK for blacks to complain about white's in any manner

bozo also says: Whites who complain about blacks for any
reason are racist

I say bozo can go to hell.

Finally someone has something intelligent to say on the subject.
BTW how do you know it was your ancestors.
Just cause we're white doesn't mean it was our ancestors.
What the blacks need to do is stop trying to get sympathy
for something that supposedly happened to their ancestors.
Their attitudes are what keep many of them from moving up
the corporate ladder... not this imagined racism.
Who the hell would want to hire a black with the racism
attitude. They are alway trying to get mileage out of the
issue because so many of them can't perform.
I have a third level manager who has none of the black
attitude and he is the coolest guy around. He just does
his job and performs well. So I know it can be done.
Enough said on the subject unless some other asshole
wants to step in.

I'm curious Mr. Snot. Do you live in public housing in a "black"
section of town? Where does all your conflict come from? What
issues could you possibly have?

I think you are the one who should be reported for changing your e-mail address to thwart our killfiles.
Also, like I said in another post, all he's going to do if his ISP dumps him is pull out his credit card, call any
one of several 100 local and National ISP's and he will be back in your face within the hour.
You cannot get rid of people on the internet. You might as well learn how to use a killfile.
Weaker men have died standing up for themselves against opressive jerks like you with your stupid "one world" ideals.
Stronger people than you have died trying to fight them. :)

Doesn't matter what your opinion is nor how irritating you are.
This is a free country and this is what free speech is all about.
To live, say and if have to be, die for your right to have your own opinion.
Don't let the monkey lovers get you down my friend, I encourage you.
Just learn to tone it down a little so you don't get consumed with your own hate.
I understand you are in alot of pain and life isn't fair. No need to be consumed
with anger though and I say this for your own health as you will make yourself sick
if you aren't already. There is a time to stop hating so much, that's when it starts to
hurt
yourself. That's when it owns you instead of the other way around. I understand why you
hate though. It's easier to hate than cry or hurt anymore, just don't let it take you over.

I don't think his ISP is my-deja.com .
If you are going to report him, might as well report him to his ISP
instead of reporting to the place where he posts news from.
Unlike us, reporting people like stever will probably thwart him from causing
us grief anymore and leave us be. We on the other hand don't give a crap.
We can just get another ISP as we are used to the process.

People who make comments about their perfect grammar and spelling
skills tend to get flamed when a mistake is noted.

It's better to keep quiet and have people think you're a fool, than to
open your mouth and remove all doubt.

Hey I'm all for nostalgia, believe me. I work in hi-tech, but quite
enjoy the lo-tech at home. There are the guys who claim that they just
don't build 'em like they used to. I agree. They build 'em better now
than they ever have. Oftentimes they built them more stylish in the
past, but more efficient and useable they are not. This can be applied
to anything, of course. Not just scanning receivers!

I think everyone should be proud of their heritage. American black
heritage is unique, this is undeniable.

> 5) In recent years, Martin Luther King, Jr. Day has been added to our
> calendars as a holiday. Meanwhile, Columbus Day has been de-emphasized
> or removed entirely. It's okay to honor a known womanizer and
> communist symphathizer, but not the man who discovered our country.

MLK's message was one of peace and harmony, Columbus' message was one of
genocide, rape & pillage and take-by-force. Who would you rather live
beside?

> 6) Why does the United States Postal Service issue a series of "Black
> Heritage" stamps, but no corresponding "White Heritage" stamps?

Because the relevance of blacks on the history of America has been
sorely neglected.

> More to follow...

I've heard enough, thanks. This has absolutely jack to do with the topic
of this group.

There is no need to raise awareness to black students either. Its just a
bitching session.

>
>
> > 3) Most universities and colleges also sponsor "Black Pride Week."

Many OC PD's are switching to APCO 25 (one of the beta tests for APCO 25 was in Orange County, and now they're lighting it up one agency at a time, for good). Anaheim, Brea, and others have already switched. Is the South dispatch in the 506MHz still active, or did they move that too?

Regards,

Doug Gavilanes
Garden Grove, CA.

C'mon, guys. This has been out there forever. Fire departments and other emergency services have traffic light triggers that will give them a fresh green light upon approach. They're either controlled by a radio signal (hence the antenna), or optically (have you ever seen a strobe light atop a fire truck or ambulance rolling code?). The optical sensors on the traffic signal poles look "T" shaped, with optical windows facing both directions (180ï¿½ apart), up and down the street. Look at the cross-street's traffic signals, and you'll see another pointing 90ï¿½ to the main street. Just don't go and hook up your timing light one night, and drive down the street pointing it at the signals.

Regards,

Doug Gavilanes
Garden Grove, CA.

So much for free speech in America! Did he not realize that the only thing worse than a hate crime was hate speech? He deserves to die for his political incorrectness. I would suggest first he be tortured by having to listen to the entire works of Maya Angalou.

Next her running mate Wesha'l Overcum will teach him the meaning of Kwansa. After that he shall be sentenced to four weeks of "sensitivity" training and then dragged through the streets tied to the back bumper of a 1992 Caddy Bro-ham that is playing rap music at full volume and engaged in a drive by. That will teach him, then we get his ISP to cancel him.

Lets find out what your ISP thinks of this Dickless.
You see dumbdick... you have to stop participating in
this back and forth stuff before people will believe that
you really care about it one way or the other.
What really is pathetic is how much of a hypocrite you
are. I know you feel the same way but are too much of a limpdick
to express your real feelings.

Of course I am a hypocrite, I have acquired the new sensitivity of the left. I am working extremely hard at eliminating the last vestiges of elitism. I take no positions to offend anybody, ergo I agree with everything.

I humbly apologize if anything I have ever written in my entire life was offensive to you, you might also want to read any of several books I have written for any statements you find offensive. Please let me know which ones caused you any angst and I will have them burned at once.

Perhaps you would do me the favor of reviewing my present book as I complete each chapter, God forbid that I may include something that is either racist, demeaning towards women, midgets... whoops little people, or any other thing that might offend the most sensitive sole.

My life is now dedicated to setting my standards so low, that all will find them agreeable.

Mike,
Not at all useless. As John L. says, you can still get crystals for these from Radio Shack. I just got another one of these in an ebay auction lot. I went by RS on the way to work, picked up a couple of crystals they had on hand and ordered a couple of more. They can be very handy if you want to listen to all the traffic on 1 channel (police chase, storm watch, etc.) yet still keep scanning other frequencies. And they are good little receivers.

That is all markj seem to want to do, create a pissing contest. Why can't
we
talk about scanners here?

A commercial license (in the US) does NOT give any privledge on
amateur frequencies. That is why myself & many others have BOTH.

No.

>If not, is the Weltz
>company still in business and if so, what do they sell?

The Welz WS-1000 and WS-2000 were "badged" versions of the Standard AX400 and AX400B/E and manufactured by Standard/Murantz.

That's true.

Racist, anti-Semite, ultra-conservative: It's just as
legal to be those as it is to be a liberal.

It would be good for people here to remember that.

>Maybe he should report you to your ISP for being anti-racist.
>It's the same thing.
>All he's going to do in the worst case is pull out his credit card
>and call another ISP and be setup in less than an hour and be right back

You assume he is in an area served by multiple ISPs. Such
is not always the case. For some people in rural or out-
laying areas, one ISP is all they get.

>The best thing you can do is ignore him by using either a killfile
>or descretion. Since you don't have any, I suggest you use a killfile
and add me to
>it while you are at it.

Discretion.

That's always nice.

Don't think so ... although the Yaesu VR-500's user interface shows an
unmistakeable familial resemblance.

>If not, is the Weltz
>company still in business and if so, what do they sell?

AFAIK they (Welz --- no "t") sell amateur radio gear and antennas in
European markets.

1894. Re: Strange Devices on Street Lights (San Gabriel Valley in LA County)

Newsgroup: rec.radio.scanner
Date: 2001-01-22 15:18:26 UTC
From: Stephen Verbil <sverbil@usa.net>
Message-ID: <3A6C4F42.26FBCAA7@usa.net>
Source record: 71493

Read his post carefully, and you'll see we're not talking about intersections here --- or anything to do with traffic lights. And, as you cn see from the picture, the antenna is oriented for omni, versus the yagis on the system you're talking about (on its way out, incidentally, as the "Opticom" system you also talked about seems to be on the upswing in popularity) which are necessarily pointed in the correct direction to detect inbound vehicles requesting a green light. Two very different things. The Ricochet system is a neat one, if you'll be satisfied with (maximum) 28 KB access from your computer. By the way, Opticom systems in the 2nd generation (they've been available since the 80's) use encoded strobe signals --- they're not just simple strobes. There's a timing code, and a sub-code on top of that, so that individual states, counties or towns can reject others' devices if they so desire. A timing light to activate them won't cut it.

---Steve

> > > 20th Centuries...

I beg to differ, Mr. Mathemagic. The 20th Century was less than a month ago...and severe discrimination against blacks is still within living memory of many people, black and white, today.

When *they* get a square deal (which is still hard to come by for many), then their complaints will be unwarranted. Until then, yours are unwarranted. I have none, since I have never once been discriminated against. Every opportunity I have had I have come by fairly and on my own merits, whatever they may have been. If you cannot make the cut against a black person, or anybody else for that matter, maybe you need to examine your own shortcomings (which I'd say are pretty numerous, based on your multitude of whining malignant posts).

BTW, have you gotten professional help yet?

1902. Need Help finding source - random data packets transmissions anywhere from 40mhz to 320mhz - Orange County, NY

Newsgroup: rec.radio.scanner
Date: 2001-01-22 18:18:01 UTC
From: Steve Fleckenstein <spfleck@citlink.net>
Message-ID: <tP_a6.315$IX6.33251@news-west.eli.net>
Source record: 71401

A friend in the A/V business got a call from one of his clients complaining about noise getting into his 72Mhz wireless mike system in a church. What we found were random transmissions of data packets, perhaps either wideband FM or AM on just about any random frequency between 40 thru 320mhz. In particular between 11AM and noon Eastern time 7 days a week, heard on 40.55, 169.765, and a host of others. Very strong in the Middletown NY area but heard just about anywhere within the county.. stronger to the west. Short 15 second multiple data packet bursts on one frequency on my pro-2005.. then gone and starts someplace else in the stated freq. range. Strong even when not near CATV, TELCO, or power lines out in the boonies. Only started up within the last two weeks. I'm going to cut an MP3 sample of what we are hearing so that anyone with ideas can listen to it and perhaps clue us into what we are hearing. What has gone on here lately.. well the local FM outlet WRRV 92.7 went totally lights out, doubled their output power and has a new microwave link to simulcast from the Pougkeepsie mothership. NYC Mayor was up here last week for a firemans funeral seen to have a complete RF communications support crew.. Otherwise just the usuall stuff. In county is a regional airport with National Guard C-5A's, FBI offices in Goshen.. and a host of microwave links between mountain tops. but this is new within the last two weeks.

What is this stuff ????

Thanks
Steve Fleckenstein

1904. 245XLT question

Newsgroup: rec.radio.scanner
Date: 2001-01-22 18:42:22 UTC
From: Track <hctrack@hotmail.com>
Message-ID: <94huuq$or2$1@bob.news.rcn.net>
Source record: 71403

I just "found" my scanner (but no manual) after moving recently and I've since set up the frequencies to scan the local trunk system. So far, I've had no problems listening to the radio traffic, but I was wondering if I could block certain talk groups from being followed, i.e. listen to the fire department and the police, but not the DPW. Any help is appreciated. Thanks!

>Subject: Re: Examples of discrimination against white Americans

>From: sdfgsdfg sefgsdfg@sdf.com

>Finally someone has something intelligent to say on the subject.
>BTW how do you know it was your ancestors.
>Just cause we're white doesn't mean it was our ancestors.
>What the blacks need to do is stop trying to get sympathy
>for something that supposedly
>happened to their ancestors.

I've been reading this thread with dis-belief as to the amout of stupidity
shown here.
This is the FIRST message that I've read that actually makes some sense.
If one actually THINKS about it ....
The SOUTH had a smaller population than
the northern states.... therefore less than
50% of the country were Southern slave owners.....
NEXT.... not all southern people were RICH and could afford slaves... so now
what are we talking .... less than 10%
of the total population of the United States
were actually slave owners.
Personally.... my grandparents were still in europe during the mid-1800's....
so I know that my ancestors had nothing to do
with any of it.

I'd also like to point out that IF it were not for the 100,000's of thousands
of WHITE
soldiers that fought and died during the civil war.... the black population
may stll be slaves (actually NO, since the machine age would have made it not
profitable to keep slaves to do slow & inefficient work...
so slavery would have been slowly discarded as farm machinery became more wide
spread). If the black population wants to use the ANCESTOR card.... maybe they
should all THANK us for fighting the war that set them FREE.

'nuff said.... I slid my 2 cents worth in and I'll just retire to reading
again.

Probably the easiest way is to put the fire, police, and DPW IDs into
separate talkgroup 'banks'. Assuming that you have the correct trunking
frequencies programed into a bank on the scanner and are in 'trunking' and
'scan' mode, you can just hit the number keys corresponding to what you have
setup in the talkgroup 'banks' to switch whichever ones you want on or off..

The other way is to just lockout whatever talkgroups you don't want to
listen to but then you can't change which ones are on or off on the fly like
you can if you have them in separate talkgroup banks.

of the United States were actually slave owners.<

True, most likely even less than that, but the non-slave owners still
went and fought with passion in favor of slavery.

> Personally...my grandparents were still in europe during the
mid-1800's.... so I know that my ancestors had nothing to do with any of
it. <

Likewise - but that doesn't mean I should not treat all people fairly
without regard to skin color. My grandparents came over in the 1900's
and 1920s, and some of them had total contempt for other races - and
they didn't even live near them!

> I'd also like to point out that IF it were not for the 100,000's of
thousands of WHITE soldiers that fought and died during the civil
war.... the black population may stll be slaves (actually NO, since
the machine age would have made it not profitable to keep slaves to do
slow & inefficient work... so slavery would have been slowly discarded
as farm machinery became more wide spread). If the black population
wants to use the ANCESTOR card....maybe they should all THANK us for
fighting the war that set them FREE. >

Like most anything in this world, the Civil War is far too complex to
disassemble rationally on a SW Newsgroup. For example, the real initial
issue wasn't the *morality* of slavery at all, although many
abolitionists were already rousing sentiment, but rather the matter of
states' rights to have slavery, and whether or not the US Government had
the right to prevail on the individual states to force them to do
something, when that authority was not granted to the Fed in the
Constitution. Like most political struggles, however, morality made
inroads quickly and the final result was a great moral victory for the
abolitionists, rather than a really solid interpretation of states'
rights law, although we finally got an amendment that belatedly put the
issue to rest.

This effort, BTW, was ultimately led by a Republican (Lincoln), one whom
I daresay is a different breed than those we mostly see today in
politics.

Source record: 71407

I bought a Bearcat BCT235XLT to replace my Radio Shack 20 channel scanner thinking it would be an improvement. However, I am very disappointed im my BCT235XLT as it won't pick up local requencies that my Radio Shack scanner picks up easily.

What's up. Did I buy a dud or what. The only signals the BCT235XLT picks up easily are aircraft frequencies.

Should I contact Uniden or could the unit possibly be defective or am I just stuck with a lemon.

Anybody have anything to say about the BCT235XLT. Let me know if you have any insight into the problem.

Thanks.

Tom

I believe that they use LEDs for the backlight on the 780, so I don't think
you have anything to worry about. Most likely the scanner will be extremely
obsolete by the time any of the LEDs burn out..:-)

Oh thanks White. If you were refering to me... I have plenty
of ISPs here in my large city. But, of course, that isn't an
issue because there is no reason for me to be concerned.
If ISPs pulled people's accounts for simply being an asshole
or upsetting mindless morons... yours would have been
pulled long ago.
Not everyone in the world thinks like you white.

Are you black? Go ahead and cite some examples of discrimmination
that blacks YOU KNOW have experienced.
Many blacks imagine they are being discriminated against
just because things don't go there way or they read something
into things that aren't there. Also, black GET AWAY with
discrimination all of the time. I'll cite you an example...
a black guy I work with constantly said, "That was mighty
white of you" and would laugh. I knew he had a sense of
humor about the whole whiny racial BS and I didn't think
a whole lot of it. But other white people in the office did.
And were totally shocked whenever they heard it.

"When *they* get a square deal (which is still hard to come by for many)"
You've got to be kidding! They are getting more than a fair deal in
this country. Our government agencies go way the hell out of
there way to make sure of it.
Stop listening to the crap about racism and pull your head out.

Very good points Labtech. Blacks should have never been
enslaved, of course, but I'm never taking ANY responsibility
for that horror or am going to feel ANY guilt. Even if me
doing so would make some blacks feel better.
Asians have done wonderfully in this country because they
have figured out how to and they're respected for it.
I know a guy from Viet Nam would in '75 was shooting a
machine gun in Nam about 4 years later was an Engineer
in America making good money. Nobody is going to tell
me blacks can't do the same thing. I have more faith in
them even if they don't in themself.

I am not black.

As to your assertion, no doubt - many people have this "us vs. them" attitude that leads practitioners to believe they are getting screwed at every turn. I know lots of whites who are this way, too. *LOTS* of whites. My Dad among them, even though he had a good job and a great place to live his whole life.

I personally know of no blacks who have been discriminated, but I don't make it habit of discussing this with most of the blacks I know. I do, however, frequently hear of racially-motivated events in my area that are blatant; for example, racist graffiti, occasional crosses being burned on lawns, and that sort of thing. If you want a personal example of general discrimination, an Asian friend of mine, a generous and hard-working person who is respected by many who know him, has been frequently taunted and harassed and threatened by people, complete with name-calling, for being Asian. He was initially turned down for duty in a local fire department because he was Asian, even though he passed all tests with flying colors, more specifically, because the employer thought he would have clashes with the potentially racists firefighters on the squad. This was ultimately turned around, but by that time he had lost interest and went into a field where people were more accepting. Make no mistake, racism is alive and well, even in mostly liberal areas like San Francisco region.

It will be a strange day when I think a joke among friends is discrimination (and it certainly sounds like he's joking to me). My friends and I joke all the time about these things, whether it's racial or political or lifestyle, and we do not discriminate against one

another :-| I hope you do not think this way.

1922. Yeasu VX-5 vs VR-500 as scanners

Newsgroup: rec.radio.scanner
Date: 2001-01-22 21:39:10 UTC
From: BillB <shg@onramp.net>
Message-ID: <3A6CA7AF.82F1E4BF@onramp.net>
Source record: 71418

The Yaesu VR-500 has received some good reviews as a wideband scanner, but their VX-5 transceiver reportedly scans essentially the same frequencies. They are both about the same size, and the cost difference is relatively small.

My question is what does the VR-500 dedicated scanner do for you that the VX-5 does not? Does it just do it faster or have more memories? If the VX-5 does 90% of what the VR-500 does as a scanner (and it probably does not, but that is my question), then it may make sense to just buy a the VX-5 with the added ability to transmit on the 2M, 70cm, and 6M bands.

Thanks,

Bill

Sometimes yes, sometimes no. As I mentioned in another post, an Asian friend of mine, who is doing very well and is a native-born US citizen, is often given a difficult time for his being Asian.

Of course, slavery is not your fault or my fault, and of course, we should not be blamed any more than we should start it up again. But it is in our best interests to understand what slavery and discrimination means in black history, how it affects blacks today, and how we as a nation must come to grips with the past to make a better future. Civil rights in this nation were still violated as late as the 1960's, and apartheid in South Africa was still in effect much more recently than that.

They probably can, and some do. I'm not going to go into it here, but there are dozens of economic and cultural factors that go into what makes a person what they are, and if a person is given a good chance by his/her parents and community, no matter who they are, they may well go far. Unfortunately, poverty (and the malaise it brings) is devastating to children, and moreso to some minorities than whites. The cycle keeps going, and it is hard for some groups to extract themselves.

The radio tech for the city came by our Fire Station the other day and told us that the city got some grant money to go digital and put computer terminals in all patrol cars. He went on to say that all of the communications will be encrypted. Our city just went to to an 800 MHZ motorola system a few years ago. I assume that not all traffic will stop?????
Since we are 800 MHZ and the highway patrol and sheriff and fire can all communicate there still would have to be a lot of traffic.?????????
How has it gone for other cities that have gone to digital? I was thinking of trading in my Pro 90 and upgrading. I think I will put those plans on hold.

I'm not sure about Winscan 780 but my opinion of winscan 2.1. is that it
basically sucks.
Seems buggy, does random strange things and the alpha tags are superimposed
above the LCD screen not in it. Yes, I've applied the patch.
Senss' BC245INT blows it away.
Just my $.02, your mileage may vary.

p.s. requesting private email response is considered bad manners, you posted on
a public newsgroup and as such a private email reply is of no use to anyone
else ;)

They seem to vary a lot. I bought a '235 about 2 years ago, sensitivity of that unit is great, as good as any handheld I have owned. Recently, I bought a used PRO-90 and sensitivity was awful. Poked around a bit and found that two of the bandswitch diodes by the antenna jack were shorted. (esd?) Replaced those and reception improved, but still not as good as the '235. Maybe just luck in getting a good one or not?

Message-ID: <Y44b6.31814$GS1.3728050@news02.optonline.net>
Source record: 71439

Bill,

The VR-500 adds SSB and CW reception, more step size choices, lots more memories (1000) and has continuous coverage over the range of 500 kHz to 1300 Mhz (less cellular in the USA model, of course), where the VX-5 has a "hole" in its receive coverage from 16 to 48 MHz and doesn't go quite as high. There are other differences as well, but those are the major ones. If you don't mind the gap in coverage, don't need SSB or CW or all of the memories, I would agree that the VX-5 might be a better choice, especially if you need a very robust handheld...it is a GREAT radio (I own both).

I'll sell you my VR-500 (complete with software, cable and service manual) if you'd like to try one out. Please e-mail me directly if interested.

Doug

Dispatch: 904 can you take a call?

904: 10-4

Dispatch: Complainant calling says he just got home from Christmas party and his girlfriend is going crazy. Says he doesn't want her arrested, just wants an officer to talk to her.

904: Did you say Christmas party?

Dispatch: That's affirmative Christmas party.

904: How long was he gone?

(I started to crack up)

Dispatch: (holding back laughter) Complainant did not state how long he was gone.

I cracked up. This might be one of those thing that you had to hear for yourself, but I laughed.

Check out the following URL for Santa Clara county:

http://www.geocities.com/CapeCanaveral/6298/clara/clara.html

Please note that some of the frequencies on this page are now
outdated. The City of San Jose reassigned all of their Police
frequencies early last year. These are the new assignments:

San Jose PD

Channel 1 460.150 Western district D R & V
Channel 2 460.275 Western district F & N
Channel 3 460.200 Foothill district M & W
Channel 4 460.425 Foothill district C & P
Channel 5 460.400 Central district E & K
Channel 6 460.325 Central district L & S
Channel 7 460.475 Southern district A & T
Channel 8 460.525 Southern district X & Y
Channel 9 460.100 Citywide 1
Channel 10 460.025 CLEMARS
Channel 11 460.050 Citywide 2
Channel 12 460.025 CLEMARS direct (simplex)
Channel 13 460.175 Tactical 1 Special Events (simplex)
Channel 14 460.300 Tactical 2 Training coordination (simplex)
Channel 15 460.375 Tactical 3 (simplex)
Channel 16 460.100 Citywide 1 direct (simplex)
Channel 17 460.250 Special Events cache (simplex)

The frequencies for Campbell PD are as follows:

Campbell PD

Channel 1 482.4625 Primary
Channel 2 484.2125 Tactical 2
Channel 3 484.7875 Tactical 3

The frequencies for Los Gatos PD are as follows:

Los Gatos PD

Channel 1 482.9125
Channel 2 484.8625
Channel 3 484.6875

The frequencies and talkgroups for the City of Santa Clara can be found at the following URLs:

http://www.trunkscanner.com/states/ca.html#Santa Clara
http://home.att.net/~wwhitby/ca.htm

1954. looking for a modification for older scanners

Newsgroup: rec.radio.scanner
Date: 2001-01-23 02:05:17 UTC
From: Shadow Knight <shdw_knt@hotmail.com>
Message-ID: <94ioso$on3$1@nnrp1.deja.com>
Source record: 71352

Howdy.. I am wondering if it would be possible to modify a OLD 1980 bearcat scanner.. it is a model BC 210 (not a 210xlt just 210)

or if it is possible to modify a BC 60XLT that I bought at best buy about a year ago..

If it is not possible, what is the cheapest modificationable scanner out there??

I am looking to get higher then 900mhz (with all channels unblocked)

Please reply via email to:

Shdw_knt@hotmail.com

thanks..

32 Channel 5W Dual-band VHF/UHF Portable Radio The ONLY Dual-Band portable on the market today. The FTH-2070 combines both VHF/UHF capabilities in one unit, which eliminates having to carry two radios. Solid as they come, there is no better solution to dual band applications. Comes with battery, charger, speaker mic, keypad, buyer pays shipping, this unit is in great condition and works awesome but it is sold as is. We accept, paypal, Money orders, visa, master,discover,amex. buyer pays shipping pic shown is from yaesu web site. unit will do ham on both vhf and uhf. freq range is 136-174 and 400-499, email kc8ffv@home.com for more info

"coffee" <pet@nj.com> wrote in message news:3A6CD23F.1A4BED32@nj.com...
> Oh a " permanent cranial-rectal inversion" That is so clever.

Of course it is, ASSHOLE, but bright objects and yarn always have
fascinated you, haven't they?
On an intelligence scale of 1 to 10 (10 corresponding to the highest
attainable IQ) your rating is so far into negative numbers that one
would need to travel into another quantum reality in order to even
catch a distant glimpse of it. Your ears make you look like a taxicab
with both doors open.

If you can't live without me, why aren't you dead already?

> Did you get that from the little 4th grade boy who you are doing?

Quit projecting your gay lifestyle onto others.....isn't that why your
wife left you?
Look STUPID, I'll explain the remark TO you, since your mental
handicaps match your physical ones. YOU HAVE YOUR HEAD PERMANENTLY UP
YOUR ASS. That clear it up for you, Jethro? Good. Now, fuck off.

Hey, try it in English, and skip the Ebonics, welfare recipient. I know
that's all you hear, down there with your homeless friends, the ones
you stay with in the cardboard boxes on the street, selling
your "services".....but you're just a toxic-waste dump inbred from New
Jersey. You give New Jersey a bad name, fucknuts.

> What else can you tell us about myself?

You do it fine all by yourself, ASSHOLE.

> Are you actually a ham and talk to other hams on the radio?

Yeah, too bad you can't read well enough to study and pass the test.
But, I suppose it's best to keep the mentally impaired away from
electricity, since they already keep you away from sharp objects and
such.

Here in Pittsburg, KS, we have added mobile data computers to our patrol vehicles. The officers can now run tags and driver licenses from their vehicles, as well as communicate from car to car. However, we still rely mainly on the (analog) voice repeater for our communications. The effect has been great for us dispatchers in that the computers cut down on a lot of the routine traffic of running car tags for the officers. The good point is that people can still listen to our voice communications.

It will be even better when the Australian version is released, so
you can track the 800Mhz trunking sites properly. The US models don't
trunk 800Mhz the correct way for Australia. They also don't have the
service searchs the Aussie model will have, which will be UHF police,
UHF CB, Airband, marine band, Aussie rail band and so on.

2008. introduction to speech inversion descrambling!

Newsgroup: rec.radio.scanner
Date: 2001-01-23 13:13:45 UTC
From: ctpds49@aol.com
Message-ID: <20010123081345.21690.00000815@ng-mn1.aol.com>
Source record: 71305

Speech Inversion is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some
audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz
constituting the speech inversion.

2009. WinRadio Questions

Newsgroup: rec.radio.scanner
Date: 2001-01-23 13:39:32 UTC
From: Neil Young <ikswokjok@hotmail.com>
Message-ID: <MPG.14d7a7ffbf61cff8989684@goliath2.usenet-access.com>
Source record: 71306

I have a US WR-1000i. Absolutely love it. One question I have is, does anyone know if the blocked freq's is actually a hardware block or is blocked in the software used to access the card?

Question #2: Ok, I have a bit of knowledge of radios. I have dealt with HF recievers that had a screen where you could actually see like a meg or so on each side of your center freq as you are tuning. Kinda help ya move over the shit and see signals as they pop-up withn an "X" mhz width view. At work we called it a spectrum analyzer. Set center freq, width, then go nutz. I have the Spectrum Analyzer with the WR Digital Suite. This appears to be more of a signal analyzer. ANy ideas on whether a)this is a signal NOT a spectrum analyzer and b) if there is something out there, third-party or otherwise that I could use to acomplish this.

Question #3: Also anyone have any leads on central european frequency lists?

TIA

Neil

2010. VR-5000 and AR-5000 (was Re: Anyone know what happened to this AOR AR-5000 info site?)

Newsgroup: rec.radio.scanner
Date: 2001-01-23 13:56:01 UTC
From: "Mark J. Bailey" <mjb@jobsoft.com>
Message-ID: <3a6d8ee5@news.isdn.net>

Hi

Thanks for trying! Someone had saved it and emailed me a copy (although it did not have the images saved). The comparison was interesting.

I don't know if you follow the AR-5000 group on eGroups, but I posted recently that I had originally bought the Yaesu VR-5000 but returned it as intermod (while not unexpected) was MUCH worse than I had expected. I guess I had hoped that it would have been more like the IC-R8500. Anyways, I shipped it back and bought the AR-5000B+3. No regrets! I am very pleased! The VR-5000 has a lot of nice features and I think is a fine radio value for the money. It is definitely high end of scanners. Which I think is important to note. Scanners are for just that - scanning and finding signals. It is not as important for a scanner to have a highly rejective (is that a word? :-)) frontend (IMHO). But, I realized that I wanted a clean receiver most of all. Again, the VR-5000 is a good value with lots of features for the money - but it is not the receiver of the AR-5000 (nor even the IC-R8500). I did get a chance to play with the Icom IC-R8500 so I have actually played with all 3.

I think if Yaesu had made the frontend (and thus the receiver) more filtered, then (while probably costing a lot more - closer to the IC-R8500), I think the IC-R8500 would definitely be more threatened. I think I would have payed more for that too. Having played now with the AR-5000, I think it even more safe from being threatened by the VR-5000 (in its class). In the VR-5000-level class, I think it is a good radio. It was a *fun* radio to play with. I don't think anyone comfortable in that class of radio will be disappointed. I just came to the conclusion that I wanted to hear signals that should be there any mostly not that shouldn't. I will tell you that 4-6 MHz suffered badly (at least here) from AM station overload (mostly the local stations)! It was unusuable IMHO - but HF is not the VR-5000 greatest strength. What was more disturbing was that I seem to have most of my regional FM broadcast band imaged 13.6 MHz up the dial (spilling into the AIR band). That was MOST annoying. I could understand the local power house, but some stations were 60+ miles away. Now, on the AR-5000 - this is non-existant in BOTH the 4-6 MHz and AIR band. There is still a little pager intermod in 143+ MHz but there is a transmitter hill a few miles away. But even that was SUBSTANTIALLY less than on the VR-5000.

I don't want to rain on anyone's parade - this is just what I experienced. It was enough for me to decide against the unit and eat the restocking fee. So, your mileage may vary (of course) but go figure - you get what you pay for. Yaesu had to reduce costs somewhere (esp in the light of the very nice

added features) and that was apparently on the frontend.

All-in-all, decide what is more important and get your hands on both if you can. As I said, the VR-5000 is a fun radio. So, don't take what I am saying here as gospel - one might find that pros out-weigh cons on the VR-5000 and it be a fine radio to own. Many others have decided that and that was one reason I was driven to buy it in the first place. Many are QUITE happy with it. I was one who had a big CON that made me decide otherwise. I will add that in that price range, I would take the VR-5000 over others in that range that I researched! So, if that is a factor for you, then you should seriously consider the VR-5000!

FWIW,

Mark

Hi,

Does anyone know where you can find mods and/or URL(s) on mods for the AOR AR-5000? I have the AR-5000B+3.

Thanks,

Mark

We all are waiting for markj Net Cop to help get rid of all the cross posting.
It has been in the past the job of CAL to complain about Mackey.
Due to the cross posting I find it hard to read the Mackey threads now.

I found out how to do it, just hold down the 2 and 9 keys, and then turn
it on, that is all there is to it.

Two questions on the Pro-2052: 1. Does it track in the 400Mhz range and 2. What are some opinions on it.

I'm thinking about getting one, but I'v had no experience with it.

Any info appreciated.

TIA

2033. Yaesu VR-500 Hidden Menu Items

Newsgroup: rec.radio.scanner
Date: 2001-01-24 03:07:59 UTC
From: DougSlug <twinpoppa@hotmail.com>
Message-ID: <jGrb6.35373$GS1.4866908@news02.optonline.net>
Source record: 71330
Cross-posted to: rec.radio.scanner,alt.radio.scanner

On the Yaesu VR-500 handheld receiver: Has anyone been successful in making the hidden setup menu items #33 (Narrow AM) and #34 (User Port) visible? If so, how? Also, does anyone know what the User Port on the CPU is used for?

I know it's either tricky or impossible, but is there a way to unblock the holes in the 800 MHz band (includes "legal" freqs where cell images are picked up) on a USA version? I'm convinced that it is possible through the User Port or power-up key sequence (or something else perhaps), but the service manual or schematics have not revealed any good clues to me.

If three specific frequencies are entered in the Smart Search memories (1:L):1250.375, (2:S):123.125 and (3:U):448.250, the unit is put into a special S-meter and squelch alignment mode. Is there any significance to these frequencies? Could a different set of frequencies in these memories trigger any other setup modes that might be used to configure blocking? What might they be?

Doug

Hi, can't help you with your problem but would be interested in you opinion of the VR-500 as I am in the market for a scanner and can't decide between the Alinco DJ-X10, Yaesu VR-500 or Icom IC-R3 (like the look of this but not sure if I can do without the ssb/cw modes).

Yes.

>and 2. What are some opinions on it.

There are obviously more than one set of reactions to this unit. I've had one
for over a year, and I like it. It does what I need it to do and I use it
every day. It isn't my only receiver, however.

2040. Reset keys for PRO-43

Newsgroup: rec.radio.scanner

I have a dead PRO-43 that I got used. Someone suggested a series of keys that can reset the CPU. This sequence did not work, but it also did not work on my friends working PRO-43. Neither of us have the manual as we got them used.

What is the proper method to reset the unit?

Thanks

Sunil

Most computer virsuses are geared a a certan operating system. This is why Linux has been mostly immune to viruses. Scanners don't have the smarts to get infected. As for cell phones. The computers that control the cell antenna's are more at risk then the phone it's self. There has been one Palm type virus that I know of.

2049. PA [Emergency] Sit Rep e-mail list

Newsgroup: rec.radio.scanner
Date: 2001-01-24 17:41:33 UTC
From: PA-Sit-Rep <PA_Sit_Rep@yahoo.com>
Message-ID: <94n44a$f7p$1@nnrp1.deja.com>
Source record: 71248
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,alt.radio.scanner

PA-Sit-Rep is an e-mail based Emergency
Situation Report mailing list designed
to keep all of our e-mail list subscribers
up to date on emergency situations and
activities of MAJOR import throughout
the state of Pennsylvania.

PA-Sit-Rep list enables subscribers
to monitor situations throughout the
State of Pennsylvania including major
weather emergencies, natural disasters,
environmental disasters, police and
military activities (major emergency
events and exercises only), civil
disturbances and political developments
(ONLY OF THE MOST MAJOR IMPORT).

Subscribers are encouraged (but not
required) to send reports to the list
pertaining to any of the above
activities.

List membership consists entirely of
volunteers. The list runs from a
private server at the domain name owner's
own expense and there is absolutely
no advertising or junk mail permitted
on the list.

The PA-Sit-Rep list is extremely low
volume because posts are limited to
messages pertaining to Pennsylvania
emergency situations only of the most
major import. Posts to the list are
extremely rare with the exception of
the weekly test post.

The PA-Sit-Rep message format was
designed to accommodate subscribers
using text-capable handheld devices
such as alphanumeric pagers, PDA's
and text capable cell phones. If
you're the user of one of these
devices, you will have the ability
to receive posts from the list while

you are away from your computer or
on the road.

For more information or to subscribe,
please visit the PA-Sit-Rep web page:
http://www.1stpa-militia.org/sit-rep.htm

Or you may subscribe by sending an e-mail
to: pa_sit_rep@yahoo.com

Put the word "Subscribe" in the subject
line and the e-mail address you would
like to have subscribed in the message
body.

2055. Mysterious Signals - Can You Hear It?

Newsgroup: rec.radio.scanner
Date: 2001-01-24 22:03:35 UTC
From: Roger Williams <nospam@nospam.net>
Message-ID: <3A6F5137.3DFF7E80@nospam.net>
Source record: 71254
Cross-posted to:
rec.radio.scanner,alt.radio.scanner,alt.radio.amateur,rec.radio.amateur,rec.radio.shortwave,rec.radio.amateur.misc

I was reading this in another news group and hear the signal described -

Some very mysterious transmissions seem to have started about 2 weeks ago. This mysterious interference consists of short, 1 second bursts of data packets described as "vibrating noise". While there are no reports yet from other areas of the country, it is very possible that it can turn up anywhere at any time. It is most prominent in the North Eastern area of the country, particularly around the NY, NJ, CT (Hudson Valley) region, and has been noticed by many radio enthusiasts residing in Orange County NY. The most notable frequencies are 40.55 and 169.765 during the day (10 am - 3 pm is prime time), but occur everywhere and anywhere between 30 and 400 MHz - 24 hours a day, seven days a week. The data burst noise appears to change frequency for no reason, landing on frequencies allocated to specific police, fire, and ambulance services for a few seconds, then continue on to other frequencies only to return again a little while later. It always sounds exactly the same every time. These mystery signals also seem to transcend through the AM, FM, and WFM modes. All the usual suspects such as paging, radio stations, cable TV and satellite, links, telephone and utility lines have been eliminated as the source. The interference is equally present in urban and rural areas alike. Nobody can peg the origin - the signal is everywhere... but nowhere.

Anybody know what it is?

Go ahead and give a listen to the frequencies listed above, you will definitely hear it within a few minutes of plugging in those two frequencies. I receive it loud and clear on my base scanner and it only has the little stock antenna attached!

Oh don't get your shorts in an uproar Glenn. I'm a
ham and own both ham and commercial gear. Disregarding
price, the commercial gear is built better, has better specs,
and yes, looking at both, the ham gear is junk. (with
a few exceptions)

And I can get used commercial gear for far less money
than ham gear, and use it both for commercial and ham
frequencies. And used commercial equipment still holds
up better than new ham equipment.

BTW, Earthlink sucks. And the West coast is in the dark, litterally.

No uproar here Steve, you made the statement "It's not ham junk. It's a very expensive radio." not me. I find you a very funny and entertaining man.

I also am a ham and have a decent station. I don't consider any of my equipment "junk". You are trapped in your own words with no out. Pretty funny.

Glenn

BTW I know Earthlink sucks. Isn't that why you throw away your money to them? Only time it has been dark here is when the sun sets or was that a weak East Coast insult? Steve with another swing and a giant miss! You remind me of some red assed people that seem to center in the Boston area for some reason. Ring a bell? :-)

BC780XLT Software Commands?

I have written simple TurboC software to (1)program
and (2)control my BC-895XLT scanner as well as my
PRO-2052.

My plan is to modify it to (at least) program my new
BC-780XLT. However, I am unable to find the software
commands in the supplied "Operating" manual.

Can someone tell me where to find these commands?

Thanks, Brian

That's fine, but you guys are crossposting this to the rec.radio.noncomm
group, where we discuss noncommercial broadcasting in the 87.9-91.9 MHz
portion of the FM broadcast band, and your ham junk isn't type accepted
to work there.

In case you're a US citizen, Jim, I'll note here that if you're buying a new scanner and want full 800 MHz coverage, you'll have to purchase it outside the USA. Any new scanners sold in the USA have to by Federal law be designed and manufactured so that they can't be converted to receive analog cellular calls, so that portion of the 800 MHz band wouldn't be available to you. But I don't suppose you were interested in wasting your time listening to those calls, anyway.

Could this noise be caused by the recent flare-ups in solar activity? We've had a few coronal mass ejections lately.

Now that everything is going digital, cell phones, police freq's, fire/emergency, etc, is there any device that can scan these freqs (i mean interpret their signals, not just pick up digital crap)? I asked uniden if they had one, or had one in the works, and they said they were planning on releasing one in the future. If that's the case, then the technology is out there. Are there any plans or schematics anywhere on how to set up a scanner that decodes digital? danke

I've got a lot of freqs (un-catalogged), let me know what towns you're
interested in, and I'll see what I can come up with.

Also, go here: www.theramp.net/shabec/carma.htm it's the best site
for the Chicago area.

Happy Scanning!

Even if Uniden came out with something..what type of digital coding would it work on...regarding the cell phone example, there are a few digital methods used for cell phones..so even in Canada and other places where cell phone scanning is legal, one would be hard pressed to have a scanner that could decode the different digital cell phone methods..TDMA, CDMA, iDEN and GSM etc.

You will then find a list of doccuments.

Each of these is a section from the manual:
"Features"; "Hints & Tips"; "Special Features";
"Specifications"; "Troubleshooting"; "Operating";
"Manually Storing Frequencies"

If you download all of them you will have the owners manual;

or you can order it: The order number is MU2000412.

Yup, I wrote two distinct sentences, two thoughts.
You assumed they are one. The sentence regarding the
price of the radio was written because the radio is for sale,
and this input may help someone regarding how much the
radio is worth.

Nowhere did I say or imply that it is a good radio due to
it's higher cost. This is something you did. Typical internet
reading of something that was never written. Then you bring
ISPs and geography into it. You just took it all personally
and are on the attack. Seen it a million times.

Could be. There is also something as old as the Earth called diatherming that occurs in the atmosphere. Have you ever heard that washing machine sound that moves into your CB channel (example given because most people at one time or another have listened to noise on chicken band in their lives), then ruins it for communications, and then drifts up or down to another channel for a while, later leaving the band? That's the atmosphere, expanding and contracting, and doing unusual things to RF that is passing through it. What you're hearing is likely that or some similar atmospheric phenomenon.

Or them damn aliens... :-)

Hope this helps.

Regards,

Doug Gavilanes
Garden Grove, CA.

HAHAHAHAHA! So instead of saying $xxx.xx new or a value of $xxx.xx you write "It's not ham junk. It's a very expensive radio." Keep barking scruffy! Someone will believe you.

> Nowhere did I say or imply that it is a good radio due to

CDMA is not just digital, it is digital spread spectrum. There is no
way to decode it. Forget about it, ain't gonna happen.

There is no "schematic" in the sense that you ask. Yes there are
diagrams of DAC, digital to analog converters, digital signal
processors, etc. but that's the easy part.
Analyzing the signal, looking at timing etc. is the difficult part.
This is logically different for different signals.

Can be done but, as is posted here on regular basis, no one has yet...

Hello,

I am looking for ANY information on the Heathkit Model MWW-23 Marine Radio Transceiver. What I know is that it covers 2-3 MHz and BC Band RX. I am possibly looking for a manual and/or schematics. Any help would be great. I also need to know if this operates off of an external power supply or what voltage it operates off of (Direct)?

I have the rig apart, and I am almost certain that it has a built-in power supply. Also, judging by the PA Tube being 12DQ6, I would say that it runs off of 12/13.8 VDC. Any help would be nice. You may Email me or call me:

E-mail: radiotek@pacbell.net
Phone: (661) 272-6949

Thank You & 73,

Mike KQ6MU

When I was in the Army a few years ago, they were switching all their com equipment to SINCGARS. And these machines were decoding digital. Also, I understand your point about the different types of encoded digital, but a scanner is merely a receiver. There's one of those in every digital cell phone. What's so hard about making a scanner that will scan the range of the various types of encoded digital transmissions?

I work for the JMU football team, and we use the exact same system TELEX CoachComm that NFL uses.Yes they are TELEX, and the NFL gets paid buy Motorola to use their headsets for the advertisement value. They are encrypted. We have had teams that we played with exactly the same system and we tried to use their system to see if it could Rx our system It was a mutual experiment by both of us. When another unit was powered up on the same setup it just went into a fail-safe mode and neither system would transmit or Receive. Kinda spoils your weekend Huh!

I picked up the Police Calls book from Radio Shack, and proceeded to punch in *all* the freqs they list for the cops in Rockford/Belvidere/Cherry Valley/Loves Park/Winnebago/Boone county...

Now it seems to me I have probably wasted a lot more channels than I am actually going to hear anything on. Does anyone out there have a good, succinct list of freqs, and maybe a description of what they are?

Are there any websites dealing with this part of the state? I've seen a bunch for Chicago area and Central Illinois but nothing up in Rockford. (If there aren't any, I feel a new project coming on uh oh....)

Anyway, any help would be appreciated !

the
> various types of encoded digital transmissions?

Scanning them is one thing. DECODING them is quite another ! Many types of encoding are virtually impossible to break. For instance, you could try for the rest of your life to decode a transmission made using 32-bit encryption, and 32-bit is old hat now... Most of the newer stuff uses 64-bit encoding. Then, there is the problem of the ever-changing encryption key, which means that if you do manage to decode it, that will only hold until the next time the encryption key changes, which may be as little as 60 seconds. Both ends of the link - up can be programmed to change this code at regular intervals, using pre-defined keys. They can also re-define keys at will. A scanner that would decode this type of stuff would cost more than you or I would want to pay for it ! You may have a few scanners that can do trunking, and other stuff that follows a known format, like MDT, but you can take my word on it. Other forms are gonna get tougher and tougher to decode. Besides, it is currently illegal here in the states to decode such transmissions, so you are not likely to see any of the major scanner manufacturers openly build a scanner that is capable of this type of "Swiss Army Knife" decoding, since they would be in flagrant violation of the law, and would never get type approval for it. It would literally "Never see the light of day".....

It`s not encrypted, The system you are describing is probably Motorola MDT, which is decodable in some cases. You would need an interface to decode it, but this stuff is not usually "encrypted"....

Antennas AND sensitivity, is more like it. The further out in the boonies you are, the more sensitive your radio needs to be and the higher and better your antenna (and coax) needs to be.

Good sensitivity means .25 microvolt or less, and good antenna is something like a Grove Scantenna or rotatable beam, as high and in the clear as you can mount it. (You cant get it high enough, so don`t worry on that score).

National Incident Notification Network

Do you listen to police, fire, EMS radios? Do you like to know what is going on before hearing about it on the news?

Well NINN is for you then. NINN is a group of people from around the country that listen to police, fire, EMS and other radio frequencies to bring you the latest, and first hand report of what is going on in your area via Email, or by Alpha Numeric pagers.

Dispatchers and Administrators Needed

Do you want to make a difference in what the "people of your area hear" Are you interested in working with a system, and group of people that want to make a difference?

Our system, and policies help you make that difference, so you can get the real news out there. NINN Doesn't have 1 person making the decisions, it has a board of directors of 5 persons making the decision, and many more on the support side of our program. No more weeks of waiting for an answer from support.
This is a Free Service, All You have to do is log on to http://www.ninn.net enter your email or pager address and start receiving Alerts
Immediately after entering your address , no forms, no approval, You will be Informed of in Progress Incidents as the happen,
NINN is in need of Dispatchers Throughout the United States, at this time all States are not in Active Status if You would like to become
A Dispatcher, a short Application form is available here
http://www.ninn.net/dispapp.html as NINN Administrative Support is Incredibly Efficient, within a brief period You will receive Your Dispatch ID # and then you become part of the Action!
Links for NIMM eGroups by Region are enclosed, To find your Region click here http://www.ninn.net/regional/

Can't hear it in San Jose California.

My 1st wild ass guess: A foreign military satellite drifts out of position to a spot over the US East Coast.... Satellite thinks it is at home and tries to communicate with ground stations....

I don't believe even the black parts of the US government would use frequencies allocated to local police & fire services. That makes the transmission foreign. Spies want their burst transmissions hidden. So, I figure it is not spies, because of the obvious patterns and heavy use that you are monitoring. The only other thing I can think of is Foreign Naval Vessels in the Atlantic. However, I would not expect the highband or UHF transmissions to go very far inland, and direction finders or beam antennas would have localized it to the East by now. So, I exclude Foreign Navies. All that leaves is satellites.

Idea 2: Actual transmission is on legitimate government or military frequencies, but your radio seems to pick it up on public service frequencies due to receiver flaws.

Yes, we have been hearing strange signals here in southeastern Massachussetts. We have had our scanner set to the same local area police channels for about 10 years and have never heard this mysterious noise. The weird signals started in early December 2000 and sound a lot like morse code only much faster. The signal lasts only about 3 seconds at a time.

Maybe I haven't done enough DXing but the data traffic I hear when I am scanning the shortwave frequencies is more of a screaching or chirping sound. This new and mysterious sound on the VHF scanner is much different

Unfortunately, it is likely to be a group of White racists, or a
major drug dealer group. In whicgh case, as far as PR goes, "The semi
solid excretory material _will_ impact the oscillating, rotary air
movement device," for the rest of us. The "public" will demand all
kinds of "restraints," and it will be d--n hard to stop.

I've got a very wild idea if all the guys hearing it are in the same general area. Cable TV systems use sweeping equipment that cover this entire spectrum. Normally its a rapidly triggered sweep, rapid enough to not interfere with the video being delivered.
My understanding of some of the modern equipment, is that the tech in the field can zoom in on certain frequencies by remote-controlling the sweep transmitter for different rates, etc. This could explain increased activity at certain frequencies if they are trying to troubleshoot something at that particular point in the passband.
But, on the logical side, if you don't have any other evidence of cable leakage at the normal cable TV carrier frequencies, there's no reason why the sweep should be leaking out of the system.
With the use of fiber optic linking, some cable companies are covering upwards of 100 miles radius from a single headend.
Check to see if you hear any of the video carriers, and if so, that might be the answer.

Nothing hard about that at all... in fact, what we're talking about here is activity on the same frequencies
we all know and love (to scan). But, just because the receiver can receive the RF signal doesn't come close
to giving you understandable audio. You'll just hear noise (if the squelch even opens, because on digital systems that use a *wide* signal, the squelch won't even open).

CDMA is not even in the reasonable realm of possibility (for the simple reason that, besides being very difficult, anything we're likely to see that we could afford needs to be legal to buy so that the developer can sell lots a lots of them without legal interference). That kinda rules out TDMA and its cousins GSM and iDen, too. The one type of digital modulation which we are likely to see a decoder for is APCO Project 25 digital. Being an open standard, the specifications are at least out there for everyone to see. It won't be simple, though... and it likely won't be cheap. But it will make a lot of the public safety scanner folk happy.

Between 100 kHz and 500 kHz you'll find aircraft beacons (either with slow code or with automated terminal weather reports) and, on quiet winter nights, with a good antenna, you might be lucky enough to hear some of the european broadcasters who use 200-400 kHz and do what we do on AM 550-1600. When I'm in France and get lonely for some english, I tune my car radio to 280 or so (yes, it goes that low!) and listen to the BBC - you can receive it halfway into France during the daytime, and farther at night.

Private party selling one Code 3 RVM series vehicle dual warning light. Retails for US$200.00, I am asking US$120.00. Manufactured 9/9/99 with original factory boxes, mounts, and instruction manual. Includes suction-cup mount and unused adhesive mount for rear deck or dash. Guaranteed to be 100% operational like new, flash pattern selectable with internal jumper switch (change it in less than two minutes with a screwdriver). This dual light has a strobe on the left and a super-bright halogen flasher on the left, email me if you want to see a photo. Includes full red lenses and one hald clear lens (lens set available at Gall's for about US$7.00). Fits by your rearview mirror for front warning power or unobstructively on your rear window or rear deck. Email with questions please as I do not read all of the newsgroups. Thank you!

2125. BC245xlt or BC895XLT?

Newsgroup: rec.radio.scanner
Date: 2001-01-26 02:38:51 UTC
From: rlb915@cs.comthwart
Message-ID: <20010125213851.18687.00001364@ng-fg1.news.cs.com>
Source record: 71223

I'm thinking about getting into computer controlled scanning and I've narrowed the choices down to the Uniden BC245 handheld or the BC895xlt desktop. The question is, are they equally computer controllable? From what I've read, the BC895 has more of a computer interface and therefore would be more computer oriented. But several of the control software programs say they control the BC245 too. Are the two comparable or is one better than the other for computer scanning? Thanks.

Hi Neil,

It is, (I am told) a processor block. Inside the processor, no jumpers or software that will unblock.. My 1500i gets real good images around 1300 or so, but I don't know if you model tunes that high...

#2 It is a spectrum analyzer in that it sweeps through the frequencies displayed and plots the signal strength on the graph... Not the best in the world, but that's basically how all spectrum analyzers work...

#3 Not a clue...

If NINN gets enough attention, it just might become a test case for USC Title 47, Section 605(a). You know, the one that reads:

"No person not being authorized by the sender shall intercept any radio communication and divulge or publish the existence, contents, substance, purport, effect, or meaning of such intercepted communication to any person. ... This section shall not apply to the receiving, divulging, publishing, or utilizing the contents of any radio communication which is transmitted by any station for the use of the general public, which relates to ships, aircraft, vehicles, or persons in distress, or which is transmitted by an amateur radio operator or by a citizens band radio operator."

Yes as a matter of fact I do. I will be more than happy to take any of that
cash you don't know what to do with and a kidney if you can spare one. Both
will be put to good use.

Thanks again pal!

Glenn

Yes, life sucks when the ISP does. I am lucky to be in the most wired city
in the country.

2145. BC780XLT - help wanted with the offset channel / base frequency / spacing freqency

Newsgroup: rec.radio.scanner
Date: 2001-01-26 10:07:59 UTC
From: MedicMedic!! <eerstewagen@hetnet.nl>
Message-ID: <3a714be1$0$14527@reader4>
Source record: 71244
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner

Hi,

What is the use of the "Offset Channel for Motorola VHF/UHF Trunked systems?"

On Schiphol Airport the police is using a Motorola Smartnet II system. I know all the frequencies (448.8500 / 448.9000 / 448.9875 / 449.3250 / 449.6000/449.7750 / 448.8500 & 449.9750 Mhz.), i've found out the base frequency (448.8500 Mhz.) and the spacing frequency (12,5 Khz.) and I use "CH380" for the offset channel. The BC780XLT is tracking the system perfect!

When I change the offset channel in 381, 390 of 600 (for example) the scanner is not tracking the system. There is no explaination in the manual about the offset channel. How do i know wich offsetchannel to choose?

There is an other Smartnet II system. I've not yet tried tracking this system. This system is using 171.0700 / 171.2100 / 171.4500 / 171.6900 & 171.7500 Mhz. I think the base frequency is 171.0700 and the spacing frequeny is 5, 10 or 20 khz (is this correct?). But what is the offset channel? Is there a way to find out the values for the base- and spacing frequencies and the offset channel?

Thanks,
Edwin - The Hague - The Netherlands

CDMA phones need and use their ESN numer to decode the signal for example.
CDMA phones do not transmit the ESN but the ESN is need to hear the call
etc. the phone uses the ESN numebr to help assemble it etc.

>Have you considered getting a BC780?

Yes, but I am mulling over the pros and cons of all three. There's no trunking in my area yet (but there could be in the near future). Not sure if I want to spend the extra money on a BC780 until I find out how many users are going digital.

Just out of curiosity, are the cell frequencies banned in Mexico? Could someone in the USA get one there and sneak it across? Do they have scanner sniffing dogs at the border? :)

Source record: 71150

Or lack thereof. I keyed in all of the trunking frequencies used by the Tulsa and Broken Arrow police according to the directions in the manual but am still not receiving anything. This is a busy metropolitan area so there should be plenty of activity. I'm not real convinced that the data signal is being located since I can't tell from the display whether it is scanning for the data signal or actually scanning the frequencies.

Any ideas?

Thanks,
David

I've read some posts about this radio on rec.radio.shortwave

One person had one, and sold it complaining that the documentation and support was poor. He seemed to think Fairhaven might be one guy and a student programmer.

Another person mentioned owning one, but he's said nothing significant about it.

I wouldn't rule it out based on one complaint, but it's probably not a mature product, so if you buy one soon, you should probably expect a wait for software enhancements.

I do hope they get things sorted out though, as it seems like a radio with a lot of potential.

Regards,

Mark

Because they have always used it. It works well for them. Just because we don't use it the U.S. doesn't mean there's anything wrong with it. There are lots of broadcast stations in europe in that range.

'Long Wave' on 153 to 279 kHz AM - see
http://www.geocities.com/rf-man/spectrum.html

- which gives a good idea of the sort of thing going on under 500kHz
and above 1.3GHz in Europe.

Why can't you have a receiver hooked up to a computer and have the computer convert the digital signal to analog voice where scrambling is not used but simple analog to digital transmission is used like cordless phones.

They say it's against the law to go 56 mph in a 55 mph zone. Does anyone know of ANYONE who's ever been prosecuted, sucessfully, for listening in on cell/cordless phone conversations? Also, if it ever came down to it, you could just claim you were scanning a wide range of frequencies and just happened upon the particular "illegal" transmission. Oh well, I don't have to worry about my calls being listened in on. I use an old tech hardline all the time!

Palm Beach County, FL, (yeah, THAT Palm Beach County) put MDTs
in sheriff's cars in the early 70s. The original idea was that they
would dispatch all the calls on the terminals. That concept died a
quick death.

The deputies hated it. They wanted to hear the call because
they could tell a lot about the nature of the call by the tone of the
dispatcher's voice. The helicopter crew was particularly frustrated
because they were out of the loop unless they were specifically sent
on a call. They might be flying routine patrol near an area where
something was going on and they'd never know it.

Today most calls are dispatched by voice and the terminals are
used primarily for records checks.

If you're only talking about MDTs, I doubt that you'll see
much decrease in traffic other than records checks.

Hmmm...ignoring an off-topic post isn't the point. The point is whether the rules already set for each group is going to be followed. If everyone posted binaries to non-binary groups -- what's the point in having binary groups??

Faqs and rules MUST be followed on Usenet and if one doesn't like it, one should start one's own group.

Actually, this isn't a scanner newsgroup -- it's a shortwave newsgroup. Kindly edit your cross-posting.

I hate break your bubble, but most of the newer cordless phones use encryption....

Try decoding some MDT transmissions, then brag about it. They are not "encoded".. But the feds will be having a little talk with you, nonetheless....

What about that couple from Florida that tape recorded Newt Gingrinch's conversation? I believe they were slapped with a $500 fine or something. But they were stupid for recording it in the first place. If they wouldn't have recorded it or told anyone, they wouldn't have gotten caught.

Other than that high-profile case, I've never heard of anyone being prosecuted for listening in to cellular or cordless phones.

> Oh well, I don't have to worry about my

I use an AT&T digital cordless phone.

We're planning on dispatching calls via MDC some time in the future. I'm
not sure at this time if I'll like it or not, but right now I think it would
be best if we stuck with dispatching via voice.

At any rate, we'll still need to use voice for when the officers are on
scene and out of the car.

ANYTHING that can be received by an 'authorized' receiver can be
received by an 'unauthorized' receiver. It might be difficult...it
might take time and effort and money...but it CAN be done.

NEVER say anything on a telephone (cordless/cell/PCS/landline) that
you would not shout over a bullhorn in a crowded public place.

Well, did you hear a data stream when you were loading the frequencies in?
If not, the trunk you're trying to monitor definitely won't come in very
well (if at all).
DUH!

Can someone throw one of these in his car, hook it up to an external antenna, and drive under some cell sites to give us a report? You also might want to drive under some VHF or UHF high power TV antennas as well.

Thanks

Chris

Recording it was not the problem. Telling someone else what they
heard was the problem. Have you ever bothered to read the manual
that comes with your scanner, they all state that what you hear over
the scanner is for your enjoyment only. Listening to what the police
say is not illegal, talking at the local water fountain or coffee shop
about what you heard could get you in big trouble.

>
> Lets find out what your ISP thinks of this [snip]

Do you really believe that the average ISP gives a darn what is said in these newsgroups? My ISP, like most ISP's, has a stated policy against censorship of any kind. In fact, I'm sure most ISP's are so fed up with silly complaints, from self-styled newsgroup censors, they simply trash such nonsense without even reading it.

But, even if they don't trash the complaint, what good do you think you're doing? If an ISP boots a person off because of complaints, it would only take a matter of minutes for the person to have another account with another ISP. For example, there are almost two dozen ISP's in my area, not counting the national ISP's. So, in the end, your efforts don't even rise to the level of a minor nuisance.

And, in the process, your complaint leaves youself wide open for a libel lawsuit. If challenged, are you prepared to prove in a court of law that the person you complain about is actually a racist (or whatever)? The courts have always given wide latitude to words under the 1st Amendment, so mere words, taken from a newsgroup, are not likely to prove your case. Of course, in reality, lawsuits like this would be very rare (as I said, this isn't even a minor nuisance), but there is nothing to stop such a lawsuit if the person wants to make an example out of you (and a name for himself).

However, you're free to do what you want. I, on the other hand, would be very cautious about sending a complaint such as this.

I just got my ass kicked by a patrolman for playing my scanner radio real load near a crime scene. I played it through my car speakers as a hostage situation was unfolding. Apparently the guy killed himself while they were trying to talk him out. I think he heard the cops making fun of him on their raidos. Do I have a case? Am I entitled to any money in a settlement?

Or even better post it at:
alt.binaries.radio-scanner
This under used news group should be throbbing with unknown signals.

Record the signal on the PC as a WAV file, compress it with Zip and
post. Then we can all give our pennies worth

Mike

Are you simply trolling? If this *really* happened the way you say it did, I'd kick your ass, too. And again, if this a true scenario, how do you feel about causing the death of another human?

As far as 'do you have a case', yeah, probably...as a defendant in a wrongful death case.

Well, if thesignals are so clear and easy to predict and receive, why don't you guys with really good rigs and directional/adjustable antennas triangulate on the signal and pinpoint a transmitter location? That way someone can physically go out and check the location. That would surely answer the questions with regards to "who" is transmitting.

That is interesting. Does this mean that when a sideline's headset
fails
and the other team has to turn their comms off that the culprit *could*
be someone in the stands messing around with the same setup? That never
occurred to me, but based upon your post, that could happen. Am I way
off base?

How mobile is the unit. Are there any problems just taking it to the car and setting it on the seat after you hook it to the power in the car? I've been SERIOUSLY considering getting one. I hear all good things, no bad, well, not a whole lot of bad, (sound) and it's making it to easy to drop 350 for one. I'd like it to sit on my desk, but when I go to work, I don't want any restrictions on taking it in the car with me. And no, the solution wouldn't be to buy two:)

They were stupid for making a recording of what they heard, then sending it to various people with an explanation of what it was. If they would have just listened and then gone on their merry way without telling anyone, they wouldn't have been fined. Even recording it wouldn't have gotten them in trouble if they hadn't given it to anyone.

Listening to your local police isn't illegal. Listening to cordless or cellular telephones is. But unless you go around blabbing about doing it, you're highly unlikely to ever be caught.

If you want some funny stories, talk to your local PD dispatcher. I'm sure they could tell you some stories about bizarre behavior if they've worked there any length of time.

We had a family in our town call 911 because they were having trouble breathing. We thought it was carbon monoxide poisoning until the officers arrived on scene. It wasn't CO. What happened was the family had set off two bug bombs in their house & then went to bed, not realizing that you're supposed to leave the house for about four hours. That alone was funny, but the REALLY funny bit is that a year later, they did the same thing again!!!

One night a guy called up, drunk out of his mind, and reported that someone stole his house. A couple nights later he called up (still drunk) and reported that they brought it back.

Somebody might mention to this idiot that what he is doing is a violation of Federal as well as many state laws and that somebody just might report him to the FBI if he doesn't stop. Many of us listen, but to go and blab the details is just plain stupid!

As to your question, there are no scanners capable of rendering digital signals into analog at this time. Regardless of that, the likelihood of anybody besides some high power government agencies (NSA and/or CIA for example) having the capabilities to track a spread spectrum unit is very slim. This phone sprays it's signal all across a frequency range, not staying on any one frequency for more than a few milliseconds, so you'd have to be able to follow the signal as it jumps. No two phones will jump in the same order, it's done at random.

Then there was the one about the guy that called 911 one night to report that his car had been partially stripped. Thieves had stolen the dashboard, steering wheel, gearshift lever and foot pedals. A few minutes later he called back, this time displaying symptoms of intoxication, to cancel his first call and apologize for bothering the police. He had gotten into the back seat by mistake. Guess where he spent the night?

Oh, get real. I simply responded to your post with regard to what server you are using. Your headers say that you are indeed using windows (the Forte Agent listed is a windows app), and that you are 8 hours behind Zulu time (translates to PST). You need to get better control of your headers before thinking that you are "anonymous."

You seemed to think that you were well hidden and you're not. Do something illegal and Altopia will cough up your identity and originating ISP in a flash. They've done it before and will doubtless do it again.

In the meantime, posting as "anonymous" is wishful thinking.

Does interfering with a police officer in the performance of his duties mean anything to you?
Does putting the officers and innocent bystanders outside or near the incident at risk mean anything to you?
Do you think that the suspect actually heard your scanner (was it loud enough)?
Do you think (if it was loud enough) that you might have had something to do with the suspect killing himself?
Do you think that you didn't deserve the attention of the police on scene for what you did?
Does the word "stupid" mean anything to you?

There isn't an attorney worth his practice that would defend someone like you. Notice that I said "defend". You don't have a case for anything but a lobotomy. Your scanner should have been removed from your vehicle by the police and returned to you up your ass. Your stupid act (which you never explained your reasons for doing in the first place - for fun, maybe? to pretend that you were "undercover"? there's just no good reason) could have caused this incident to go bad. I wouldn't want a poor bastard's suicide on my conscience for the rest of my life. Common sense would tell you that you should never broadcast what is being communicated on police channels to the public. There are laws against that. And it's wrong. Even through speakers. If the police on scene wanted or needed to hear their radio traffic on scene, there's a switch position on their cruiser's PA systems for that. But they were blowing it out their PA's, were they? Why do you think that TV crews don't zoom in with their cameras on live police incidents involving barricaded suspects and SWAT teams? They don't because the suspect might have the TV on, and might see where the SWAT members are positioning themselves, enabling the suspect to fire on them. You're lucky that the police didn't charge you with anything. You just made it harder for anyone with a scanner to get along with the police in your area, fool.

Crawl back under your rock.

A publishing company called CRB Research offers some phony callsigns for
people who are unlicensed. It is a way of adding some credibility when
you're trying to verify (QSL) a station.

Besides specifying it as a Telex/CoachComm model, Pete's post
unfortunately doesn't make a lot of sense in terms of it going into some
sort
of 'fail-safe' mode. An opponent's setup shouldn't be on the same
freq(s) or
have the same cipher-code.

See: http://www.coachcomm.com/ucsys.html

As for the unit's frequency or frequencies, it seems like they'd be
licensed
to the team, and not to the NFL, NCAA, etc.

Package Includes:

-PRO-2006 400ch Scanner- Considered by many to be Radio Shack's finest offering to date. May even be the best scanner of all time.

-Optoelectronics OS456 full version computer interface

-Scan*Star Plus for Windows v6.43 (original license, original disk, update disks and manual)

-Original telescoping whip antenna

-Serial cable for computer connection

-Original PRO-2006 instruction manual

-Copy of Service Manual and Service Manual Addendum (Parts 20-145 & 20-145A)

-Original Owners/Installer manual for Optoelectronics OS456

-Original Packaging

-I am original Non-Smoking Owner

If you've wanted computer controlled scanning this is your chance. This package works great and looks great. 9 out of 10 cosmetically and 10 out of 10 functionally!

Get in quickly, this auction will end at 4:40pm eastern time on Superbowl Sunday! Plenty of time to bid before the people arrive!

2251. Simi Valley, CA Scanner Frequencies and trunking

Newsgroup: rec.radio.scanner
Date: 2001-01-28 00:58:56 UTC
From: Mike Burden <mburden@my-deja.com>
Message-ID: <94vqsdmpf1@nnrp1.deja.com>
Source record: 71048

Does anyone know of a good resource for scanner frequencies other than http://www.freqofnature.com/ for Simi Valley, California area? Specifically local law enforcement, utilities, school district, etc... I checked RadioShack's Police Call frequency guide vol.9 2001 edition but the information they have has been the same since vol.9 1995. I have been able to gather a few frequencies here and there but not a whole lot. I have not found any mention of trunking being done in this area but I only have one reference. I guess my next stop would be to stop by the local pd and just ask. If I never ask I'll never know.

Thanks in advance for anyone that replies to this posting

Glen,

I did not think it happened either, and I did not address his comments directly, as they deserve to be ignored.

My point was that it is unfortunate that folks of this low mentality are involved in the hobby, and whether they are joking or not, their silly comments lend fodder to those who would ban scanners from public use.

For sale:
PRO-26 25-1300 MHz coverage, minus cell, but with VDC for sale which looks like brand new, with original antenna, belt clip never installed, manual, box, and all packing like from the factory.
On top, there is a toggle switch for the virtual down conversion. I was told that you can hear some good stuff thanks to that. I have no idea what ;-)
I will take $200 + insured shipping (about$10) FIRM
Can e-mail photo of the radio. Let me know if you are interested,

Ardyno

City_Slicker wrote:
>
> Stew your cross posting to the CB NG is going to
> cause your ham groups much grief. Are you going
> to continue?

Son, I responded to an existing thread that had
already been cross-posted to the CB newsgroup (on a
topic of interest to all newsgroup users - complaints
to IPS's), and I'm sure that at lease some of the other
replies in this thread are from others in your
newsgroup (just like your message is - crossposted to rec.radio.amateur.misc).

So, to answer your question directly, I will continue
to post where I want, when I want, and on any subject I
want. It is neither your business, or your job, to
tell me to do otherwise.

Now, if you want to complain to my ISP about my use
of rec-radio.cb, I'll be glad to supply them with a
long list of people they can contact who can verify my
many years of citizens band radio use in this area
(which means that I have just as much of a right to
post to rec.radio.cb as you do).

But, even if that was not the case, it is still none
of your business what I do. So, I strongly suggest
that you back off, worry about your own cross-posting
to other newsgroups if that is a big issue for you, and
let me tend to my business.

By the way, if you want to "cause grief" to the ham
groups, that is your business. But, don't try to blame
your bad behavior on me, because I'm following
newsgroup rules. If you want to violate those rules,
than that is between you and the people who complain to
your ISP.

Good day, City Slicker.

Source record: 71067

I recently purchased a Panasonic 2.4 Ghz cordless phone (model KX-TG2670N). Panasonic claims that it is digital spread spectrum but there is a button on the handset to change the channel if interference is encountered. I thought that spread spectrum meant that the transmission channel changes rapidly in a random order. If my understanding is correct, what would be the purpose of a channel change button on the handset?
Doe anyone have any experience with this phone or have a recommendation for a secure cordless phone?

Thanks,
Ed

And since it's "them," it would be easier and smarter for them to simply tap your phone line instead of trying to listen to your spread spectrum phone, in case you switched to a hardwired phone. The average Joe won't be tapping your phone, nor listening to your digital/spread spectrum cordless phone on his scanner.

That version of the Panasonic 2.4 Ghz phone is suppose to be much more secure than it's predicessor (model KX-TG210-S). The older Panasonic 2.4 Ghz (model KX-TG210-S) could be picked up with a conventional scanner if you are within 200 feet of the handset and cand also heard in the 463 & 464 Mhz range (928 & 927 Mhz / 2).

I own the older version and have confirmed that it can be heard in the 463 & 464 Mhz range (very weak but in the clear).

I would think the OWNERS manual would tell you if there was a BATTERY and how
to
replace it. Don't have the manual..
you should be able to download it in PDF format from several of the AOR sites
AOR UK has several of the owners manuals on their site.

My scanner's FCC ID is AA020-300A with a serial of A007908.

According to information I have seen, this would not be modifiable. Some of the weblinks say that my particular PRO-43 can't be modified for cellular, but I am interested in 72 MHz. Does anyone know if my 43 can be modified for 55-88 MHz?

Please respond to djmiller@zzz.com

Thanks

Darin

The original Panasonic 2.4 Ghz phone (model KX-TG210-S) also transmits a much weaker analog signal from the the handset to the base unit. It can be clearly monitored from up to 200 feet away with a conventional scanner. I've told that the second generation (KX-TG25## series) do not use this method and are much more secure (they are fully digital/spread spectrum).

BTW, the Base Unit is the only component that transmits on 2.4 Ghz. The actual handset still transmits in the 902 - 928 Mhz range.

Hi Mike,

You may want to check out the following publication from Bob Kelty:

Government Radio Systems Central Coast Region for 2000

It covers the following counties and has a pretty good detailed section
for Ventura County (County Seriffs Dept, County Fire, State Military &
Industrial Fire, EMS, County Utilities, Municipal Systems, etc)

Monterey
San Bentio
San Luis Obispo
Santa Barbara
Santa Cruz
* Ventura
State and Federal Agencies for the above counties

If you're interested in obtaining a copy, then you can contact Bob
directly at the following:

Mobile Radio Resources
1224 Madrona Ave
San Jose, CA 95125-3547
408 269-5814 Voice
408 269-5811 Fax
kelty@tcomeng.com

Please note that his e-mail goes directly to his fax machine so you
will NOT get a reply via e-mail.

Please note that a PDF version of this publication can also be obtained
from "Ed Tobiasz" <edt@accesscom.com>

Hope this Helps

Bob

From: submit@sylvanlake.net
Message-ID: <3a744733.39275474@news>
Source record: 71084

Can anyone recommend a good resource (besides APCO itself) for details on APCO-25? I'm thinking about trying to develop a software-based decoder.

Is it a narrow or wide channel? Can I get accurate raw data off the discriminator tap? Is it FSK or PSK? Is it 4-level, 16-level, or something I am completely unfamiliar with?

I've been studying DSP and picking apart decoders for other formats, and so I think that, with lots of coffee and a good strong punching bag (and a few months work), I might almost be ready for the big time.

Did you remember to set the squelch full clockwise?
Did you put each system in a different bank?
Sure you programmed Tulsa as Moto II (E1) and Broken Arrow as
EDACS (Ed-in LCN)?
Put the the radio in manual and step through the channels one by
one. if you don't hear the data channel you don't have one programmed
and re-check the freq info.
If you see it scanning freqs it's looking for the data channel.
Once it finds the data channel you should see dashes across the display
and a ID when you receive a transmission (page 52 of manual).

My Pro92 displays all talk group IDs exactly 16 off from where they are supposed to be.

For instance Fire is suppoised to be at 720, but my Pro 92 shows up as 736. The same is true for every talk group.

I am sure my list is right.

What can i do? I'm sure the clowns at radio shack won't understand or beleive me.

Yes. The first generation (model KX-TG210-S) of the Panasonic 2.4 Ghz cordless phones handset does transmit in the 902 - 928 Mhz range. I'm not sure about the second generation (the KX-TG25## series) of these cordless phones, but I'm pretty the handsets transmit in the 902 - 928 Mhz range also.

I've been using a Siemens Gigaset system with three handsets for the past year+ and have never had any complaints at all about voice quality, unless of course I tried to use it standing next to an operating microwave - and at that, I had to be within 3-4 feet. I've tested operating range to well over 300 feet outside the house to a base station inside.

Overall I've been very pleased with the system - it also makes a great baby monitor.

I haven't tested it yet, but I've also read that these phones interoperate nicely with 802.11 DSSS wireless ethernet systems. I'll be trying that in the not-too-distant future, hope it's true!

From what I've seen in the past on this NG, Panasonic has been less then open about the actual operational characteristics of this phone. I hesitate to use the word "liar", but they have (apparently) bent the facts around pretty badly. I'd recommend buying a different brand.

I don't know, but you've got to admit it does make a good story. As Andrew says, there are a lot of not too bright people out there.

One I can attest to, though. I used to be a 911/radio dispatcher for the local PD. The city had no public transport of any kind, and our cab company went belly up. There were/are many elderly/handicapped people who needed transportation to get to the doctor, store, etc., so the City Commission decided that the PD should transport these people whenever possible. ("911 Emergency and Taxi Service - May I Help You?") One Friday night about 1:30 AM, I got a call from some obviously drunk man wanting a ride home. I kept trying to explain to him that if we came and picked him up, he wouldn't be going home. But no, he insisted I send an officer to take him home, the city commission said so. So I sent the officer, fully briefed on the situation. Needless to say, the guy DID NOT get home that night!

Is there anybody in the Byers, CO area who is listening to the radio traffic regarding the plane from Okla. State Univ. that crashed there last night? The plane was carrying some players, staff, and broadcast people back to here in Stillwater, OK from the OSU - Colo. basketball game yesterday. The NTSB go team was to arrive this morning, along with an FBI forensics team to assist in recovery of the remains. The whole community has been hit hard by this, and I was hoping to find out some more information.

Thanks in advance,
Mark

Why not look here?

There are people selling scanners here.

I just got a 'like new' PRO-92A for about $150. Great scanner. Far
less then what the shack wants for them. Also, I *AM* trolling this
group looking for other PRO-92s, because I *might* want a second one
as a 'beater', so some scratches, lost manuals, etc. might be OK if I
could get another good deal.

The questions is: why do you care (fact you even posted twice about
it), why did you bother looking at this thread...

Probably nothing. Why would anyone go trolling through Usenet looking
for a
current model scanner unless they wanted something for nothing?

Try Radio Shack - they're still selling the PRO-92.

I forgot to mention two other sources:

If you're looking for frequencies in Canada then you should check out
the TAFL site at http://spectrum.ic.gc.ca/tafl/tafindxe.html

If you're looking for ATC frequencies then you should check out the
AirNav site at http://www.airnav.com/

2324. Q: Uniden AC adaptor- incorrect voltage?

Newsgroup: rec.radio.scanner
Date: 2001-01-29 00:21:31 UTC
From: netengr@pclink.com
Message-ID: <3a74b77b$0$7161$9ba61822@news.pclink.com>
Source record: 70972
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I had occasion to measure the output of my AC adaptor for my BC9000XLT today- it was about 17.5 volts (says 13.8 on the adaptor). I then measured the voltage output from the adaptor for my BC590XLT and it was also about 17.5 volts (says 12VDC on the adaptor). Thinking I might have a bad voltmeter, I measured a few new 1.5 and 9v batteries and got correct readings. Anyone else have higher than normal output voltages from their ac adaptors?

Any input appreciated.

Thanks.

netengr@pclink.com

That URL has been invalid for sometime now. You should be
able to get to most of the old Live feeds via the following URL:

http://search.broadcast.yahoo.com/search/bcst?p=Live+Scanner

Dallas County Sheriff's Live Scanner Frequencies
Dallas Fire Department Live Scanner Frequencies
Plano Police Department Live Scanner Frequencies
Dallas Police Department Live Scanner Frequencies
Los Angeles Police Department Live Scanner Frequencies
New York Police Department Live Scanner Frequencies
San Diego Police Department Live Scanner Frequencies

You can also use APBnews.com to access other Live feeds:

http://www.apbnews.com/scanner/index_blank.html

You can also use Live365.com to access other Live feeds:

http://www.live365.com/home/index.html

You need to follow the setup and installation instructions
for this site to work. Once you've done that you can enter
a search for the keyword "Scanner".

Sure....the typical wall-wart is a fullwave bridge into a cap with NO regulation. Rule of thumb for this kind of supply (under no load) is 1.414 X RMS value. 12volts X1.414= 16.98 volts more or less. It goes down when you load it. Measure it while the scanner is in operation or better yet use a small analog (or switching) regulated supply....Eddie

These are the broadcast frequencies for KRON-TV 4 (NBC) in San Francisco

450.4125 KRON ENG News
450.4375 KRON Engineering

These are the broadcast frequencies for NBC Network News Nationwide:

161.7600 NBC Network New primary
450.1125 NBC field portable repeaters

I don't have any frequencies for KBHK-TV 44 (UPN) in San Francisco

Your best chance of finding them would be search the following
frequencies ranges:

161.6400 161.6700 161.7000 161.7300 161.7600 166.2500 170.1500

450.0000 Mhz through 450.9875 Mhz with a 12 khz step
455.0000 Mhz through 456.9875 Mhz with a 12 khz step

2341. Re: OT? Garmin GPS Plug?

Newsgroup: rec.radio.scanner
Date: 2001-01-29 04:39:13 UTC
From: Eddie Haskell <harleybum@easyriders.com>
Message-ID: <Rt6d6.115108$y9.23105869@typhoon.we.rr.com>
Source record: 70988

The data connector on most if not all GPS's is usually referred to as the NMEA connector. It's complete name is NMEA-0183. On some of the Garmins its a 4 pin round rubber plug about 3/8 inch in diameter on the others (like the E-Map) its a 4 conductor inline fitting that both provides data I/O and external power.
Do yourself a favor, due to the weird "footprint" they have stay with the factory cables....no (ooops) to worry about...Eddie

Source record: 70991
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Most "wall warts" (plug-in power supplies) are not regulated. The voltage output must be measured at the rated current load. For instance, if it says 12 VDC at 500 MA, then the pwr supply would put out 12 VDC only when loaded at 500 MA current draw, Less load = higher voltage, more load = lower voltage. The radio generally has some form of regulation stage built in, the wall wart only supplies a rough approximation of the needed power.

Kind of ironic. Insisting on following USENET rules, when the majority
of posters on this newsgroup routinely violate (and openly encourage
violation of) FCC rules with regard to radio operations.

People who do not respect the rules of one service are not likely to
respect the rules of another either. A consequence of modern
society.....

The first and second generation giga range phone transmit fm; 900 from the handset; 2.4ghz from the base. They are not digital, and not really spread spectrum. If you push the channel button, you will be frequency hopping. Your understanding is better than the marketing division of Panasonic's understanding. They made many claims for their giga range phone, most of them false. There was a web page that talked about this, and how Panasonic toned down their claims for the 2nd generation phone, on www.ablecomm.com--I think. I think they may have moved the page. Call them at ablecomm.com and they will give you the facts.

Not really any advantages, except that it gives you something to put on letterhead when writing to stations requesting a QSL. I got mine before I became a ham and still use it just because. They're more likely to be found in SWL circles than scanner groups.

Check out www.crbbooks.com/affiliates_2/monitor_station_registry.htm

Open the radio unit up and locate blue wire.
Cut the blue wire then hold down the function
button while powering the radio up.

If this fails to work, return unit to Radio Shack
and tell them you did the mod exactly as the guy
said on the internet but now it doesn't work anymore
and you would like to have your unit replaced with a new one, preferably one
that is better then what you currently have but wish not to spend any
additional money on paying for the better unit.

I did this and it worked for me without a hitch and I got a free battery to
boot!

Yes! Soak the scanner of your choice in a bucket of sea water for two weeks. Remove and allow to dry completely. You have now modified your scanner to be a paperweight (hand held models) or a doorstop (base models). This will work for any scanner, guaranteed**

**not a guarantee.

I have a UBC 3000XLT that I haven't used in about a year. I picked it up today only to find out that the battery won't maintain a charge. Is there a way to repair the battery? If not, could someone suggest an online retailer that would carry this scanner's battery (Sanyo Model BP 2500 600mAh 6.0V).

If possible, please cc via email.

Thanks,

amando

Hello,

I am looking for the frequencies that SDG&E (San Diego Gas & Electric) uses. Used to have a book that had them however I think I misplaced it. I believe they are using an EDACS system, and need to be programmed in a certain order? Any help would be appreciated.

Thanks

Cleaning out the 'shack to buy some different gear. Have the following scanners/radios available for sale. (ALL are in absolute MINT/AS-NEW condition both PHYSICALLY and ELECTRONICALLY unless otherwise noted, with supplied accessories as noted for each one)..:
1.) PRO-2052 trunktracker.Does Motorola and EDACs.1000 channels.Lots of features.Retails for $369 In 'Shack catalog.Includes everything EXCEPT box. MINT.Low use (less than 4 hours total!)..... $250 (specs in current RadShack catalog)

2.) Bearcat BC-9000XLT "alphanumeric" scanner.500 channels.25-550 and 760-1300 Mhz (minus cell:('virtual conversion' can be done..will provide info IF requested...).Auto-store and MANY other features.Less than 15 hours use.Mint/ AS-NEW. With box and all accessories.Retails $349-$369 new!.....$255

3.) Sony ICF-SC1PC handheld scanner.NEW IN BOX! (Only removed to test for proper operation.)25-1300 Mhz (less cell, restorable)."Service search" features:selectable modes and step sizes.(no SSB).Includes all factory accessories & software disc.NEVER USED!.....$180

4.) Regency MX-5500 desktop scanner.25-550 Mhz continuous.20 channels.Selectable modes and steps.Superb sensitivity on milair band.One VERY light, nearly invisible mark on outer case side.Otherwise, in excellent to mint condition.Works superbly. Speed mod professionally done as is noise mod. A very nice radio for those not needing 800 Mhz.Includes power supply and antenna (no box or manual).....$85

5.) AOR AR-2515 desktop/mobile scanner.2000 channels.25-550 and 760-1300 Mhz (full coverage w/ cell).Very fast scan/search rate.Resembles the AR-2002 and 3000 in appearance.Selectable modes and steps.Perfect/MINT condition with box and all accessories.Light use (probably 18 hours total)Sold new for nearly $800.....$480

6.) Regency MX-7000 desktop/mobile scanner.25-550 and 760-1300 Mhz (including cell).Same features as MX-5000(above..) plus 800 Mhz.MINT with box and all accessories.Sold new for $399. Easy use(less than 22 hours total).Speed mod and noise mods professionally done. Excellent sensitivity and selectivity on all bands.....$185

Again, ALL radios are MINT/ AS-NEW unless otherwise noted.Please..NO trades or 'offers'.These are all my "personal" units and not just junkers for 'resale', so I KNOW they are as stated.Payment by MONEY ORDER ONLY! (Will accept personal check IF you dont mind 15 day waiting period for clearance.)<:
Kindly include $12 shipping EACH (except $ 7 for Sony)for FULLY-INSURED,WELL-wrapped, PRIORITY MAIL shipment.Radios will be sent SAME or VERY next day I receive your M.O. (again..checks WILL be held until clearing bank...sorry!)Email me directly with any questions.If multiple radios are

purchased at the same time, can give slight break on shipping charges.
THANK YOU and Happy Scanning ! Larry W. (Klarrg@aol.com)

San Diego San Diego Gas & Electric Company is using an EDACS system.

These are the frequencies for that System.

856.150
856.300
857.150
857.300
858.150
859.150
859.175
860.150
860.175
860.425

Not sure if these are in LCN order.

Yep, that is the point I was trying to make. You might not be able to
hear
but I get the impression that you could cause "denial of service" by
"trying"
to eavesdrop. Is this true?

If it is true, how many cases are know of this happening? I have seen
several
games where the sideline headsets go out and the other team has to
surrender
theirs as well to be fair.

Bruce

Does anyone have any experiences--good or bad--with importing foreign models of scanners (i.e., cellular unblocked), particularly the Icom IC-R2? What, if any, is the potential risk from a legal standpoint of doing this? I see on their web page that Bandercom readily exports European models to the U.S. Does anybody have any specific experience with Bandercom?

Doug

Right now they are broadcasting on both the new (800) and old (450) freqs
for mutual aid type channels such as Red. After all cities make the switch
and the bugs get worked out, 450 will go silent.

I did some poking around the FCC database this evening and came across
the following licence application for the XFL (actual name XFL LLC).

http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/uls_site_res.hts?db_id=19&link=&application_id=619558

These frequnecies are licenced for the following cites which can also
be found on their web page at http://www.xfl.com/tickets.html

Birmingham, AL (Birmingham Thunderbolts)
CHICAGO, IL (Chicago Enforcers)
EAST RUTHERFORD, NJ (New York/New Jersey Hitmen)
LAS VEGAS, NV (Las Vegas Outlaws)
LOS ANGELES, CA (Los Angeles Xtreme)
MEMPHIS, TN (Memphis Maniax)
ORLANDO, FL (Orlando Rage)
SAN FRANCISCO, CA (San Francisco Demons)

461.0375
461.1125
461.1625
461.2375
461.2875

It should be interesting to see if they're encrypted.

There are three rules for scanning:

1. Don't repeat what you hear.
2. Don't profit from what you hear.
3. Don't interfere.

You broke rule #3.

They should've tossed your sorry ass in jail, imho.

From what I've heard, Javiation is your best bet for a good price on the Yupi
MVT-7100.
They are presently selling 7100's for about $290.00 US.

> You have a Pro-92 version 1.0, and it is exhibiting ID Wobble; a well

Wrong. He said nothing about the IDs changing during transmissions. He did say that they were all "off" by a constant value.

The correct answer is probably that the list he is using is based on true Motorola IDs, or on some other numbering system that requires an additional conversion step to the format used by the PRO-92 (and incidentally by the Unidens as well).

A useful question to ask is, Are you able to track these talkgroups on any other scanner using the numbers from your list?

EVERY PROBLEM experienced by a PRO-92 user IS NOT "ID wobble" or "defective" scanners!

I have the "oldtimers" Mod, its easy! Open your scanner and locate the memory back-up battery. Clip the wire and remove it. For this mod to work well you have to unplug base scanners, or remove the main batteries from hand-helds frequently. The more channels you have the better it works!

Hi NG

I'm not using my Bandercom Yupiteru9000 M3 with Discriminator Output.

It appears as new, with original Antenna.
Almost never used.

Specs: http://bander.com/export/specs.htm#MVT-9000
More info at http://www.bander.com/export/mvt9000m.htm

The round NMEA connector also is used to supply power to those units using
that connector.

SHINWA SR001 (full cell)
This receiver is one of the best looking receivers ever made.
You can see a picture of this one here:
http://www.webdeals.net/scanpix/swsr001.jpg
That is the actual picture of it.
Condition is near new.
I sold this to my broth-in-law and he doesn't have the time
or willpower to read the manual and program this complex receiver.
I got it back and I'm offering it for the price of $275 plus $5 shipping
before it goes on eBay.
This receiver isn't your average scanner. It even has a remote control.

Comes with box, manual, mobile mounting bracket (never been mobile) and
remote control.
Let me know if interested because its going on eBay Wednesday night.

Also selling a Yamaha RX-V955 AV receiver. Top of the line audio video
receiver.
I need $500 out of this one. Perfect condition! Shipping will run $20 cause
this sucker is HEAVY.

Tell you what I found at RS that seems to work well for me. Since I have cup holders right in front the seat under the radio in my Dakota pickup, I found a cup-holder mountable cell phone holder at Radio Shack. Has adjustable cushioned "jaws" and I've found that it fits well and holds pretty securely. I can then just pop on the connector for my antenna and the power and speaker out all right there. Keeps it at a good viewing angle or able to operate by feel....Found it on sale for like $9.00

I believe that you meant to write 460 (as in the subject line), not 450 (media band). Does anyone know what frequencies are in use on the 800 band for the new APCO 25 system that OCPDs are moving to? Does anyone know the radio models that will be used?

Just a couple of questions...

Regards,

Doug Gavilanes

Anyone have the CD set that they don't use, don't like, or just want to sell?

Let me know.

Thanks.

I have an old one, but, I will tell you... Unless they changed the format (which I understand they have) it isn't worth 2 cents as far as I am concerned. I do remember (it's been a long time since I used it and it was the first version) that there were restrictions on how I could print out the data, supposedly to protect them from illegal copies, etc... but, it wasn't fair since I couldn't customize my list like I wanted... I could, but, could only print ONE PAGE at a time... S L O W.
Anyway, unless someone tells you they've really improved it, I wouldn't buy it.

No idea. It's interesting that their licence is still in progress as of
today. Their first game is this coming Sunday.

http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/uls_lic_res.hts?db_id=19&rows=25&sndx=XFLC&radio_serv=

http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/uls_call_res.hts?db_id=19&callsign=&type=L&application_id=619558

I've heard that they're planning on having all types of wireless cams
and wireless mics in use during the games. It would be very interesting

to bring ICOM R-3 to one of these events.

I did some poking around the FCC database this evening and came across
the following licence application for the XFL (actual name XFL LLC).

http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/uls_site_res.hts?db_id=19&lin
k=&application_id=619558

These frequnecies are licenced for the following cites which can also
be found on their web page at http://www.xfl.com/tickets.html

Birmingham, AL (Birmingham Thunderbolts)
CHICAGO, IL (Chicago Enforcers)
EAST RUTHERFORD, NJ (New York/New Jersey Hitmen)
LAS VEGAS, NV (Las Vegas Outlaws)
LOS ANGELES, CA (Los Angeles Xtreme)
MEMPHIS, TN (Memphis Maniax)
ORLANDO, FL (Orlando Rage)
SAN FRANCISCO, CA (San Francisco Demons)

461.0375
461.1125
461.1625
461.2375
461.2875

It should be interesting to see if they're encrypted.

Hi,
Does anyone have any ideas for interfacing a modem to a cordless phone?
I have a Panasonic KX-TG2500.
I live in Australia and there are hardly any cheap wireless
networking\modem solutions.
Thanx,
Rob

> that one 3 out of 10 for originality and wit.

I was not attempting to be a "smart-ass", as much as I was attempting to address a simple matter of someone picking nits, over a comment that was made as an observation.
While it is true that USENET is an international forum, the plain truth of the matter is that the U.S., by far, dominates the discussions on this newsgroup, hence the comment about "FCC rules". But if you apply the name of whatever rule making body that regulates radio communication, in your respective country, then the comment is still valid.

> >I'm sure THEIR rules are being just as arbitrarily broken as well.
>
> I wouldn't be so sure if I were you. The Radio Communications Agency
> appear to be an awful lot more proactive than the FCC when it comes to
> enforcement.

So, your assertion then, is that there are countries out there that actually ALLOW the use of 1KW+ power outputs, and the unrestrictive use of frequencies not allocated to their equivilent of the CB band? Somehow, I really doubt it.

> By the way, I have yet to see any message id's to support your
> original claim. Care to post the ids of the multitude of messages
> supporting your argument?

What the hell are you talking about? My "original claim" was that I found it ironic that there were people on here that were touting USENET "rules" , and how we should abide by them, while these same people, for the most part, routinely ignore FCC (Or whatever communication's agency regulates your version of CB) rules. I don't need any "message ID's" (whatever THAT means) to "support" what is nothing more than an observation on my part. If you doubt that there are "rule breakers" out there, just read the majority of message threads, and the subject matter

contained within them.

I have a wav file of it. What's the best way for others to access it? post it here or send it to those who request it?

I've got an old PRO-2034 scanner that I mainly use to listen to aircraft. I was searching for a frequency and I got distracted. When I came back it had locked onto 48.84. I think it is my daughter's cordless phone. The reception is clear but it sounds like a cassette player on ffwd or an Alvin and the Chipmunks rerun and the conversation is unintelligible. Can I do anything to correct this?

Thanks in advance.

2458. Swap Yupiteru MVT-7100EX scanner

Newsgroup: rec.radio.scanner
Date: 2001-01-31 20:52:04 UTC
From: Brian <bri172@hotmail.com>
Message-ID: <959ttmouc1@neptunium.btinternet.com>
Source record: 70856

Hi,, I have the following that I would like to swap for a home-base scanner with SSB or home-base shortwave receiver with SSB. My reason for swap is I am getting on in years and my eyesight is struggling a bit with the readout on the handheld radios :-) A picture of this scanner can be seen at http://www.wsplc.com/products.html
This is where I copied the text below from.

MVT-7100EX Yupiteru Scanner
* 100kHz -1650MHz .No Gaps. FULL 800/900mHZ Coverage* AM/LSB/USB/NBFM/W/WBFM
* 1,000 Memories * 500 PASS Channels * 12 Steps * Scan speed 30 Ch per sec.
* Sensitivity AM 0.5 V 10dB S/N * Current 140mA * Current (standby) 100mA * Save Mode <10mA * Size 64 x 155 x 39mm * Weight 320g
* Supplied Accessories: 4 x AA Ni-Cads, AC charger. mains adapter, 12V DC cigar lead, Telescopic antenna, Earpiece, * Belt clip, Carry Strap

The MVT-7100 is just not a scanner it is a complete communications package in one very compact hand-held. Not only does it cover up to 1650MHz it also covers the complete short wave band and the medium wave band. The SSB feature offers proper upper and lower sideband with a true detector. Now you get all modes and all bands in a unit that you can take anywhere. Whether you listen to aircraft, marine traffic, ham radio, broadcast etc.
It cost 209.00p UK Pounds 3 months ago and is boxed with all manuals and accessories, 9 months guarantee still to go. Also till receipt as proof of purchase and dated sales invoice.
I am willing to ship worldwide at my expense, other party to do likewise please.
thanks
Brian

Not for digital systems. I too live in a county that went digital and am
out of luck. Lucky for me that the big city nearby is still analog and
there is still enough action for me to monitor.

"seems" is not, always, the way it is......I would have thought that
someone with your highly tuned sense of humour would have seen the
irony in my post......especially with the "<g>" with which I ended my
post. I tend to use conventions like that so the anal among us don't
take me too seriously.
I assumed Kev would get it. He, usually, does.
I think your sense of humour is due for a manufacture's recall.
Whatever you do, don't let them bill you.....you were gypped. <g>

brianWE

I may not agree with what you say. But I will defend, to
the death, your right to say it. But I wish you would
say it elsewhere.

The cordless phone you are hearing probably uses voice inversion for increased security. There are other posts in this group that explain how voice inversion works. I believe there are also PC programs that can "unscramble" the signal, possibly even in real time using your sound card, but unfortunately I do not know what is available or where you might get it.

Oh, and by the way.....if you want to criticize anything I post, my
name is Brian. Not "some others". I THINK I was the only one, before
you, to respond to Kev's message.
If I missed the "others", sorry.

brianWE

Whoever it was who said "sarcasm is the lowest form
of wit" was, just, stuck for a clever comeback.

Noel, you have to set an example for him -- I'm reading your
comments on rec.radio.amateur.misc. If your response to me is
that you didn't know which group he was on so you posted to
all four groups, shouldn't that be his justification for
cross-posting, too?

Wednesday January 31 3:44 PM ET

Gossip-Seeking Robots to Roam Internet

LONDON (Reuters) - Virtual robots could soon be roaming the Internet to track down the source of spurious rumors or pornographic photographs.

Whether it's a speculator starting a rumor to move share prices or a pedophile supplying illegal images, RumorBot software will trawl through search engines and databases to find the source.

``The idea is to track and analyze, in real times, online newsgroups, chatrooms and lists,'' Stephane Perino of Agence Virtuelle told New Scientist magazine on Wednesday.

The Geneva-based company recently launched RumorBot which uses 44 software agents to track the source of a rumor by analyzing the time and location of each posting.

Some reason the Ham operators have a hard time with directing posts to the proper NG. This has no place at the CB NG. Probably can trace this one to Stewart too.

2481. Walmart has Uniden 20Ch handheld on sale for $40

Newsgroup: rec.radio.scanner
Date: 2001-02-01 04:52:35 UTC
From: Robert Barker <rbarker@austin.rr.com>
Message-ID: <nY5e6.150$tS.223919@typhoon.austin.rr.com>
Source record: 70880

I was in my local Wal-Mart today (south Austin TX) and in the automotive aisle I saw a handheld 20 channel Uniden (I think it was the 45XLT) for $40 on clearance. This is a very basic scanner and does not have 800 Mhz or any trunktracking.

Not a bad price.

Go ahead and try, City Slicker. The original poster was "rightwingradio@my-deja.com," which I assume was the one who added rec.radio.cb to the thread (I cannot verify this at the moment - the message has expired on my server and I don't feel like checking with Deja.com). So, for all I know at the moment, you're the one who first cross-posted this thread to rec.radio.cb.

Use the Waterfall plugin as your spectrum analyzer.
it's kind of slow but will let you see the past 30 minutes worth at a time if
you set it up right.

Some of the WR1000s were HARDWARE blocked but to unblock them was very risky
since the parts are darn near microscopic.
Finding a Block converter would be a safer bet.

can't help ya on #3

Neil Young wrote:

Poor 250sexless, posting from ameritech.net in Cleveland, OH

Hostname: adsl-dynamic5-184.cleveland.oh.ameritech.net
IP Address: 64.109.40.184
Decimal Address: 1080895672

---------------------------Whois Results---------------------------

Whois Server Version 1.3

Domain names in the .com, .net, and .org domains can now be registered
with many different competing registrars. Go to http://www.internic.net
for detailed information.

AMERITECH.NET
AMERITECH.NET

To single out one record, look it up with "xxx", where xxx is one of the
of the records displayed above. If the records are the same, look them
up
with "=xxx" to receive a full display for each record.

>>> Last update of whois database: Wed, 31 Jan 2001 11:44:50 EST <<<

The Registry database contains ONLY .COM, .NET, .ORG, .EDU domains and
Registrars.

---------------------------Arin Results---------------------------

Ameritech (NETBLK-NET-AIT-ADSL1)NET-AIT-ADSL1 64.108.0.0 -
64.109.255.255
ADSL Pool Cleveland (NETBLK-SBCIS-100828-145125) SBCIS-100828-145125
64.109.40.0 -
64.109.43.255

To single out one record, look it up with "!xxx", where xxx is the
handle, shown in parenthesis following the name, which comes first.

The ARIN Registration Services Host contains ONLY Internet
Network Information: Networks, ASN's, and related POC's.
Please use the whois server at rs.internic.net for DOMAIN related
Information and whois.nic.mil for NIPRNET Information.

> So I was wondering If they have moved to a trunked
> system or digital????

In regards to Arlington Heights scanning, several departments in
the Northwest Central Dispatch system have moved to a trunked digital
system. I'm not 100% sure of the status of AHPD but the link below
is for a Chicago area scanning e-mail list where you may find some
local answers:

2492. Searching User's Manual for the ACECO FC3002 Scanner

Newsgroup: rec.radio.scanner
Date: 2001-02-01 13:51:27 UTC
From: Werner Nussbaumer <w.nussbaumer@datacomm.ch>
Message-ID: <3A7969DF.9BFB534@datacomm.ch>
Source record: 70890

I'm searching for the user's manual for the ACECO FC3002 scanner. Does anyone know where I can download it (for example a PDF document)?

Thanks for any help,
Regards
Werner Nussbaumer

This is an older model tabletop scanner that I got at a rummage sale and could only test it to see if the squelch worked before putting down my $4.00 Do any of you know this scanner? I havent cracked the case, but none of the 8 red lights come on when it is activated and I cannot get reception. I would like to have some idea of what to look for before opening the case since I am not a scanner person beyond a weather alert radio. Any help would be appreciated. reply to rthayer@uno.edu
Thanks.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a team of G-men protect the president while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some models, like the early Uniden SportCats and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $1500 Icom R8500 and $2000 AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2042 and PRO-2006 base/mobiles, the Uniden/Bearcat BC895XLT, BC245XLT, SC200, and Radio Shack PRO-91 and PRO-94 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites. The ICOM IC-R2 and Yaesu VR-500 are the two smallest "pocket" scanners which perform. Both are tiny enough to fit comfortably in a shirt pocket so you can monitor without attracting undue attention.

Looking for value? At $170 discount price, the 100 channel Uniden/Bearcat BC278CLT base is a good value and available at most Sears and Best Buy stores. The Uniden Sportcat SC200 portable performs very well is an excellent value at its $220 street price.

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your

scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, http://www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance. The Premier (Prime) RD-9 and RD-9SMA are about the same length but even thinner.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas. The Austin Condor is available from Grove Enterprises.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter

and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A (available from Amateur Electronic Supply) or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is http://www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. Modifying any scanner to receive cellular phone signals is now considered illegal. By federal regulation, new scanner models must be designed to they cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the

Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (http://www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 7825 Black Street Rd., LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial

broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, http://www.grove-ent.com) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the

public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM. The PerCon Spectrum CDROM sells for under $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM, too.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)

dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes an extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an

invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

Other scanner mailing lists include: scanner@onelist.com, scan-l@onelist.com, scanner@qth.net, and sonofrcma@onelist.com.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about

4 PM. You must purchase a lunch since we get the room for

free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published on the CARMA email list, carma@qth.net. You can obtain a free electronic subscription to the CARMA email list. For more info, see:

http://www.qth.net

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Most meetings are be held on Saturdays at Phillies Pizza, 6300S. Kingery Highway, located in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook, IL.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner. The author writes a monthly
"Scanner Equipment" column for Monitoring Times magazine,
published by Grove Enterprises, but views expressed in this
article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies
is the Police Call Plus, published each year in 9 regional
volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM instead.

You can query FCC databases directly from this web page: http://www.fcc.gov/searchtools.html

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Other frequency web sites include:
http://w5gb.nmsu.edu/kc5kto/,
http://www.fordyce.org/scanning/, and
http://www.scannerway.8m.com.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'.

(See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of

information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army

Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each

equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals

weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

Uniden sells refurbished scanners dn you can check current inventory at their web site:
http://www.uniden.com/docs/store

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

You may be able to obtain manuals for older Midland scanners from:

Midland Consumer Radio Products
1670, North Topping,
Kansas City,
MO: 64120
Phone: 816-241-8500

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer the ICOM IC-R2, Uniden/Bearcat BC3000XLT, and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered at your local Radio Shack | store. Each Radio Shack store has a book containing | frequencies and stock numbers. The crystals are mailed to | your home within 10 days. |

You can also order scanner crystals from one of the | companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Crystals for Bearcat and other models are available from: *

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 2001 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation sells crystals, antennas, power cords, owner's manuals ($11 ea) for some older (pre-Uniden) Bearcat scanners. Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229, email: electra@tcon.net,

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553. You can also download an electronic copy of the user manual for recent Bearcat models from the Uniden web site:

http://www.uniden.com/docs/service/support.htm

Some schematic diagrams may be obtained from Uniden's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com) |

Multec Communications repairs several model Uniden | scanners, but not Electra models. (http://www.rfwiz.com or | email multeccomm@rfwiz.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Matt Roberds fixed a BC220 which experienced memory loss if power was removed by resoldering the positive wire to 2-AA battery holder.

As built, the BC220 logic board is grounded only through its mounting screws. In the BC220, Matt recommends adding real wire ground jumpers from the main board to the feature (logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig and Karl Klein repaired their BC210XWs by replacing the 22uF/35V C98 capacitor.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This display is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of

a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Matt Roberds repaired the Montgomery Wards version of a BC220 and contributed these insights:

"I did add some heat-sinks, but you have to be careful what you do with the TIP29 on the logic board. I added a long, flat heatsink to it and immediately created a whine in the audio. I didn't use an insulator, as this was a temporary first-try. As far as I can tell, the heatsink was radiating noise from the logic board into the front end on the radio board, which ended up being just below the heatsink. Bypassing the TIP29 (a voltage regulator) with disc ceramics didn't work; using a smaller heatsink and an insulator fixed the problem."

"There is also a 220 ohm 1/4 watt resistor on the logic board. It feeds the TIP29 from the main +16v supply. It looked a little crispy. I pulled one end and measured the current through it and it was about 30-35 mA. This works out to right at 0.2-0.25 watt dissipation. I didn't have a higher-wattage resistor, so I substituted 2 470-ohm resistors in parallel."

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to

switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855.

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

HAMFEST/COMPUTERFEST CALENDAR 2001 - ILLINOIS
last updated January 3, 2001

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, John Wass KA9QJX, Tom Harker, and ARRL for providing some of the information.

FEBRUARY 2001

Feb 4 (Sun): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Feb 11 (Sun): Tinley Park, IL - Giant Computer Show & Sale (see below). Tinley Park Convention Center, 185th St. & Harlem Ave. 9:30 AM - 3 PM. Adults $6, children $2.

Feb 18 (Sun): Tinley Park, IL - Giant Computer Show & Sale (see below). Tinley Park Convention Center, 185th St. & Harlem Ave. 9:30 AM - 3 PM. Adults $6, children $2.

MARCH 2001

Mar 4 (Sun): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Mar 11 (Sun): Tinley Park, IL - Giant Computer Show & Sale (see below). Tinley Park Convention Center, 185th St. & Harlem Ave. 9:30 AM - 3 PM. Adults $6, children $2.

APRIL 2001

Apr 1 (Sun): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Apr 29 (Sun): Arthur, IL - Moultrie ARK. 8AM - 1PM. Info: Ralph Zancha, WC9V, PO Box 55, Lovington, IL 61937. Daytime phone 217-543-2178 evening 217-873-5287. Email: rzancha@one-eleven.net Or write to M.A.R.K., P.O. Box 91, Lovington, Illinois, 61937.

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Tinley Park Civic Center, 185th St. & Harlem Ave., Tinley Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held on designated Saturdays from 9:30 AM to 3:00 PM. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, etc. Lake County Fairgrounds, Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall Building #1=9720,000 sq. feet. For a show map, exhibitor info, and discount coupon, visit the web site at http://www.ccxpo.com.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 - 2001 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)241-8742, or through your local Radio Shack store. You may be able to obtain some technical assistance from Tandy by calling (800)843-7422, option 2. The RSU (Radio Shack Unlimited) phone number is (800)-433-2024.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004, but Robert Cummings has modified an LCD from a Miller Engineering (http://www.microstru.com) experimenter's kit and fitted it to his PRO-2004. See http://home.cfl.rr.com/scan/Backlight.html for details.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the

squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad (PRO-43 keypad is RSU#10789808) may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A
crystal scanner are not working and the lamps for those
channels won't light, replace IC4 or IC5 (type 7400A).

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

You may share information with scanner collectors via the
"vintagescanners" mailing list at:

http://www.onelist.com/group/vintagescanners

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004
Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Jan 1996 - Plectron & Motorola Alert Monitors
Feb 1996 - Radio Shack PRO-2042

Oct 1998 - AOR AR8200 portable
Nov 1998 - Alinco DJ-X10T portable
Dec 1998 - Radio Shack PRO-91 portable Trunktracker
Jan 1999 - AOR AR7000
Feb 1999 - Radio Shack PRO-2066 mobile Trunktracker
Mar 1999 - ICOM RS-8500 software for controlling the IC-R8500
Apr 1999 - ICOM IC-R2 portable scanner
Jun 1999 - Mini-Circuits ZFSC-4-1 4-way passive splitter
Jul 1999 - Racing Electronics RE2000 portable
Aug 1999 - AOR AR16 portable
Sep 1999 - Uniden Bearcat BC245XLT portable
Oct 1999 - Plectron R700 series monitor receivers
Nov 1999 - Uniden Bearcat BC278CLT clock radio scanner
Dec 1999 - Uniden Bearcat BC248CLT clock radio scanner
Jan 2000 - Radio Shack PRO-92 portable scanner
Jan 2000 - Stridsberg Engineering FLT201A FM Notch Filter and
MCA-204 Receiver Multicoupler
Feb 2000 - Yaesu VR-500 portable wide coverage receiver
Mar 2000 - Uniden Sportcat SC-200 portable scanner
Apr 2000 - Understanding Intermod,
(comparison intermod performance of several models)
May 2000 - Radio Shack PRO-94 portable
Jun 2000 - Radio Shack PRO-2052 trunk tracking base scanner
Jul 2000 - Electra Tiger Scan TSA portable
Aug 2000 - Phone patches; Identifying scanner crystals
Sep 2000 - Radio Shack PRO-2067 trunk tracking mobile scanner
Oct 2000 - ICOM IC-R3 portable wide band scanner
Nov 2000 - AOR AR3000A wide band receiver
Dec 2000 - Alinco DJ-X2T portable scanner
Jan 2001 - BUTEL ARC2 Software for the ICOM IC-R2
Feb 2001 - RT Systems ADMS-3 Software for the Yaesu VR-500 |

Note: Reprints of Monitoring Times articles are available
for $3.00 each plus a self-addressed stamped envelope from
Grove Enterprises, 7540 Highway 64 West, Brasstown, NC
28902, tel. (800)438-8155. I don't receive any part of this
reprint fee.

ALINCO

DJ-X10T: 1998 vintage. Rugged construction - metal back.
Multimode frequency coverage 0.1 to 2000 MHz (minus cellular
bands). 20 selectable step sizes from 0.05 to 500 kHz.
Knob atop the radio clicks when rotated and serves as a VFO
knob, channel selector, and menu navigation control.
Several battery pack options for NiCd and alkaline battery
cases. Furnished with an EBP-37N 4.8 V, 700 mAH NiCd pack

and a sturdy 11 hour drop in charging stand. Loaded with firmware features and complicated to use. Two VFOs and 1200 channels in 30 banks of 40 channels each. Memory banks are cryptically designated, though you can scan combinations of banks. Each memory channel can be programmed with the frequency, an 8 character label, attenuator, a skip (lockout) flag, and mode (WFM, NFM, AM, USB, LSB, CW, AUTO). Very slow 6 ch/sec scan rate. Rescan delay is about 1 second and cannot be disabled or changed. Auto Memory Write stores up to 40 frequencies but does not check for dupes. 20 linkable search banks with labels. Up to 50 frequencies per search bank can be locked out. Digital clock with on/off timer. Battery saver can be disabled. Ability to scan or search for signals above a selectable threshold or channels with a specific mode. Band scope 7 or 40 steps wide. In short, 30 - 1000 MHz sensitivity is good, few birdies and little intermod. WFM broadcast reception very good. The DJ-X10T squelch can be set to one of 10 levels. We had to keep the squelch set to SQ3 or higher, otherwise it opens at inappropriate times, especially when the battery saver is active. The DJ-X10T instruction manual does not specify the IF (intermediate frequency) scheme. Filters inside the DJ-X10T imply 0.455, 10.7, and 45 MHz IFs. Our tests indicate a first IF of 736.25 or 275.45 MHz, depending on the frequency to which the DJ-X10T is tuned. Our DJ-X10T hears images of cellular phone signals clearly in the 1419.9 - 1444.9 MHz range, 550.9 MHz above their actual frequency. For a full review, including technical test results, see Monitoring Times, November 1998.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity,

attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

AR8200: 1998 vintage. S/N 550004 tested. Portable, high end "super" scanner covers 0.1 - 2040 MHz (minus cellular in USA version). Not a scanner for beginners. Many of the settings are made through the use of menus. Lots of features. 4 AA batteries, steel belt clip, plug-in AM antenna. 1,000 conventional channels in 20 banks, 10 temporary channels, one priority channel. Each memory channel may be programmed with frequency, label, mode, step, step-adjust, offset, attenuator enable, noise limiter, AFC, and write protect. Multi bank scanning. You can enable a 0 - 9 second rescan delay with each scan group, but not per channel. 40 pairs of search limits with labels. Offset capability for monitoring repeater input frequency. LCD display easy to read. Display and keypad backlit using green LEDs. The band scope. Shortwave reception stone deaf on shortwave when fitted with the supplied antenna or a 19" whip. Seriously overloaded on shortwave by a 132 foot long dipole unless we use the built-in attenuator. Supplied "dorsal fin" antenna for AM BCB. Scans slowly (14 channels/s). Requires more current. Audio quality is slightly above other portable scanners. Computer port. One slot for a single plug-in option: voice inversion descrambler, CTCSS search, 256 frequency tone eliminator, voice recorder and playback, or extended (slow) memory. See AOR AR8200 review by Bob Parnass,in Monitoring Times, October 1998, for review with quantitative test results.

ICOM

IC-R10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a

search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000.

Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1977 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power

transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket

and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A

query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the

part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none.

Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image

rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The

Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-91: 1998 vintage. Portable made by Uniden for Radio Shack. 150 channels in 5 banks. Can selectively follow conversations in 800 MHz Motorola trunked radio systems. Censors 823.975 - 823.95 and 894.0125 - 896.1 MHz covered by the BC235XLT. Powered by four individual AA alkaline or NiCd batteries. Power save feature. Program key. One priority channel/bank. One search bank. Direct search. Service search omits many police freqs (inc. 460 - 460.5 MHz). While connected to an outdoor antenna, our PRO-91 experiences intermodulation interference in the 161 MHz range from a paging transmitter on 158.1 MHz. IFs near 380.7, 10.85 and 0.450 MHz. See PRO-91 review by Bob Parnass, in Monitoring Times, December 1998, for review with quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per

channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date.

Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search.

No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, and 0.455. For a service manual, call SONY at (800)488-7669, and press 3. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you

find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes

FR2526 10 X X yes yes
FR2527 10 X X yes yes
FR2528 10 X X yes yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies

far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and

wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including Delphion's server:

Source record: 70809

Had two bran new 2500's. First one arrived not working sent it back second one worked after I slap it on the top cover but had the worst front end on it ever! Sent it back in because of the hum generated from the power cube and they sent it back with a wall cube from a (record-a-call) phone recorder and a inline home made filter!!! Cheep plastic case. Feels like you have a empty scanner case. Poor performance on HF. INTERMOD from hell. One sorry POS. I had it for 5 years because I simply could not sell it for even half what I had in it. The Computer control is a JOKE. DOS program that really stinks. Hard to program too.

I bought it back in 92 from ACE communications and paid Second day air on it.....They would not even refund the shipping on the first one. Ace Communication HAD poor customer service.

And I was being nice about it.

I also tried a AOR 8000 and wasn't happy with it either but the AOR8200 is one nice scanner! They should have been making them like this for a while!

You might be able to correct your reception, but you'll never be able to repair your daughter's opinion of you when she finds out you've been eavesdropping on her calls. Look, if you want to know what's going on in your daughter's life, then spend some time with her.

Ordinarily I would tend to agree with you. However, there have been a number of extenuating circumstances that have occurred recently that I am not willing to elaborate on this newsgroup. As far as your comment "spend some time with her", I am a father first and above all else and the health and welfare of my children are my primary concern. I spend an extraordinary amount of time with my children (4 of mine and 4 step kids) and support them mentally, psychologically, spiritually and financially in each of their endeavors. I have never missed a recital, competition, awards presentation or banquet. Not a small feat for eight kids. In fact, one of the main reasons that I have concerns is because I know her friends and her friend's friends and her friend's parents. We talk on a semi-regular basis and they share things with me that my daughter has failed to mention either out of neglect or deceit. I intend to find out.

I appreciate your opinion and I have carefully considered the repercussions. She will NEVER know that I have listened in to her conversations. Once I have confirmed or refuted my suspicions I will forget that I ever learned her frequency and work to correct any problems that I find out about.

To the rest of you I would like to extend my thanks. I still haven't got it working but I did buy a kit from the local electronics store and put it together last night. I would prefer a software solution if it really exists. I can't find anything out on the net.

You should also keep in mind, if you are in the United States, that there are no exemptions to the federal prohibitions against eavesdropping on cordless telephones for parents, no matter how well-intentioned. Nor do I see any such exemption in New York's Penal Law, and I do not expect to find any in other state laws, either.

The laws do not limit the prohibition to conversations involving certain people. It is a blanket restriction on listening to those FREQUENCIES at all.

-Dave, NF2G

for sale:

i have one maxrad magnetic mount antenna commercial grade for
motorola radio. has rubber bottom (no scratch) with cable and bnc
connector. this unit is all black stands 14" tall with small coil in the
middle.

it has a 3bd gain on 800mhz
and 5db gain on 400-500mhz
and it works quite well on the vhf 140-174 mhz
not too too bad on vhf-lo

this unit comes with 2 whips, the 14" one and a 3" one for 800mhz
only.

i will pay for the shipping 25.00US (international postal check) or
certified check.

thanks
brontebear1@home.com

It is probably good for business not to be associated with the FBI
or something. Another link:

http://www.sptimes.com/News/013101/TampaBay/Cameras_scanned_fans_.shtml

does mention the FBI, but it is unclear whether it was their equipment
and personnel, or was it just an database of "FBI images" that was
used.

You should check out the following site:

http://nihac.info.nih.gov/listener/listener.html

It has a very good description of how to setup a Web control scanner
that you can actually tune. This particular site controls an ICOM R7000
in the Washington DC / Bethesda MD area.

There's also a Yahoogroups (was Egroups) mailing list which covers
Online Scanners from around the world. You can subscribe to this
mailing list at the following URL:

http://groups.yahoo.com/group/livescanneraudio

This is list of available sites that have Online scaners for various PDs
and FDs around the country:

You can use Yahoo.com to access Live scanner feeds:

http://search.broadcast.yahoo.com/search/bcst?p=Live+Scanner

Dallas County Sheriff's Live Scanner Frequencies
Dallas Fire Department Live Scanner Frequencies
Plano Police Department Live Scanner Frequencies
Dallas Police Department Live Scanner Frequencies
Los Angeles Police Department Live Scanner Frequencies
New York Police Department Live Scanner Frequencies
San Diego Police Department Live Scanner Frequencies

You can use APBnews.com to access Live scanner feeds:

http://www.apbnews.com/scanner/index_blank.html

Please note that alot of the sites on APBnews have gone
dead recently. This site may not be around much longer.

You can use Live365.com to access Live scanner feeds:

http://www.live365.com/home/index.html

You need to follow the setup and installation instructions
for this site to work. Once you've done that you can enter
a search for the keyword "Scanner".

In a couple of years, if we're lucky, Uniden and the other major manufacturers will be selling APCO 25 scanners. Until then, we scanner enthusiasts are out of luck, and even the ambulance chasers will have to listen to paramedic dispatches to keep the legal office's doors open and their own refrigerators stocked :-)

The news media is in the same boat, but since they have more clout with government officials, they might get access to the appropriate monitoring equipment first, and later open the door for scanner enthusiasts, emergency service volunteers, and those who make money from listening for the next traffic collision.

The alternative is to purchase or otherwise secure a digital APCO 25 radio programmed for the system that you seek. Even if you could identify and buy the precise model, getting it programmed is another story.

Ambulance chasers here in the county are rumored to BOLO for "misplaced" on-duty digital radios. The "chasers" in Anaheim, and in other cities that have already gone digital, have seen their referral business gone dry and some personal injury practices are likely squirming.

It will only get worse as all police agencies in Orange County (except the CHP) move to the APCO 25 system, one by one this year.

Hope this clears things up a bit.

Doug Gavilanes
Garden Grove, CA..

Also, one more thing. This wasn't so much a typo as an understandable oversight based on the fact that Ricochet is marketed as being a 128kbps product. I've actually seen speeds north of 200kbps with it. Most typically though, I tend to get between 100-200kbps with the tendency to be closer to 128kbps. They sell it as a 128kbps product because that's the benchmark that they use for their SLA guarantee of 128kbps at least 80% of the time. In reality you should see speeds that range from 100-200kbps. At the end of this year we should be seeing Ricochet devices that are able to do 256kbps. I would suspect the same caveats would hold true and I'm hoping for 200-300kbps. In the meantime, what I've got is plenty.

At the Super Bowl, there were hundreds of thousands of
pictures taken by the networks, NFL Films Inc. and thousands of pro
sports photographers, not counting the fans who bought seats, each of
whom were issued a small one-time-use camera which was capable of
taking 24 or 25 shots. My ball park estimate is about a million
photographs taken by non-FBI. I can't imagine that any square inch of
the stadium in Tampa was not photographed that day.
It appears that the FBI photographer had a LOTof fellow
conspirators. By the way, why would someone who has gone to a Super
Bowl expect privacy?

Hello all,

FA: Pro 62 Radio Shack 200 channel scanner.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1211430275

4 days left. Thanks for looking. Below are more specs.

Good day

Adam - nukingcats (at) home (dot) com

PRODUCT FEATURE LIST:
-Triple Conversion Superheterodyne Tuning - virtually eliminates intermediate frequency imaging interference (common to 800 MHz dual conversion receivers) so you can clearly hear only the scanner's received frequency.

-Hyperscan - searches through unstored frequencies at 50 steps per second or scans stored channels at 25 channels per second.

-Ten Channel Storage Banks - let you store 20 channels in each of 10 storagebanks to group frequencies so you can easily identify calls.

-AM/FM Mode - automatically selects the most common reception type for the band you are scanning, and lets you override the default selection.

-Ni-Cad Battery Charging Circuit - lets you recharge nickel-cadmium batteries while they are inside the battery compartment.

-Battery-Saving Circuit - draws only 40% of the normal power.

-Memory Backup

-Lockout Function

-Keylock

Your PRO-62 scanner can receive all of these bands:

30-50 MHz VHF Low
50-54 MHz 6-Meter Amateur Radio
118-136.975 MHz Aircraft
137-144 MHz US Government
144-148 MHz 2-Meter Amateur Radio
148-174 MHz Government (Local, State, Federal)
380-420 MHz US Government
420-450 MHz Amateur Radio

450-470 MHz UHF Low
470-512 MHz UHF-T Land Mobile
806-823.9875 MHz Conventional Systems
849.0125-865.9875 MHz Conventional/Trunked
866.000-868.9875 MHz Public Safety
894.0125-896.000 MHz Aircraft Passenger Telephones (AM)
896.0125-960 MHz Trunked

Expelled? I don't think so. If you call shaving your head, preaching hate
and violence and burning crosses expressing "White Pride", you should be
expelled.

Hi- scanner is in mint condition with the exception of the backlight which is a 7 out of 10 on brightness- 10 being the best. Scanner is not modified! I could do it if you wanted me to. Scanner comes with the box,manual and antenna. The buttons are not discolored in any way. Scanner is extremely clean and scratchfree. You will be pleased. Price is $265 with free shipping. Paypal or money orders are ok. thanks Bruce in Omaha

2558. speech inversion descrambling!

Newsgroup: rec.radio.scanner
Date: 2001-02-02 21:49:38 UTC
From: ctpds49@aol.com
Message-ID: <20010202164938.22844.00000269@ng-mo1.aol.com>
Source record: 70757

Speech Inversion is accomplished by mixing the speech spectrum
(typically 300-3000 Hz) with a tone (commonly 3500 Hz) to produce some
audio frequencies (3800-6500 Hz) then filtering to 3200-500 Hz
constituting the speech inversion.

I bought the 9 cd volume a few weeks ago. Since I am a business traveler
I found it to be quite useful in finding freq's in the various states
I visit on a regular basis. I am able to look up the license or transmitter
state easily by keywords. I can then cut and paste them into my software.

I own a Yaesu VR-500 that has a upload feature with and external cable and
software that allows me to keep databases of each state that I find in
Police Call. The old way (paperback) took forever to program.

I just imported a scanner from Bandercom into Colorado without any problems. The guy that runs the place (Pete) is very cool and was always in touch with me letting me know where it was and answering any questions I had. I too bought an IC-R2 and they sent me a Yaesu VR-500 instead on accident. I was more than happy to keep it after playing with it for a weekend.

No problems on my side and had them deliver it FedEx.

Source record: 70769

The ctcss is a low frequency audio tone (under about 250 hz) on the transmitted signal. Unless you have a scanner that makes use of the ctcss or very good low frequency response you will never know it is on the signal. It is used so that several transmitters can share the same frequency or to activate receivers that are set to respond to the particular transmitted tone.

There are about 30 or so standard tones that range from about 80 hz to about 250 hz. For example if I have a business and have 5 people carring radios that have the ctcss in their radios, I can set each one for a seperate tone and when I want a specific person, then I just transmitt his tone while I transmitt and only he will hear me,but a scanner set to the transmitt frequency will hear all the transmissions.

Some of the small handy talkies that are being produced for the Family Radio Service have this capability. That way if you are in the mall and someone else is using the frequency you have, you can set your ctcss (they usually call it something else) to a differant tone. You will ot hear them , but if they and you both transmitt,then they will interfear with each other.

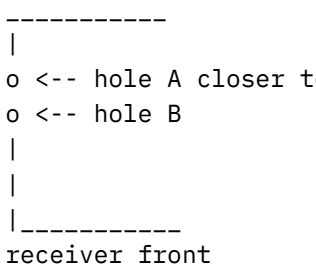
2574. Q: Pro-2035 and OptoScan 535 installation

Newsgroup: rec.radio.scanner
Date: 2001-02-03 05:12:06 UTC
From: vnetz@aol.com
Message-ID: <20010203001206.23190.00000399@ng-ce1.aol.com>
Source record: 70771

Hi ya'll:

I'm new to this newsgroup cuz I ran into a little problem installing the optoscan 535 into the Radio Shack Pro-2035. Since mere mortals aren't allowed RS service manuals I'm wondering if those of you who've done this before have an answer - I think it's pretty simple.

After I got the receiver back together it came time to reconnect the two blue wires from the power transformer to the Rx board. Ooops, this guy did everything but remember which blue wire goes in which hole. I'm assuming the transformer output is DC so i'd hate to destroy my 2035 by hooking it up wrong. So, below is a picture of the receiver circuit board. Which hole is the + and which is - ??



As for the blue wires, one is has a touch of magic marker on it so does that mean it's the + wire? Any assistance would be appreciated - you can post or email. Thanks!

also, you might wish to revise your statement there.
please note the e-mail addres.

it is valid. also, you will note that even though the IP is from
an @home address the same as the other person you mention,
you fail to realize that it is a unix shell machine (with
access to such utils as netscape, lynx, sendmail, etc).

it isn't that hard (as I am demonstrated before) to appear to
come from practically anywhere on the net with a little knowhow
and a few unix shell accounts.

Come off it john! you know a lot less about this technology
than you are willing to admit.

>wrong.

Actually the output of the transformer is AC, since both are blue it doesn't
matter
(you don't think the factory workers know enough to figure out which is
which, on the assembly line, do you)
The conversion from AC to DC is done on the main board and voltages are
regulated
via the two power transistors (or maybe one was an IC.... can't remember)

I called a local wine shop that used the Siemens and it sounded terrible. The guy mentioned the phone probalems and what the phone was etc. I was shocked how bad it was..

I use the no longer made ATT 9300 and it is obsolutely perfect. I have heard about some with the ATT 9300 hearing a carrier tone issue but never have on mine..maybe I am lucky.

Here in the Northeast "Notification Networks" are
quite popular. They are made up of scanner enthusiests,
fire fighters, police, etc. who monitor scanners and then
report via two-way radio to the rest of the users. Some
are very structured and have annual dues, others are
less restrictive and are free of cost. Another benefit of
these groups is the use of repeaters, especially if you
have a GMRS license. If you live in the Metro West
area of Massachusetts or RI and are interested in a free group,
reply my e-mail.

Man ... I just checked the price on an iCom PRC-1000.
Bandercom wants $595 for one.
I just bought one localy for $350.
I think that for the extra $245 I can do without the celluar band.
But Hey ..... If that is what you want and have the bucks ... they look like
a good outfit to deal with.

If you start a "whites only" club it is ileagle and called raceist.

If you start a "blacks only" club that is OK.

All hell would break loose if someone formed a White education fund that only awarded grants to white kids. However a negro education fund is OK. It is also OK to have an NAACP but they are not considered raceist .....Thats is odd isint it!

Equality should apply to all regardless of their race, creed, or color!

I am selling my Uniden Bearcat BC895XLT base communications receiver.

It is in excellent condition (both electronically as well as in appearance).
I am the original owner of this radio. Included is all of the original
packaging,
manual, AC adapter and antenna.

Asking price for the radio is $145 + shipping prepaid. References are
available as are a couple
JPG images of the radio if you're interested in purchasing.

Thank you in advance!

You can download the software and try it. There is a 30 day free trial.
Also, with the demo there is a 30 minute usage cutoff; then you have to
restart the program.
Try it before you buy it.

Richard

2604. Scanner Digest

Newsgroup: rec.radio.scanner
Date: 2001-02-03 16:32:20 UTC
From: zerg90@webtv.net
Message-ID: <3508-3A7C3294-3@storefull-113.iap.bryant.webtv.net>
Source record: 70653

Scanner Digest is a bi-monthly magazine containing info for the scanning monitoring hobby. Presently focused on the states of the Northeastern USA, each issue is chock full of frequencies, monitoring tips, and special news articles. Each issue averages 50 pages in a 8.5" by 5.5" booklet form.

You can send $2.00 for a sample copy to Scanner Digest POB 207 Jamison PA 18929

(If anyone has any questions, you can drop me a note at zerg90@webtv.net - my name is Peter S and I write the Massachusetts Column for Scanner Digest)

2605. "trunk system"

Source record: 70655

Obviously vk3xy is using a bogus callsign and neither of you know much about AMATEUR RADIO. Radio Amateurs have the use of internationally allocated frequency bands ranging from LF to Microwaves in which many modes of operation are supported. In whatever country you reside there is probably a national society or league who you should contact for information or you could try buying a good book on the subject.

2607. FS: Magnacraft 150W Coaxial relays

Newsgroup: rec.radio.scanner

I am joining this thread without reading replies that have followed the
original post.
I wouldn't expect anyone who goes out in public to have any reasonable
expectation of privacy (in a public place where a person does not need to make
any extra effort to see you, would not include private bathroom stalls, etc.).
I heard on the news that the ACLU was griping about the FBI looking for known
terrorists that may have posed a threat to the thousands of people at the
Superbowl. What the heck? A law enforcement agency trying to protect poeple
and some fanatical organization had to gripe about it? There must not be much
going on for the ACLU to gripe about if they sink this low.
Give the police a break......damn already

Message-ID: <3a7cec95$0$7168$272ea4a1@news.execpc.com>
Source record: 70679

I reviewed the VR-500 in Feb 2000 Monitoring Times
magazine and the ADMS-3 software in Feb 2001 MT.

ADMS-3 does most of what it's supposed
to do, though it's not elegant.

It has gaps in the documentation
and a few bugs, e.g., the user format settings have
no effect when trying to print on paper.

Visit this VR-500 web site to get started:

http://userpages.chorus.net/chambers/

Join the VR-500 email list at egroups (now Yahoo). It's becoming
more active now.

Enjoy your new VR-500. It's fun to use.

What is the problem, Tom?
You seem to allready know what is wrong with the scanner.
Do you plan to replace the part(s) yourself?
Your next step should be to try and locate a schematic so you can trace the
DC input curcuit.

If I could come up with a schematic it would be great. Also, as I said I am not positive that I am making out the number correctly because of the burning of the IC casing.

2647. Re: Yaesu VR-500/ ADMS-3

Newsgroup: rec.radio.scanner
Date: 2001-02-04 15:42:11 UTC
From: laststrike@yahoo.com
Message-ID: <903E60CFEsnorklemediaonenet@63.209.170.216>
Source record: 70696

I have the ADMS-3 with the VR-500 and have been enjoying it. The VR-500 is not real user friendly when adding a large amount of freq's into the memory. The ADMS-3 allows me to keep databases of different states I travel too and upload them quickly into the scanner.

I use this along with the Polica Call CD and just copy and paste them into the software. Works nice and quick. The only thing I noticed is that you must follow the steps exactly as they pop up on the screen in order to avoid an error.

For example: To receive or transmit you must push 1,8,ent and then you are prompted with the TX or RX window. Choose from the software what it is you would like to do (RX/TX) then choose option 1 or option 2. Choosing the options on the screen first then telling the software will result in an error.

Takes a time or two to get it right but after that it works great. I do believe there are other programs out there that read the file extension the ADMS-3 uses which might help editing the saved files. It is an "rdf" extension.

> Any VR-500 users out there? Like it? Dislike it? Any problems?
> How about the software? Anybody using ADMS-3 with the VR-500?
> I've just ordered the software and am wondering what to expect.
> Any input at all? Thanx in advance.

"Trunking" is when a system moves conversations around on a group of
frequenices. Kind of like the way long distance phone lines multiplex
conversations across different wires.

"Trunk tracking" scanners follow such conversations. Scanners need to
be made to do that.

If your scanner is a Radio Shack PRO-92, then point your browser to
www.pro-92.com for lots of information and excellent discussion.

I am new to scanning and have a Radio Shack Pro 94 trunking scanner as well as a Radio Shack Pro 71 100 channel. I have the Pro 94 set up with the Ottawa County 800 frequencies in the correct order and all is well. The problem that I have is with the Pro 71. I am confident that I do not have all the necessary frequencies entered to receive car to car transmissions, etc. I often only hear one side of the conversation. I have searched the internet to find other frequencies to no avail. Are these kind of frequencies kept secret? How can I get them. I want to hear it all! Thanks M from Port Clinton, OH.

I was looking into antennas for a possible change in my base scanner and saw the Austin Antenna's Ferret, which appears on paper to be a great antenna, but curious if it is worth the $269.95 for the antenna and inline signal amplifier. Does anyone currently use this antenna and have you had anything else to compare it to? For the MOST part, most of what I want to listen to is off a repeater, but some is also simplex and I'd like to hear both sides of the conversation. I know I'm now pulling in stuff with my Austin Antenna Spectra antenna that I didn't pick up before with a Larsen 2/70 but I was quite disappointed with the Spectra's pick up of 800 MHz. I found on my scanner, I got much stronger signal on an 800 MHz trunked system with absolutely nothing attached than when my Spectra was attached. I kept loosing signal with the Spectra connected, but I never lost it when nothing was connected. If it weren't for the fact it does a much better job in the 150 MHz range, I'd feel cheated. Right now, from in front of my house, I'm pulling in signals from well over 100 miles away in the 150 MHz area. I live above the Napa Valley and pulling in signals from Santa Clara County area and somewhere near Lake Tahoe (I haven't investigated into which departments they were, but recognized some landmarks mentioned by officers.)

Nobody will "come to peace" with powerful, unseen machines spying on their physical persons. That you even promote such a retarded philosophy suggests you're either retarded yourself, a defeatist, one of "them," or a troll.

Assuming you are in fact retarded, I'd be obliged to burglarize your home if you would let me. In fact, if you would help me carry your stereos out the door, that would give you some much-needed exercise as you "came to peace" with losing all your belongings. Moreover, if there is anything else that you can "come to peace" with (anything, that is, which might fall in my financial favor), I'd certainly appreciate hearing from you. No red-blooded American would pass upon an opportunity like you. <g>

Sarcasm not withstanding, this is the United States, and rest assured, you are free to live in 1984 if that's your bag of shit. I am, in turn, free to mock you for choosing dung over civil rights.

> Now, if you are a lawbreaker, YOU would be the ones having a problem over
> this issue. It is that simple.

It is that "simple?" Well, ignorance *is* bliss.

Your demographic badly needs to fabricate a new excuse for folks on my side to laugh at. The "only criminals would object" ploy is gathering dust.

> There is no other explaination I can be convinced of.

Scratch "ignorance," insert "stupidity." I believe you're looking for the newsgroup alt.cascades, my brain-damaged friend. A closed-mind is as good as a dead one. No, scratch that also. A dead one would be useful to medical science.

> Don't waste everyone's time with some dumb-ass reply

I'll leave the "dumb-ass" reply to you. I'm sure that you'll have one.

> (that makes you look like a fanatical lunatic

Oh, dear! Everybody! Listen closely to this "emoney250@aol.com" guy! He says that if we refuse immediate subscription to his opinion, a bunch of faceless nobodies on the *internet* will think we're all fanatical lunatics! What *ever* will we do? Oh, the shame! We'll have to *kill* ourselves!

I am in deed fanatic about the civil liberties and rights guaranteed to me by United States law. Unfortunately, I must leave the lunacy aspect upon your head. Unintelligent, uneducated, or, yes, loony persons without grasp of life in other countries are simply unable to appreciate the notion of patriotism. Pop-culture disciples, too, are mostly programmed to associate traditional values, patriotism, et al. with "uncoolness." Which are you? Perhaps, in addition to draft registrations, every American lad of 18 should be sent abroad for six months to sample life under the regimes of Vladimir, Jang, or Fidel, followed by mock swearing-in ceremonies upon their return. The ordeal potentially would demonstrate, to even the most clueless soles (like the one to which I'm now responding), why Americans must continue to sternly refuse any attempt, no matter how small, to infringe upon their rights and liberties. Their having done so historically is why we still have a constitution today. Their *not* having done so in modern times is why only shreds of said constitution remain today.

There may be no provision in the constitution or other law which prohibits facial recognition technology's use upon unsuspecting masses. However, existing legal precedent would certainly prohibit our streets from being lined with federal agents, demanding each pedestrian pose for photographs so that their faces could be compared with mug shots down at 'headquarters.' Automating that process via computer technology does not change the issue, nor the manner in which it would be interpreted legally. Arguing that it does shows your lack of logic and sensibility, and only defaces the value of your opinions in future posts.

> and only draws attention to yourself further by "big brother")

If, as you say, our lives are already monitored in more ways that we realize, then please tell me what difference it would make? (You seem to be off your game today, emoney250 ... if you were ever on it.)

In closing, I can only offer one additional thought. If you really do not believe in this country's fundamentals, why then do you not immigrate to another country, such as Cuba? No "wittiness" is implied by that. Simply, if you'd be happier in a stringent police state, then I'm just pointing out its availability to you.

I don't know about the 760, but for the 200XLT & 8500XLT, to clear all
memories you press Manual, 2, & 9 at the same time, then turn the unit on.
I don't know what other Uniden scanners this works with, but it may be a
Uniden standard so it's worth a shot. Let me know if it works.

These frequencies belong to other services such as police, fire, etc. There is no authority to do this by any agency, even the FBI, DEA and similar agencies have hundreds (if not thousands) of frequencies in many bands to pick from if they wanted this type of setup. Who the broadcasts are meant for remains unknown.

'headquarters.'

Are you sure? What legal theory or cases can you cite for your conclusion?

(Hint number 1 - take a look at case law holding that compelling someone to show their face as a means of identification does not violate the Fourth Amendment.)

((Hint number 2 - constitutional restrictions on technology do not apply to private citizens or businesses but only to the government. As someone pointed out early in the thread, the news report referenced in the subject line did not mention the FBI, and in fact the government does not appear to have been involved in the actual photography.))

Now, I'm not disagreeing with your view about civil liberty or its erosion. However, if you want to make strong arguments, you need to be careful of the terminology you use and the legal assertions you make.

The police have to first establish probable cause for their actions, e.g., you are already under arrest [and in Canada, photographs of the accused can only be taken for indictable offenses ("felonies" -- sort of)]. At no time can a police officer compell random persons on the street to pose for a mug-shot.

> ((Hint number 2 - constitutional restrictions on technology do not

Irrelevant. The stadium agreed to, offered to, or otherwise allowed the exercise to take place -- this, in effect, made them agent of the state, and thus the "usual rules" apply. If a cop asks you to do something and you agree, or you are served an order to do something for the cops, even though you are a private party, you become a proxy for the state and things like the constitution apply to you.

This is probably one of the best scanners ever made. Mine is in mint condition. No dents, scuffs, or scratches. I am the only owner and took excellent smoke-free care. Includes original owner's manual too! This is a great radio and I'm sorry to part with it. Bid with confidence. ---------- Programmable Scanner Features Liquid Crystal Display-shows the channel and the frequency you have selected, as well as other information. Two-Second Scan Delay-helps to prevent your losing replies on a channel while you are scanning. Memory Back-up-keeps the channel frequencies stored in your scanner's memory if a power failure occurs. Lock-Out Function-lets your scanner skip over a specified channel or group of channels. Ten Channel Storage Banks-allow you to group your stored frequencies so that calls are easier to identify. Priority Channel-helps to keep you from missing important calls on the selected channel. Direct Frequency Search-allows you to scan through every available frequency to find interesting broadcasts Monitor Banks-allow you to save up to ten additional channels located during a frequency search. Sound Squelch-keeps the scanner from stopping on a channel that is only broadcasting a carrier, with no voice or other sound.

Radio can be found on ebay for the next 10 days. Search for item # 1212928151.

From what I've heard reported about previous legal cases, I think that the dispatchers keep tapes of their 911 calls, and that those tapes can be subpoenaed if a citizen brings a lawsuit. If that's true, then it is a matter of public record.

Being an American citizen does not, however, guarantee one the right to be furnished unencrypted analog signals in the airwaves for their listening pleasure. You might as well protest your inability to listen in on encrypted Federal Government or Military communications.

No, it's not. Police communications are considered 'policies and
procedures', and other things that aren't covered by the assorted 'public
records' laws. Sorry, you don't have a 'right' to listen. Not under law.
Whether you SHOULD have that right is another question. In fact, the
current law says you may NOT listen to digitally encrypted communications.
(which, generally, all police digital is -- besides being digital
modulation, they also encrypt the datastream normally, or at least have the
option to do so.)

Strictly hypothetical since I am really curious.

This is in ref to scanner laws. The one that is pretty much global, and also should be in all scannerists code of ethics is "if you hear it, keep it to yourself. If you divulge what you hear on the radio, you're a turd. Oh and could prolly end up with a nice jail sentence and all of your gear crushed and turned into small transformable robots for the less forunate."

SO what I want to know is, say you are listening to one of the following "no-no" forms:

a)cordless phones
b)cellular phones

and you hear the admission or planning of a serious crime that is more than likely (I am talkin 99% sure that its not bullshit) and in the course of this crime people are going to get killed, or wounded, or made seriously uncomfortable.

What do you do? DO you divulge the authorities the details of what you heard or turn over any evidence of the transmission, KNOWING that you could be convicted of a crime, the criminals get off for violation of privacy, and you gear goes through the afforementioned fate?

Or do you keep it to yourself?

Please don't send flames or nothin. This is not a real situation, just one a fellow new scannerist asked me, and to be honest, had a hard time answering.

I think I would divulge the information and try to conceal the source. But that would put me on the suspects list. But I guess it would finally come out, and people would have died had I not disclosed what I knew, tyhey may cut me some slack.

What would you do?

Thanks

Neil

Mackey....I found a friend for you. Really. One who shares your myopia. One who gives head as you like it. One who is as disfunctional as thee be. His name is Ivan and he lives in Canukland...just above you. Across the border. He's perfect for you. I'll get him to come over here some time and you and he can do head together. I had to do something for humanity. Ivan is the answer. He also takes up a lot of blather-blips on the sites he feces over. But i've told him about you Mackeral and to be here with you to find you and to cherish you as only he can. He's even got a WWW site. he shows his ass on it too. I know you will appreciate that. Mackey...your enigma has been found. He will tickle your fancy and then head-on with you nightly. Maybe you can do it via streaming video. I have outdone myself here. I never thought I would help you enjoy life better. But Ivan and you just got to be born again. You have done so much for this site here that only you and Ivan can figure out just what it is. Seriously Mackeral-stink. And he stinks as you do. You should see his hair-do. Wonder how many lices and fecal burgers you will discover in his morass of the past. And his reach is shorter than yours. so you will be in the "above" position with him. I tell you stink man the day IVAN cums into your life will be the reason you quit taking up space on this group....quiet space.

Oh IVAN...where are you Ivan...I'll try to coax him over here. Pretend love is in the air. You two really need each other. He has your reach Ivan...he says and little is forth-coming. He spits and frets and does 69's on his "you know what"...things you can share now. And he will be your favorite.

No more need you blather to us. Ivan will be your new reach. Ever so low as that is, but hey, it gives you a goal.

Well, I'll tell Ivan you are waiting for him. I'll tell him to bring a "leg-opener" ... being that you are sort of shy about where your thing is located....break it to him gently. I'll forewarn him. This guy gives head. Maybe you and he can sing a duet together and leave a voice-message from the site he rites from.

OH Mackey....Oh Ivan. Your day has come.

Everyone clap for Ivan/Mackey. Finally an answer.

2716. Study: Cell Phones Are Safe?

Newsgroup: rec.radio.scanner
Date: 2001-02-07 12:16:04 UTC
From: zerg90@webtv.net
Message-ID: <6407-3A813C84-8@storefull-116.iap.bryant.webtv.net>
Source record: 70616

Notice that my headline is not the same as the headline from this www.infobeat.com story.

Study: Cell phones are safe
WASHINGTON (AP) - Scientists who tracked the health of 420,000 Danish cell phone users found no sign the devices increase cancer risk - the biggest study yet to provide reassurance about the phones' safety, but one that won't end the controversy. The study, published in Wednesday's Journal of the National Cancer Institute, concluded cell phone users are no more likely than anyone else to suffer brain or nervous system cancers, leukemia or salivary gland tumors, cancer types that have worried critics. It won't end the debate. Several thousand Danes had used their phones for more than 10 years, the time it can take a slow-growing brain tumor to appear, but the majority had used them for only about three years. Federal health officials insist there's no real evidence that cell phones used by 97 million Americans cause health hazards beyond car crashes caused by people yakking while driving. Yet no health or government agency gives the popular gadgets a definitively clean bill of health, either. Unable to give a clear answer, the Food and Drug Administration tells worried consumers they can simply use an earphone device that keeps the phone's antenna away from the head. Cellular phones work by beaming radio-frequency energy, low-powered radiation. Most research - including two recent U.S. studies that examined 2,400 people, some who had used cell phones for five years - has found no risk.

I just got back into amateur radio after a three to four year layoff. The language has changed a bit since I was last active.

For instance, where did saying "QSL" or "Contact" come from?

Q codes are for CW, not phone. Saying QSL is the same as saying 10-4 to my ears.

Contact? I have no idea where this could have come from. The traditional method of injecting oneself into a conversation (which is rude if the conversation is between two hams), is to announce your callsign. If the participants want company, they will invite you into the conversation. If not, you will be acknowledged as the next in line for the frequency when their conversation is complete.

I'm not stupid enough to think that anyone cares about my opinion, so there's no need to be offended. It's just that even I, an ex-CBer during the seventies, can see some of the CB SSB language infiltrating the ham lexicon/culture.

Does it matter? Not really, but it does seem to make us seem a little less intelligent. After all, the rules for telephony state that we are to use plain language, not codes or ciphers. But then again, that's just my opinion.

Try the Optoelectronics Scout. It will fit these requirements and more. Plus it has a vibrate mode for undectable logging. I LOVE mine....Bryant

Well, being a scanner enthusiast & working in law enforcement, I can honestly say that this is a very tricky situation. On the one hand, if you don't do anything people will get hurt. On the other hand, you can tell the police and save the day, but end up in trouble for hearing it in the first place.

The only solution I can see to this dilemma is to give an anonymous tip to the police. Tell them the details about the crime, but either tell them you know it's going to happen but can't say how you know, or remain completely anonymous and tell them how you heard it. Most police departments will act on anonymous tips, especially if the crime is serious enough.

It may be possible that your local prosecuting attorney may waive any charges against you in favor of your testimony to what you heard. But I wouldn't want to take this chance.

There may also be some 4th Amendment issues raised with the illegal interception of a cellular or cordless phone conversation, so it may be best for all if you didn't disclose how you knew about the crime. If the criminals' lawyers knew how the information was gathered, they may be able to throw the case out. Then again, it was you that illegally gathered the information and not the police.

This is not meant to be any kind of legal advice. This is just what I would do in that situation.

You mean these bursts trigger the scanner somehow so that the number of scanners, at that exact second, on that frequency can be known? Sounds like a lot of expense and trouble in exchange for very little potentially useless information. What portion of the scanner circuitry could possibly be monitored miles away during reception of a signal?

NO.

You do mysterious things then look for how much interest is generated in, for example, r.r.scanner, a.r.scanner, a.r.amateur, r.r.amatuer. Then you say "well for every person in these groups who is talking about our test signals, there are probably 20 people that heard them but didn't say anything about them in these forums. Therefore, since we counted 52 'me too' posts in these groups, there must be 140 people listening."

It is simple people.

2737. Re: Help with Bearcat BC-300

Newsgroup: rec.radio.scanner
Date: 2001-02-07 20:48:14 UTC
From: "Adam T. Cately" <atcately@bright.net>
Message-ID: <3A81B48E.88386388@bright.net>
Source record: 70630

It should program just like any other Bearcat...here's a quick
primer:

Hit "manual" and then the channel you want to program (i.e. - "1")

Use the numbers to program the frequency you want ("155.370")

Press "E" to enter the frequency into that channel.

Manual to the next channel and repeat the process.

This will program the frequencies you want into the channels you want
them in. The 300 has "service scan" buttons with pre-programmed
frequencies in them - you could use those for a search of your area to
see what's being used, then program the specific freq's into channels
when you find them. I don't have a manual for the 300, but the features
of the 300 are the same as all of Bearcat's other scanners with the same
features...

As I stated, doing this would be self-defeating. Discussion about a strange signal would garner a lot of interest from those who otherwise wouldn't be tuning in or discussing it.

Do you think they (whoever they are) really care about how many scanners are out there? Like I said, if they really cared if anyone was listening, they'd scramble their communications.

I can understand your point, but it's a long stretch of credibility to think that anyone is doing this in order to find out how many scanner listeners are out there. Why not just go to Uniden or Radio Shack and get statistics on the number of scanners sold?

Havent operated on the old ham bands for a couple years now. I keep the license up to date, but there are just too many idiots on the air for it to be anywhere near enjoyable any more. don`t worry. the FCC is selling them off piece by piece anyway. Ham radio has had its day, and the ARRL and FCC let it go down the drain. It is now going to die a well - deserved death, and leave us all in peace. We still have the internet, and we can easily talk round the world on it. I stopped putting up with CB pond scum years ago, and since that is what the Ham Bands are on their way to becoming, I think it derserves equal attention .....

The downslide began well before the current license testing scheme was put into effect. If the bands are sold off, so be it. I'll take my entire share of the profits of such a sale down to the corner Starbucks and by myself tall caramel macchiato.

If he had a license he is a HAM not a CB'er
Frankly Freebanders are like the Hams of old. If you look at the FCC
enforcement logs The Hams are out of control and need enforcement while
Freebanders are mature and working to improver thier knowledge, save lives,
promote freedom and democracy, and gernerally aid and improve the geneneral
welfare or thier comunities.

2747. 2005 beeping problem

Newsgroup: rec.radio.scanner
Date: 2001-02-07 23:40:37 UTC
From: gary3187@my-deja.com
Message-ID: <95smdkdph1@nnrp1.deja.com>
Source record: 70646

I have a pro 2005 that keeps beeping every two seconds when it is switched on and flashing the battery warning sign.I have changed the battery and checked the connectors and wires to the circuit board but all that is fine. Could any body help plus has any one got a service manual fof the 2005 scanner.

Legality aside, I could never live with myself if I, in order to protect my own skin, held back information which would have prevented anothers death. In this scenario there's no debate for me. I'd risk the jailtime.

If we're talking about petty crimes like stealing bikes or something.... thats's another matter.

Interesting query!

So ya gonna squeal or what? ;-)

Good Job Brenda Ann ... i have also been a ham since 1978 code never interested me at all i passed every element of the theory more than once in hopes that one day i would get my speed up to 12 wpm ... well i never did study anymore code and now thanxs to the fcc i am a general. and the same as you i know more electronic theory and amatuer operating principles etc than many extra, advanced and general class hams who have been able to pass the code portion. for what its worth.

It's true look at your own foul and filthy mouth!
Ham's always use foul language and filthy talk on the radio just like they
do on this newsgroup. Freebanders know better. Freebanders are mature and
can express themselves without spewing forth filthy language.

2756. KSP to Digital - Citizens Lose Out

Newsgroup: rec.radio.scanner
Date: 2001-02-08 01:10:02 UTC
From: lisbon45@webtv.net
Message-ID: <11793-3A81F1EA-9@storefull-113.iap.bryant.webtv.net>
Source record: 70555

from the Internet -

Sources now tell me that KSP Post 16 in Henderson will go digital within
2
weeks.

I have been told the same by troopers from Henderson post. 453.300 has
been digital for some time now, sorry to see this happening, KSP was
where most of our EMS & Rescue personnel got advance warnings of
accidents and incidents that we need to respond to.

[KSP = Kentucky State Police/Patrol]

==========

"The moral test of a government is how that government treats those who are in the dawn of life ☐ the children; the twilight of life ☐ the elderly; and the shadows of life ☐ the sick, the needy and the handicapped." - Hubert H Humphrey

2757. Scanner Antenna for 800 to 900 MHz Band

Newsgroup: rec.radio.scanner
Date: 2001-02-08 02:40:48 UTC
From: MindSpring User <blyall@mindspring.com>
Message-ID: <95t0kfsqv1@slb5.atl.mindspring.net>
Source record: 70556

Scanner antenna for cellular band. Also works well in 800 MHz emergency services band. This is a 90 degree angled antenna, with BNC adapter included. It allows good reception with a handheld scanner on its side or back, or can be used with a desktop scanner.

To bid on the item, go to:

Point of Information: Gass was charged after he programmed some Motorola radios with the talk groups for the City of Tulsa's 800MHz trunked radio system, for use by several Tulsa media outlets, newspaper and broadcast. This was prior to the development of trunking scanners by a year or two. The existence of such scanners adds even more weight to the findings of the court that resulted in Gass's acquittal. There are several paragraphs in the ruling by the district court that do tend to make me favor the anonymous tip route. Everybody should read these, they are very informative.

Hello group I have an old RS Realistic PRO-57 scanning receiver, it has limited frequencies, up to 512MHz, and I am wondering just what I can listen in on as our police and sheriffs are on a new trunked 800 MHz system. Can anybody make suggestions concerning uses for entertainment. I realize that the police are above my bandwidth with this unit.
Thanks in advance

Source record: 70567

Well, for $150 you won't be able to Trunk-Track unless you buy a used PRO-91 or such on eBay. Radio Shack stores in the United States are selling a new scanner for $200.

As for scanning "god", that requires permission from Il Papa, but you're already in Italy, so hey, give it a try...

You are somewhat right. I dispatch for local law and we get a lot of
the same people, over and over again. About half are domestics and
child custody. People seem to think that we partice civil law. But,
you have to believe the higher IQ people dont call the law that often.
They call their lawyers.

I agree and I bet most of the reacurring calls originate from a trailer
park. I heard just two days ago where an officer was dispatched to a call
saying "man was giving 10-64 to another man in front of a child". I tried
looking up a 10-64 but it didn't fit the call. I don't know what it is but
then again I don't think I want to know.

Been hearing double-hop skip on 39-42Mhz all week. Police and fire departments from across the country.

Does anyone have a listing of all the low-band VHF police/fire allocations?

The same place that other slang comes from, Ed. Years ago, we had very different meanings for "cool," "gay," "bad," and a long list of other slang words used in our everyday language. Since everyday language continuously evolves, it is a little unrealistic to expect radio language to remain static. In fact, I'm fairly sure you were using some words four years ago that hams didn't use twenty years ago.

> [snip] After all, the rules for telephony
> state that we are to use plain language,
> not codes or ciphers. [snip]

But for anyone who uses a ham radio, QSL is about as plain language as it gets. And, the last time I checked, "contact" was in the english dictionary.

"QSL" as a synonym for "yes," or "message received" is very old,
perhaps almost as old as amateur radio itself.

But "contact," meaning "I want to contact you" is quite new, less
than a decade of commonplace use I think. I think it migrated to
amateur radio from the Citizen's Band, though I don't know if it
originated there, and I welcome corrections if I'm wrong. All I know
for certain is that it was almost never heard on the HF amateur
bands from 1968 (when I started listening) until the 1990s.

Personally, I feel that "contact" when used with that meaning is
outside the amateur tradition and also outside good English usage,
so I don't utilize it. The traditional amateur term is "break."

With all good wishes,

Kevin, WB4AIO.

2791. Problem with PRO-2006

Newsgroup: rec.radio.scanner
Date: 2001-02-09 00:53:46 UTC
From: Excalibur@camelot.net
Message-ID: <dsf68tktbot7er7nlg3ki0l7kf7uroj7b8@4ax.com>
Source record: 70591

I have a PRO-2006 that water was spilled into it. It wasn't a lot of water and the unit was plugged up but not on at the time. I left this unit in my vehicle for about three weeks in the hot summer heat to dry it out before trying it. The unit works fine but it keeps flashing the low battery symbol even with replacing the battery twice. It lost all frequencies so I know that the battery is not holding the memory. Any suggestions? If not, can anyone recommend a good scanner repair service? Thanks in advance.

2792. SMR Frequency Needed Miami FL Area

From: Hackrbum <hackrbum@gate.net>
Message-ID: <95vgqb$1k88$1@news.gate.net>
Source record: 70592

Can anyone tell where I can find SMR Frequency Listing for the Miami area, I have used Percon and FCC databases but for some reason I'll get all the channels except the data channel. I was able to find the data channel for Industrial Communications WNKM848 (10 trunked channels). And it works great! But I still need WPFZ908 (20 channels), and WPDV231(20 channels) of Industrial Communications.

FCC Database: http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts helped me locate the channels for the callsign info. It gives the list of all the frequency for that callsign but none of them is the data channel!

If any one can help, thanks in advance!

No! No! No! Big brother can see you through the cameras disguised as
spiders
on the wall! Just kidding.

Actually... That burst contains a powerful subliminal message. Hypnotizing
you
into calling this secret 800 number where you register (if you have a
touchtone phone)
your name, time and frequency you herd the signal.

Or it could be the pesky Russian "Woodpecker" signals transmitting their
deadly, earth quake
causing scalar EM waves!

-LOL

Sir,,

You are wrong on the above. Besides breaking the law and interfering with legitimate communications of other domestic radio services, the "skills" of "freebanders" hardly qualifies them for the promotion of the welfare of the community--among other things. If that were true, how come when there's a disaster (flood, tornado, hurricane, etc) they don't call on the "freebanders" to help out instead of ARES, RACES, the host of hams who are not in the above organizations, and Civil Air Patrol? How come they don't ask for "freebanders" to pass traffic on 27.555 instead of hams on 3872 KHZ, or 14.300? In time of disaster, when other comms are down, more traffic is passed by HAMS than any other group.

All this bullcrap about ham radio being "dead" is wishful thinking, bud. And for every "bad" ham that "may" be heard, I can find TEN CBers just as bad or worse. BUT! Does that make CB itself "bad"? NO! For every ten of the "bad" CBers, I can find 20 good ones. For every "one" of the so-called "bad" hams, I can find 100 good operators. The FCC's return to enforcement is welcomed by the rest of the Amateurs and, we hope, that their activity will weed out the bad ops. The rest of us that get smeared by the activities of a few welcome the departure of the jerks. Same with CB: you can't judge the entire service by the antics of a few morons.

I have uploaded the TrunkTracker3.com website that is dedicated to the Uniden BC780XLT. The most unique part of the website is the BC780XLT Owner's Manual in HTML format with Real Audio enhancements. There are several more features that I am still working on that should be uploaded next week.

do you guys want to hear a something awful. I havent' used my yupi m9 in months. as a matter of fact I forgot allabout it until the wife had me clean out the old closet. Now I am having a ball with it again. It has been over a year ago since I used it and the lithium batteries from home depot worked great. love the thing i just wish i could use my computer along with it. I need a base unit and am thinking of the new aor to use in conjuction with my computer. that would be groovy!

I used to love listening to the white trash on the cells talk to their boyfriends of the week and discuss if they should buy baby formula or ciggaretts but the wife and I work in the emergency room now and we get to talk to these folks all the time so now i am enjoying listening to aircraft and trains I also like catching hams and am going to listen to the space station as soon as it is up and cooking. hope yupi comes out with a new one that smokes and has a computer interface.

Heck, for all we know it could be coming from the contact managers everyone has on their computers today. Or it could be coming from the business world. I've noticed a lot of business people saying that today - the word "contact" both as a question and statement (meaning "will you contact..." as a question or "yes, I'll contact..." when answered back). In other words, who knows where this stuff comes from.

Correction - It won't sell at that price, unless you find some ignorant
fool around - always a possibility.

The going price for one that can be modified to cover cellular frequencies
seems to be $250-$300.

It came from CB sidebanders back in the mid-70s or so. They wanted to
talk like hams, but they didn't want to say "break" because it sounded
too much like AM CBers, so they started that idiotic "contact" crap when
they wanted to break in.

When I want to break in, I just give my call letters. It gets the job
done, and saves time letting people know who's breaking in.

Yeah, you're probably right, but I've never attempted to hide my previous LE background. And I'd had a really bad night, my temper was on low threshold. What is it they say about patience, that it's the art of not beating the s**t out of some a**h*** who really, desperately, deserves it. Well, some of these postings really try my patience sometimes.

BTW: another one from the local freqs. (Some information has been changed to protect identities.)

Dispatcher: "Central to 173, 911 hang-up"
173: "1st and Main, go ahead"
Disp: "1723 N. Sky, I have a 911 open line, subject on the other end is refusing to respond, but I can hear laughing in the background."

Several minutes later:
Disp: "Central to 173"
173: "Central, I'm 10-97 (on scene), go ahead"
Disp (obviously gritting her teeth): "173, Be advised I'm willing to sign a complaint at this time, this is children playing with the phone. They keeping picking up the phone and belching and cussing, then hanging up."

I had to get out of the car at that point and missed the rest. Got to wonder about these kid's IQ's, even a moron could figure out that 911 is NOT the number to make prank phone calls to! LOL!!

the
> majority of people have low IQ's........

Well when the majority of people you speak to have extremely stupid questions that they should be able to figure out on their own, you have to wonder...

Like the lady that called up wanting to know what the strange clicks on her phone are... Do I look like a telephone repair tech?

Or people that want to report their power out... call the electric company, not us. And no, we DON'T know when your power will be back on.

How about the lady that called 911 because her dog was sick? Sorry, but ambulances are for humans only. I felt sorry for her, but there was really nothing I could do, and she was just wasting time calling 911.

Or the lady that wanted to report a nieghbor of hers who sits on his front porch every morning. He doesn't do anything, just sits there every morning. She thought that we needed to tell him not to do that. I informed her that we were not going to violate his civil rights.

The drunk guy who called up to report his house stolen. A couple days later he called back saying that they brought it back.

The best one is the family who set off two bug bombs in their house & went to bed for the night. They did it again almost a year later. I'm not making this up, but these people home-school their kids.

As an aside, one of my pet peeves are the numerous cell phone users out there who don't realize they've sat on their phones and they dial 911. We get tons of 911 cell phone misdials every day. If you have a cell phone, or any phone for that matter, don't program 911 in a speed dial memory. Chances are you'll accidentally hit it and call 911 by mistake. It doesn't take much time at all to punch 9, 1, and 1 into the keypad.

Thanks for the rant.

Maybe the systems in question use a form of trunking that does not require a control channel. This would enclude Uniden ESAS and EFJ/Transcrypt LTR trunking.

No, it's actually a new form of ACARS being transmitted by the aircraft
spraying chemtrails. Either that or secret digital messages being sent to
the secret UN troops at various bases around the country...

I doubt it. I don't think the scanner's front end would be wide enough to get all the video signal without some extensive modifications. You may be able to tap the discriminator and use some sort of device to see the video.

Or you could run down to Ripoff Shack or Walmart and buy a new TV for around $125.

I paid $400 plux tax for the scanner many years ago. It seems that since Radio Shack does not make the PRO-2006 anymore, and it is still the best scanner that was ever made, that it should be possible to get a premium price.

Its not the front end as much as the video circuitry. My R7000 has the
TV-R7000 TV receive adapter. Taps off of the IF and runs to a monitor.

Glenn

Best is always debatable. Scanners have come a long way. It is only
worth what a person will pay for it. I think if you listed it on Ebay
you may get $400-500. People are just too smart on here to pay that kind
of money (watch-some dumbass will prove me wrong).

RF amps will amplify the noise as well as the signal and this most often yields no improvement in sig/noise ratio. An outside antenna with the amp mounted at the antenna is the best way to go. That setup overcomes the loss of signal due to the run of coax. For an inside antenna the rf amps do not usually help much. Look at Grove Electronics web page and check out the band filters.
http://www.grove-ent.com/
Sometimes removing the noise from other bands will improve reception on your band of choice. At any rate Bob Grove has a LOT of good scanner antenna information there.

Actually, this is the transmission you tune into, and get lulled into a dull sleep so that aliens can feel free to abduct you -- leaving you with no memory of the incident until years later in hypnotic regression therapy.

They've even implanted a false memory of being overly concerned with unexplained radio scanner noise.

;)

That depends... are you near a ground floor or an upper apartment?
Depending on your altitude you may not need any external antenna, but one
may help. It's always good to experiment.

I would definately say yes, especially if you want to hear stuff going on at any distance. Inside, you'll probably pick up NYC's finest, the fire dept and ambulances, but not a whole lot else. I have a simple Rat Shack mobile mag mount scanner antenna outside on my deck, about 8 feet from the ground and it makes a big difference.

Hi

Does anyone have any tips on reducing interference on wefax reception. I am using an FRG-100, Wellbrook active loop antenna and WXSat. The antenna is connected using URM76 Low Capacitance cable. Wherever I position everything I seem to get a lot of interference. Could it be either the receiver not being up to it or the cable? I am new to all this so sorry if i'm being thick! Any help greatly appreciated.

Not that I'm aware of. The real estate part of the place I used
to work (Cell company) had listings of every single cell site
in the area. For co-location.
I'm sure this info is readily available in the city or county's
permit department in which you reside.
I'll try to find out from Real estate if it is on the web somewhere.

Dear Sir:
I just bought a used Realistic Pro 2050 Trunk tracking base scanner from Grove Industries on the Internet for $79.00 U.S. money and it really does a great job. It is sold by Radio Shack in the United States and a really good product, well made, small with good volume. As I write this I am listening to Police transmissions from a city about 40 miles from where I live. Grove Industries has a Website on the internet but I cant remember the website address. They have both new and used scanners.
I hope this has been a little bit helpful, Shalom

I always thought that "break" was an "pseudo emergency" "pro sign" in FFC or
maritime language not to be used routinely.
What do others think.

A double break ("break, break") or triple break used to be used to
indicate priority or emergency traffic. The FCC doesn't have any
guidelines on the matter.

With freedom, comes responsibilty. Freebanders aren't acting responsible
when they interfere with other communications services. It's the "yelling fire"
cliche.

I do, however, have a problem with the FCC telling me what topics I may or may
not talk about. Example: During an interview several years ago, an FCC official
said that discussing controversial subjects over the amateur frequencies
basically violated 97.1(e), because such subjects, as he put it, "did nothing
to enhance international good will."

This is a regional thing. I don't remember any SSB CB'ers using "contact" instead of "break" in the 70's (Washington, California, or North Carolina). And I haven't heard a single ham operator around here using it today, but I did hear it one time in Washington state recently.

Because it is so regional in nature, I really don't think we can so easily blame this on "those CB'ers." Instead, I suspect this is coming from somewhere within the ham community itself, or coming from plain language outside of radio.

> When I want to break in, I just give my
> call letters. It gets the job done, and
> saves time letting people know who's
> breaking in.

Most people do that, but I don't know how much it really saves time by letting people know who's breaking in. In my case, unless I already know the person (and callsign), I rarely ever catch the callsign of those breaking in this way.

>
>Or do you keep it to yourself?

frankly ..... (in times past , of course) ..... I have heard people
on amps cellular planning murder or robbery ...or drug deals and
generally (on those calls) you couldn't do anything if you wanted
..because you don't have enough info to intercede. (don't know
who or where they actually are)

cordless phones could be another issue ,because you might know
whom the perps are. " In my opinion " ..here you are entering
moral and ethical issues ..and basically have to do what your
conscience dictates. If you have to act ..simply go to an isolated
pay phone and call the local anonymous tip line and make the report.
They give you a number (never ask who you are) and if there is

a reward ..you collect it by knowing the number and details of your reports. You NEVER have to actually risk your identity in most metro areas.

Thanks for nothing Dave. I don't check it every day because I have a life
unlike yourself. I needed the information in a hurry for a project and I
received more than 10 replies off list.

No thanks to you and your useless input.

Get a new life. The one you have now is a poor excuse.

If available in the US try a DECT cordless phone. These are using
digitally encoded speech. You can hear them on your scanner, but just as
'digital noise'.
I'd expect the NSA to have the ability to listen in, but you are secured
against a 'normal' scanner user.

If you don't need the video capability, I recommend
an IC-R2 instead of the IC-R3. The IC-R2 is smaller, covers the
800 MHz band, costs less money, and the batteries
last longer.

I've used both.

If they really wanted to listen in, I'm sure they'd have that capability,
but would more than likely just tap your phone line. They may be able to
decode the digital phone, but what happens when you switch to a hardwired
phone?

At any rate, I'm not really worried about the gummint listening in, but my
digital phone keeps my conversations private from other scanner listeners
out there.

One of our local older RS dealers was in the process of closing during the past month. One day I stopped by to ask about a TV amp, while talking to the retiring owner I mentioned I worked for the Boise FD. We chatted about scanning and radios, when all of a sudden he mentioned he that he had cleared out his entire stock of current scanners but, had a older scanner in the back still in the box gathering dust it had been returned to RS as a demo and needed a repair way back, when he brought it out it was a PRO-2006. I asked him how much and he said $100. So I'm now the owner of a MINT PRO-2006. I've had several over the years and been in scanning since 1966 (first radio was a Hallicrafters S-99 high-Band Civic Patrol) and still have this MINT working old-timer.

These are great radios but, not worth much more than $250 TOPS Cellular listening is a has-been and faded from vouge with the advent of digital. Other than that the 2006 intermod rejection and sensitivity are hard to beat, however it's becoming an sign of the advancing technology times, Still a great radio but not worth $700 no way never. But good luck we all remember what PT Barium said..... And boy did he sell circus tickets !!!!

Can anyone give me the most common freq. for the Illinois, Missouri, and Oklahoma State Patrols. I've done some searching and come up with a lot of them but hate to program a bunch of them in that aren't going to be used.

Thanks in advance!

Hi all,

I've put up plans for a biconical design broadband scanner antenna on the internet at http://photos.yahoo.com/n2uhc. Click on "Projects." You can also find plans for the Super-J pole antenna there.

For Oklahoma, try 44.70/44.90 MHz and 45.22/45.18 MHz, the first half of each pair is the base-to-car/car-to-car frequency, the second half is the car-to-base frequency. Which pair is used depends on the area.
If you are going to be in Tulsa, Oklahoma City or Muskogee, or on the Turner Turnpike between Tulsa and OKC, then you need a trunking scanner.
Here's a few websites you might look at:

http://www.scantulsa.com/default.asp
http://www.angelfire.com/ok/taf/
http://www.angelfire.com/ok2/brokenarrow1/
http://www.geocities.com/okctrunked/

There are various repeaters used to relay the VHF-low frequencies, however the OHP is currently in a multi-year radio conversion process, and my list of the repeaters is way out of date. Eventually they are switching entirely to 800 MHz trunked, but getting the needed funding for such an extensive system has been difficult.

Well, Ken, some time ago on rec.radio.cb, someone was encouraging the "gang" to use a particular group of HF frequencies for their free-banding. I thought the list of frequencies looked familiar, then it struck me that he had listed the trans-Pacific and trans-Atlantic HF air-to-ground channels that Aeronautical Radio, Inc., uses to track long-range commercial airline passenger flights. When I pointed that out to him, explaining that he could possibly be endangering lives by encouraging HF free-banders to utilize those frequencies, I was flamed to a crisp.

Break whatever laws you desire, but in doing so, don't infringe upon other people's welfare and well-being.

Has anyone experimented with making their computer interface with an Alinco DJ-X10 scanner? The only resources I've seen thus far have been little DOS applications.

Whether under Windows or (ideally) Linux, there must be something that could be used to even pull together your own hacked up bits to control, sync with, and even download the signals from the scanner with the appropriate accompanying analog->digital translation. I've yet to find anything even on the order of documentation of how the interfaces to to it might function.

Thanks for any tips,
B

Bill - a couple of websites I can supply:

http://www.n2nov.net

http://www.panix.com/~clay/scanning/index.html

http://www.fordyce.org/scanning/

lotsa stuff at these three!

And an antenna even IN your window should make a difference -
if you have an old pair of rabbit-ears from a TV, orient them
vertically, that is, point them opposite each other -----o----- and
then point the ends towards the ceiling and floor - collapse the rods
in a little so they're maybe 2/3's of the entire extended length. The
upper rod connects to the positive center cable, and the lower
rod to the cable ground.

```
|
|
|
o
|
|
|
```

You could probably just tape them to the glass to keep them there
and you should see a marked improvement. You may have to use
one of those little transformer thingies that allow flat 300ohm cable
to connect to coax-they come with TV's and VCR's these days, or
cost about 2-3 bucks in a Radio Shack. I just removed the flat
cable from the base of it and connected the coax directly to the
two terminals on the base of the rabbit-ears.

Another option is to buy a magnet-mount scanner antenna (about
$30 @ RS) and set it in the window on something - if you have a
metal filing cabinet, it'll make a good ground for the base to stick to,
or just get a piece of metal plate somewhere to stick it to and it'll
suffice.
Anything more than the supplied rubber duckie antenna will improve your
reception. Feel free to ask anything you wonder about.

Try to catch a callsign, and then you can check it online at the
Percon database at

http://www.perconcorp.com/datafinder/index.html

I've done this successfully several times. Also try to catch a reference
to time and details about highway numbers and such to narrow it
down.

Newsgroup: rec.radio.scanner
Date: 2001-02-11 18:36:18 UTC
From: Stephen Verbil <sverbil@usa.net>
Message-ID: <3A86DBA1.941FC52E@usa.net>
Source record: 70425

I've refrained from commenting on the flaming going back-and-forth here, but I've got to wonder to what purpose the original poster asked for the *transmit* PL tones...

Receive PL are useful ---- and helpful 'scannerists' in the area can easily discover those for themselves, and pass them on to all of us. I'm grateful for the help, and it's nice when you're scanning while visiting in big cities with lots of intermod to have the PL 'on' to avoid the grunge you otherwise will hear...

But there's only one reason I can think of right now to have the mobile transmit PLs...

And if the person 'needed it in a hurry for a project' you've got to wonder if the project was authorized --- because if it was, the radio shop can furnish the information much more quickly, reliably and *accurately*.

It's no fun DF-ing cop impersonators with modified ham portables who show up on public safety frequencies. Systems I've worked with have needed to have different PL frequencies (actually, different modes - PL vs DPL) because of those kinds of interference...

I have the following misc stuff for sale, photos available on request,
all will be sent USPS Priority Mail so add a couple bucks to help with
shipping. If you think I'm asking too much, make me an offer.

I'm offering this stuff as possibly being useful to someone before I
toss it in the garbage before I move in 2 weeks.

Radio Shack 20-014 All-band scanner antenna. This is the one that
has three separate vertical elements. I assembled it but never put it
up. I can easily unassemble it and put in the original box.
Asking $20
---

10 watt solar panel. Heavy duty case and adjustable mounting

bracket, built for lighted real estate signs. It's heavy duty to be
sure. No charge controller. Shipping weight is approx. 10 lbs.
Asking $25

Radio Shack DSP-40. No mobile bracket, box or manual.
Works fine. Asking $20

Radio Shack 20-280 amplified shortwave antenna. Used one time on a camping trip, as new with manual in original box and
a fresh 9 volt battery. Asking $20
---

2 ea. Realistic Minimus 0.6 amplified speakers. These were made to be used with walkman type personal CD players, but
I used them as amplified scanner and HT speakers.

Each requires 4-C cells or 6 volt wall wart. 4 alkaline cells runs
these for several weeks of normal use.

Asking $20 for the pair.
---

12 Volt DC soldering iron. 30 watts. Used very little.
Asking $10.
---

1 ea. ICE (Industrial Communication Engineers, LTD) Model
420
Lowpass filter, DC-30 MHz, 300 Watts PEP. Excellent
condition.
Probably the best I've used, this one really knocks down RFI
from
my HF rig. Asking $30
---
1 ea. ICE Model 300 Lightning / EMP Unit. 50/75 Ohms, 300
Watts PEP, 0.1-200 MHz. Asking $20
---
1 ea. ICE Model 434 TV Ch 3 (60-66 MHz) bandpass filter.
I used this between the cable box and the TV to reduce HF
and VHF RFI. Asking $10
---
1 ea. ICE Model 465 Telephone RFI filter, 1 or 2 line, 600
ohms.
This reduces RFI from HF thru UHF. Asking $10.
---

2 ea. SBE Secure Talk ST-2020 voice scramblers. These are
2-frequency voice inversion scramblers, desigend to be used
with cell phones, land line phones and two way radios. There

are 4 externally and 32 internally selectable scrambling
codes.

They are l unused in the box, work on 9-15 Volts DC, wall
warts,
mounting hardware and manuals are included. They have never
been out of their boxes.

I have no idea what they're worth, they are late 80's
technology
and might be useful for low-level security applications, but
I'm
pretty sure a simple voice inversion descrambler could
monitor
them.

I know they're not worth much, so make me an offer.
---

1 ea. SBE AFS8 Select-A-Call selective calling "ringer" for
FM,
AM & SSB transceivers. This late 70's technology is still

being
used mostly on commercial and fishing vessels for alert
calling
on HF and VHF. This might be more of a novelty than a useful

item, maybe it belongs in a maritime museum.

I hesitate to use the term "new" because it's over 20 years
old,
but it's unused in the box with installation and operating
manual.

Again, I doubt it's worth much so make me an offer, I'm
easy.
---

1 ea. MFJ Model 16010 antenna tuner. Tunes coax fed antennas

including mobile antennas. I used it mobile for a few years.
It was
made in the late 70's, still works fine. Asking $10.
---

1 ea. (ancient) ACME Electric voltage transformer. 95 to 125
VAC
input (selectable input with front panel voltage meter) 115
volts
output. Good for getting 115 volts from varying supply
voltages
such as generators or rural electric where the voltage is
over or
under 115 volls or varies somewhere in between. Also useful
as
an isolation transformer. 300 volt amps.
Asking $15.

Email me if interested in any of these items.

Thanks,
Jon

2929. FS Icom TV-R7100 TV/FM Adapter

Newsgroup: rec.radio.scanner
Date: 2001-02-11 19:28:18 UTC
From: David Holley <keyman@camalott.com>
Message-ID: <3A86E7D1.EE45291F@camalott.com>
Source record: 70431

For sale: Icom TV-R7100 TV Converter for R7100 &
R8500 receivers. Also provides FM stereo output from
above receivers. Like new condition with factory box,
manual and cables. $200 plus shipping. Can email pic.

Email: keyman@camalott.com

Thanks, Dave

2930. Uniden/Bearcat 200XLT scan rate mod (part # ?)

Newsgroup: rec.radio.scanner
Date: 2001-02-11 19:38:20 UTC
From: Dave Pascoe <km3t@contesting.com>
Message-ID: <MSBh6.26$9d.4089@newshog.newsread.com>
Source record: 70428

I have an old Bearcat 200XLT and want to do the increased scan rate mod. I'm looking for an appropriate ceramic resonator part number. I know Murata Erie has appropriate ceramic resonators but I don't want to order the wrong part. So if anyone has done this mod successfully and can tell me what mfr/part nunmber you used, I'd sure appreciate it.

-Dave

for sale:

a batch of 3 handie talkies, for VHF-HI, now on 173mhz
I don't know much about these, they do power up
no rubberduck antennas or batteries

all appear to be in excellent condition

50.00US (via International Postal check or certified check)

includes shipping
thanks
jpotoma@home.com

Try the FCC site. I used it years ago and it had all the sites listed that
required a license. It was by lat./long. , county, state, or application.

I found this while searching for scanner frequencies in my area. It's the best I've found for free searches.

http://www.perconcorp.com/datafinder/index.html

You can get lists for your county/state sorted by frequency/city/DBA name/etc.

>Anyone have them, or point to a FAQ?

Here you go:

Rev 15 Sep 2000

The following is the Unofficial Space Shuttle Launch Guide.

Shuttle Frequencies
==========
The Space Shuttle transmits on three frequency bands: UHF, S-Band, and

Ku-Band. The UHF frequencies are simple AM voice and are very easy to
copy. These frequencies are used for launch and landing operations,
EVA operations, and as an additional voice downlink when other
channels are in use for the current ground station has no S-Band
capability.

The frequencies in use are:
296.800 MHz : Air-to-ground, or Orbiter to suit
259.700 MHz : Air-to-ground, or suit to Orbiter
279.000 MHz : Suit-to-Orbiter, or suit-to-suit
243.000 MHz : Standard military aircraft emergency frequency

The S-Band system is one of the primary Orbiter downlink bands. The
voice channels are digital slope delta modulated and are multiplexed
in with the rest of the Orbiter telemetry and is very difficult to
copy. Much of the downlink TV is on S-Band also, but is wideband FM
and should be easy to copy.
The frequencies are:

2287.500 MHz - Primary digital downlink
2250.000 MHz - Wideband FM with either main engine analog telemetry
during launch, or TV during orbit operations.

The Ku-Band system is used in conjunction with the tracking and data
relay satellites and is used much more heavily in Spacelab flights
than in others. The data rate is very high (50 Mbit/s). These
transmissions are directed to TDRS satellites in geostationary orbit
on a frequency of 15.003 GHz.

(Information via WA3NAN, and WA4SIR)

Ed Sileo (edsileo@qnet.com) says that Shuttle audio can be heard on 169.4 MHz at Edwards Air Force Base (EAFB). The transmitter site is on Lehman Ridge on the east side of Edwards near the Astronautics Lab. This can be heard during all flights since you never know when the shuttle may land at EAFB.

Shuttle Audio Retransmissions
==========
Excerpt from the Goddard Amateur Radio Club (GARC) Shuttle Retransmission Fact Sheet (from Jim Blackwell, N3KWU, HRSBLACKWELL@deblur.gsfc.nasa.gov)

Retransmission of Shuttle air-to-ground audio from the GARC (WA3NAN) may be heard on the following frequencies:

Frequency (MHz)	Mode	Antennas
3.860	SSB LSB	N-S/E-W Dipoles
7.185	SSB LSB	N-S/E-W Dipoles
14.295	SSB USB	3-element Yagi
21.395	SSB USB	5-element Yagi
28.650	SSB USB	4-element Yagi
147.45	FM Simplex	Phased vertical

Where SSB is Single-Side-Band and LSB, USB indicate either Lower and Upper Side Band. A short-wave receiver possessing a Beat Frequency Oscillator (BFO) is needed to receive these transmissions.

GARC maintains a Bulletin Board System (BBS) which is accessible by way of the Internet, modem and packet radio. The BBS contains areas with information on the club, mail distributed by the Amateur Satellite Corporation BB (AMSAT-BB) listserver, SAREX bulletins and Space Shuttle mission information. During Shuttle missions, users can also access Keplerian Orbital Elements (Keps) which are generated by the club based on information generated by NASCOM at GSFC (these orbital elements are read over-the-air by our volunteer operators). The BBS is accessible by the following means:

1. Internet: telnet to wa3nan.gsfc.nasa.gov (128.183.105.17)
2. Telephone: (301) 286-4137 (up to 14.4 kbaud supported)
3. Packet Radio: WA3NAN on 145.090 MHz in DC area.

Just follow the login instructions. Note: Full access to the BBS is limited to members of the club.

GARC also maintains a WWW Server containing a wide variety of information about the club, its activities, as well as links to other Amateur Radio resources. The URL address is:

http://garc.gsfc.nasa.gov/www/garc-home-page.html

Excerpt from rec.radio.amateur.misc FAQ Part 3 (modified):

Shuttle audio is re-tranmitted by the following Amature Radio stations.

Station Centre VHF 10m 15m 20m 40m 80m

K6MF ARC 145.585 7.165 3.840
W1AW ARRL 147.555 28.0675 21.0675 18.0975 14.0475 7.0475

Need to be sure you are on a channel that utilizes pocsag, and not
some other paging protocol, such as flex.

set the line in level to about 3/4, then turn the volume knob on the
scanner until the sound level indicator in poc32 is somewhere between
1/3 and 1/2 (when no paging signal is present). the squelch must be
off. i have an icom r10 and although i'm not using the discriminator
output, i get around 95-99% decode success rate.

2948. PROgramit -vs- CE232

Newsgroup: rec.radio.scanner
Date: 2001-02-12 02:38:21 UTC
From: Pervert_Extraordinair <valued_customer@att.com>
Message-ID: <3A874CA3.260DD7E4@att.com>
Source record: 70347
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I'm considering the addition of either a PROgramit or CE232
to my RS 2006. A review of the websites leads me to believe the
main difference (functionally) between these two interfaces is the
PROgrammit is unidirectional while the CE232 is bidirectional.

It looks like the PROgramit allows automated channel programming
and database manipulation of the desired frequencies.

It looks like the CE232 offer the same AND the additional or
squelch-break logging and frequency look-up capability. (Plus
some user definable I/O)

Any experiences/comments regarding these two options ????

```
The following items marked in red are sold:
------------------------------------------------------------

Radio Shack 20-014 All-band scanner antenna. This is the one
that
has three separate vertical elements. I assembled it but
never put it
up. I can easily unassemble it and put in the original box.
Asking $20
------------------------------------------------------------

SOLD
10 watt solar panel. Heavy duty case and adjustable mounting

bracket, built for lighted real estate signs. It's heavy
duty to be
sure. No charge controller. Shipping weight is approx. 10
lbs.
------------------------------------------------------------

SOLD
Radio Shack DSP-40. No mobile bracket, box or manual.
Works fine.
------------------------------------------------------------

Radio Shack 20-280 amplified shortwave antenna. Used one
time on a camping trip, as new with manual in original box
and
a fresh 9 volt battery. Asking $20
------------------------------------------------------------

2 ea. Realistic Minimus 0.6 amplified speakers. These were
made to be used with walkman type personal CD players, but
I used them as amplified scanner and HT speakers.

Each requires 4-C cells or 6 volt wall wart. 4 alkaline
cells runs
these for several weeks of normal use.
Asking $20 for the pair.
------------------------------------------------------------

SOLD
12 Volt DC soldering iron. 30 watts. Used very little.
------------------------------------------------------------
```

1 ea. ICE (Industrial Communication Engineers, LTD) Model
420
Lowpass filter, DC-30 MHz, 300 Watts PEP. Excellent
condition.
Probably the best I've used, this one really knocks down RFI
from
my HF rig. Asking $30

SOLD
1 ea. ICE Model 300 Lightning / EMP Unit. 50/75 Ohms, 300
Watts PEP, 0.1-200 MHz.

SOLD
1 ea. ICE Model 434 TV Ch 3 (60-66 MHz) bandpass filter.
I used this between the cable box and the TV to reduce HF
and VHF RFI.
----
1 ea. ICE Model 465 Telephone RFI filter, 1 or 2 line, 600
ohms.
This reduces RFI from HF thru UHF. Asking $10.

SPOKEN FOR, NOT CONFIRMED SOLD YET
2 ea. SBE Secure Talk ST-2020 voice scramblers. These are
2-frequency voice inversion scramblers, desigend to be used
with cell phones, land line phones and two way radios. There

are 4 externally and 32 internally selectable scrambling
codes.

They are l unused in the box, work on 9-15 Volts DC, wall
warts,
mounting hardware and manuals are included. They have never
been out of their boxes.

I have no idea what they're worth, they are late 80's
technology
and might be useful for low-level security applications, but
I'm
pretty sure a simple voice inversion descrambler could
monitor
them.

I know they're not worth much, so make me an offer.
---

1 ea. SBE AFS8 Select-A-Call selective calling "ringer" for
FM,
AM & SSB transceivers. This late 70's technology is still
being
used mostly on commercial and fishing vessels for alert
calling
on HF and VHF. This might be more of a novelty than a useful

item, maybe it belongs in a maritime museum.

I hesitate to use the term "new" because it's over 20 years old,
but it's unused in the box with installation and operating manual.

Again, I doubt it's worth much so make me an offer, I'm easy.

SOLD
1 ea. MFJ Model 16010 antenna tuner. Tunes coax fed antennas

including mobile antennas. I used it mobile for a few years. It was
made in the late 70's, still works fine.
---

1 ea. (ancient) ACME Electric voltage transformer. 95 to 125 VAC
input (selectable input with front panel voltage meter) 115 volts
output. Good for getting 115 volts from varying supply voltages
such as generators or rural electric where the voltage is over or
under 115 volls or varies somewhere in between. Also useful as
an isolation transformer. 300 volt amps.
Asking $15.

Email me if interested in any of these items.

Thanks,
Jon

2950. Amateur Radio Newsline broadcasts

Newsgroup: rec.radio.scanner
Date: 2001-02-12 03:14:39 UTC
From: Wayne Farmer <WayneOHere@compuserve.com>
Message-ID: <967koj$p8n$1@sshuraac-i-1.production.compuserve.com>
Source record: 70350

I'm not an amateur radio operator, just a short-wave-listener and scanner listener, so I may have been out of the loop too long. Still it surprised me to hear a broadcast tonight of the "Amateur Radio Newsline" on W4DW, a 146.640 MHz repeater in my Raleigh, NC area. This was an airing of a distributed pre-recorded broadcast that went on for several minutes. It did periodically break for repeater traffic. I visited the website of the broadcast: http://www.arnewsline.org. Here's a part of what they say about the service (see http://www.arnewsline.org/nlinfo/nlwhat.html):

'NEWSLINE bulletins conform to all sections and codes as outlined under the Part 97 Amateur Radio Service rules regarding the legal means of amateur radio operators issuing "QST's" or "Bulletins of Interest to All Amateurs." We differ only in format and follow a more traditional radio "spot news" format. Whenever possible, NEWSLINE stories include the voices of the newsmakers themselves so that you can more easily understand the effect that the story will have on all radio amateurs. If you have ever heard CBS Network Radio News or NBC News on the Hour then you will be familiar with the format utilized by Newsline, with the exception that the information we provide is strictly directed to radio amateurs.'

Well, interesting. I'd never heard this sort of thing before, and had previously thought that the FCC required all audio transmissions on the ham bands to be short live conversations between amateur radio operators, on subjects related to amateur radio. Can somebody give me some background on this to help me understand what sort of broadcasting is currently allowed on the ham bands?

Wayne

2951. For Sale: Grundig YB 305 SW Radio $50

Newsgroup: rec.radio.scanner
Date: 2001-02-12 03:17:14 UTC

Grundig YB 305 SW/AM/FM radio for sale. Radio looks brand new. Comes with .carrying case, original box, owners manual, and SW guide. This is a very good beginners SW radio, very sensitive SW and AM reception No ssb reception

There is one problem with the radio.The memory frequencies can be entered and they will remain in memory for a couple of days but then memory retention is lost.

However frequencies can still be entered manually and the scan function works.

This radio is the big brother to the Radio Shack DX 375. The DX 375 is known for it's SW and MW reception and the YB 305 has the same excellent reception on those bands.

The YB 305 has nicer buttons and layout than the DX 375.

This is a very good beginners or second SW radio for someone who doesn't mind entering frequencies manually.

Asking $50 which includes shipping Priority Mail.

D. Schopp
dschopp@sprintmail.com

Notice that Newsline is "strictly directed to radio amateurs". Broadcasting is not directed. In the amateur radio service there are only a few exceptions to the no broadcasting rule. Weather information provided from the NWS may be broadcast. This benefits emergency preparedness. Amateur radio operators have also been give special permission to rebroadcast audio of space shuttle communications.

It depends on your area. Each state uses different 10 codes, and within each state they may vary slightly from agency to agency. Some agencies don't even use 10 codes any more.

You may want to check your local Ripoff Shack to see if they have a list.

Hello,

Could anyone help me with a digital version of the manual of this airband receiver?

My biggest problem is that I do not know how to get the scanner to scan/search in 25 KHz steps. The steps 50 and 100 can be selected by pressing Function and 5 or 6 on the keypad.

So far so clear, but how can I get the receiver to work in the 25 KHz step?

Any help will be highly appreciated.

Thanks,

But if you want automated, bad answers, try their website. Oh, and if they offer you one of those 'Cat' shaped bar code scanners the next time you are in a store, laugh in their faces. The new gimmick is putting special bar codes in the catalog ('Cat' shaped scanners - 'Cat'alog) and giving you a reader to encourage you to use them. Many years ago, I was a beta tester in a project to distribute code listings using a scanner and print pages of special codes in magazines. It was cumbersome, unreliable and generally a poor idea then, and it still is. As for the web site, I needed a NiCad battery. I have a catalog and already have a part number. All I want to do is order on-line. So, I try to find a way to simply enter the part number. No, the only way that is apparent to order, is to use their system. You click and wait, click and wait (you getting the picture) and are finally presented with a list of ten pages of batteries which you have to go through one-by-one until you find the one you need. Newer is NOT ALWAYS BETTER!

Dennis

If you have one of the early VT-125's 25kHz steps are not available,
just 50 and 100Khz.

The VT-125 MkII has 25kHz steps and can be selected by FUNC+4.

Hi!,

I've been playing around on this for awhile, And I noticed
that some people trash Radio Shack.(Did you get a raw
deal from them or something)??? I bought all my Radio
stuff from them,and never had a problem with them.

In 1987 I bought a 40 channel transceiver from them and
I have no problems with it, here it is 2001 and I'm still
using it (XM4138221) {Toronto,Ontario Canada}

In 1997 I bought a PRO-51 (REALISTIC) [RADIO SHACK] 200 CHANNEL DIRECT ENTRY
PROGGRAMABLE SCANNER / VHF\UHF HI-LO-AIR,I have no problems with this
either, It's 2001 and I
still use it almost every day.

Thanks for reading me Len Beecroft
at lbeecroft8041@home.com
Please reply to this as I'm wondering what your answer
will be? T.T.F.N.

I understand your theory but it just doesn't work in practice.

Here we all are, talking about this signal, but I've never heard it on the air. The amount of interest generated by a mysterious new signal will bring all sorts of people out of the woodwork who don't normally monitor government or whatever frequencies to listen & discuss it. If you're trying to find out how many people listen to your frequency, you've just ruined the experiment. I'm sure there are quite a few people such as myself making posts about the signal who haven't heard it.

Not only that, but how long do you have to transmit the signal on odd frequencies before people notice it in the first place?

And why would they really need to make an estimate of how many people may be listening in anyway? If they're technically savvy enough to invent a new, unknown signal in order to get people to talk about it, they're smart enough to realize that their radio signals can be intercepted and take measures (encryption, etc) to remedy it if needed.

I understand your theory, but I really don't believe it's the reason for the signal. Most likely, it's telemetry or something.

You should apply the theory of Occam's Razor here. Basically it means the most simple & logical explanation for an occurrence is the most likely explanation.

> stuff from them,and never had a problem with them.

It's one thing to advertise they got answers
It's another conundrum to expect them to have them
when you ask them for an answer? "DUH"?

"let me check, what is the catalogue number?"
right, you go around with these bits of info in your
pants pocket every day all the day, and when you
wash your pants...whoops? "

so for RS to be happy you do not wash your pants
no more JUST IN CASE you get asked these insipid
questions.

RS is a boner-less emporium for which sales droids are paid enough
money to catch the bus in the morning
and eat regularly at Burger King.

They hire what they can get. They will hire what comes in the door.
And lately they have been hiring those
who would have flunked kindergarten. With atittude.

One time I printed up some special forms just for RS
droids. Gave it to the numb-skull and he says, after looking it over, "what
am I to do with this/"

Told him to turn it over and there was an answer.

"duh".

RS is the pit stop for all those people who never knew what high
school was about. The wall-flowers of society. People who did not get
involved with reality. Now RS is their reality.

RS people are in limbo. LIMBO-DROIDS.

If you don't have a catalogue number....
go get one and then we will answer you.

That is what RS is about. DUMBness in a very tight
environment where boxes rule.

Boxes in the aisles. You see, there is no catalogue number on them and
so they have no idea of what to do with them. Just call the fire dept and
they will come tell them what to do with them in the aisles.

DUH? or DUH!

....

Perhaps the intellect of the employees is a bit better in Canada. Down here,
Radio Shack's staff of Salesdroids is culled from the reject pile of
applications for fast food workers and garbage collectors.

"Radio Shack...you've got questions, we've got Salesdroids."

```
The following items are still available, everything else has
been sold.
------------------------------------------------------------

Radio Shack 20-014 All-band scanner antenna. This is the one
that
has three separate vertical elements. I assembled it but
never put it
up. I can easily unassemble it and put in the original box.
Asking $20
------------------------------------------------------------

2 ea. Realistic Minimus 0.6 amplified speakers. These were
made to be used with walkman type personal CD players, but
I used them as amplified scanner and HT speakers.

Each requires 4-C cells or 6 volt wall wart. 4 alkaline
cells runs
these for several weeks of normal use.
Asking $20 for the pair.
------------------------------------------------------------

Email me if interested in any of these items.

Thanks,
Jon
```

Some people have this deluded notion that folks who sell stuff
containing electronics should know something about what they sell.
Unfortunately, anyone who knows much about the electronics they sell
would demand a far higher salary than Radio Shack or any other store
can pay.

So you get sales droids who can barely spell radio, let alone tell you
anything about a radio they're supposed to sell. Hey, that's what
you're paying for.

On the other hand, Radio Shack's ad campaign was clearly designed by
someone who doesn't understand Radio Shack's business model. "You've
got questions, we've got answers" may be true in a literal sense; but
for practical purposes, it doesn't say anything about how useful those
answers will be.

In any case, if you know what you're buying you'll find some decent
things for sale in the Radio Shack Catalog. If you don't know what
you're buying, Radio Shack's sales staff probably will not be able to
help you.

People in this news group are often new to the hobby of scanning.
Many of them do not know much about what they're buying and how it
ought to perform. They clearly need sales help, but unfortunately the
only help they get is with taking their money. They are often the
ones who complain the loudest.

Happy Scanning!

Jake Brodsky, AB3A mailto:frussle@erols.com

For sale: Pro-2006. Needs a tune up, 800 MHz reception seems

a little off from normal. Tandy quoted me a flat rate of
$59.95 to
bring it up to specs so I will deduct $100 from what I would
normally
ask so that you may have it done or do it yourself.

No box or manual, but the manual is available to download on

Radio Shack's website. $160 plus shipping. Or if you prefer,

I will have it tuned up by Tandy and add it to the total.

BC-895XLT. This scanner is absolutely mint, has
discriminator
tap. Scanner was bought new in October. With manual, box and

original accessories all as new. $140 plus shipping.

Email me or call if interested. I can accept Pay Pal.

Thanks,
Jon

You really are a dumb jackass. Please stop changing your nick so I
can stop re-killfiling your sorry ass.

Printed up some special forms??? What are you, an idiot?

The 2067 is a nice little scanner. It does Mutli-system trunking so you can listen to more than one system at a time. It also allows you to asign alpha tags to eaach chanel and/or Group ID and Bank. The only thing I have realy found That I did not like is the fact that radio shack no longer sells the special cable and software used to program this scanner more easily.

DUMB....ass. Sorry Ass. what a mind-less you must truly be. too
scared to read what you cannot imagine an answer for if I gave you a piece
of paper with the answer on it.
SMART...special forms designed with the Sales Droids in mind. Even
though I gave them all they needed on printed view...the stupid son/female
bitches still had the stupidity to "ask me what they were to do with this?"

You see boner-less, I gave them all they needed..Without having to go
through their quality education on dealing with customers the RS way. I
gave
them the item they ask all the time and they were so stupid they failed to
understand how dumb they are.

I did same for clerks behind counter at a leading car
parts company. Got tired of repeating every answer with another answer I
just gave...got tired of just walking out the door when these types got
their boners-up and their breathing heavy.

I put on my form answers as to why I was there to get what i wanted with
the least amount of dumb-ass intercourse forth. Telling come clerk at the
terminal three answers he asked three times is bit much.

They were stupefied and one even gave me an atititude
and threw the paper on floor and confronted me. He was not working there
next two day's. He got fired.

You see, he had this attitude. You have this attitude.

go milk a carton.

bill conduit
my attitude

Somehow I don't think that's going to do it for this clown. :-)

Maybe it's just his varitaion of english that makes him seem like such
a jackass, I don't know.

Anyone know how to erase your private freqs in a BCT7? I have misplaced my book and would like to delete the private freqs and don't know how.

If someone has the BCT7 manual on pdf, that would help alot.

thanks

Len,
It all depends on the store. The local Radio Shack has been very helpful to me, and the clerks really try. I live in a college town, so the clerks are all college students, which might explain their eagerness to make the extra effort. On the other hand, they are willing to admit when they don't have the knowledge needed to answer a request. On more than one occasion they have come to me with a question when I've been in the store, knowing that I have an electronics/communications background. But like I said, it depends on the store. I've been in a couple of RS stores in the Dallas/Fort Worth area where I've felt that everybody in the store, from the manager down, should have been stood up against a wall and shot. What you see is what you get.

You are lucky, I can't even program private freqs in. I think the radio is confusing. I have had it for years and never used it. One thing for certain : you need an outside tower mounted antenna to hear anything. If someone has the BCT7 manual on pdf, that would help alot, I would like one.
Please respond direct to phwray@cros.net

Yes any antenna is fine for monitoring. You won't need a preamp at all for
listening with a antenna that has good height. Just make sure you keep the
length of the coax for your antenna as short as possible.

Just crank up the speed of the "M-code".
This could have been said about the "M-code" some years ago and wouldn't it be funny if they said it again now that most requirements are being downgraded. I still copy some daily.

For the base freq. (not the handset) for a regular 25 ch. phone, yes.
Of course you may also hear buses, oil delivery trucks, and the like on this
freq.

No, the a/c loses contact with their homeplate shortly after departing on
a mission, whether SAR or interdiction. Safety of Flight monitoring is
provided with/by CAMSLANT (Communications Master Station Atlantic, in
Chesapeake VA, or it's Pacific Counterpart CAMSPAC in Pt. Reyes, CA). See
my website for the details of SAR aviation monitoring with both SSB and
VHF-Marine frequencies.

You should never go to a Radio Shack unprepared. Educate yourself on the product you are going to buy. Don't rely on someone else to do your thinking. This applies not only to Radio Shack but to any other retail establishment. Ever hear of "buyer beware"? Good day, Richard.

From the original post I quote:

"The most notable frequencies are 40.55 and 169.765 during the day (10 am -
3 pm is prime time), but occur everywhere and anywhere between 30 and 400
MHz - 24 hours a day, seven days a week."

The key is "everywhere and anywhere", Larry!

But if you don't wrap your head in aluminum foil you probably won't hear
them.

Glenn

Not quite true, but you are getting closer. Keep trying tw&#65533;.&#65533;.., you'll earn that tin star yet but first you have to be correct with what you say. Only under certain circumstances is it illegal to monitor cellular and cordless transmissions. It is done every day in the United States, completely within the law. Try again 'lil partner!

Glenn

For one thing they advertise the input power of their CB walie talkies, not the output power. So looking at the ad and catalogues many people will think the output power is twice what it really is....they now have a small prinbt chart that shows the different power levels, but next to the unit ij the catralogue they have the input power rating in bold print that is twice the RF transmit output power. A rotten way for any company to do business.

It's not so much the products Rat Shack carries,as it's the horrible
customer service.Like the time I was paying cash for some over-priced
adapter plug and had to argue with 2 different clerks that I was not
giving my phone,address, etc.They had no idea how to ring something up
without entering all the customer info.My sales slip was like this

Name: customer refused to give name
Address: the store location etc..

5 min. for a 30 second transaction.

showed my wife the sales slip and she laughed.

It'd be funny if stuff like this didn't usually happen there.

Source record: 70328

"Tommis" <Tommis2@hotmail.com> writes:

>Is there any features that the 9000 has that the 780 does not have?

The 9000 has 20 banks the 780 only 10. Both have 500 channels.
BC9000 has separate buttons for DELAY, ATT and CTCSS. On BC780 you
need to enter the menu system to toggle these.

>Is the
>780 as good of a receiver as the 9000?

Some claim it is better on UHF and 800 MHz.
On 2 meter it is definately not as good as BC9000. A side by side
comparison shows that BC780 is more sensitive to intermodulation.

I have had the chance to borrow a BC780 for a couple of days and
since I have huge problems with intermod in the 167-170 MHz region,
I decided to test the 780 up against my UBC9000, UBC3000 and AR-8200.

I hooked them all up to the same antenna (3 dB Celwave BA-1312)
using a 4-way splitter and a preamp adjusted so it just
compensated for the loss (about 7 dB) in the splitter.

I then tested every frequency between 168.400 and 169.600
in 25 kHz steps. For each frequency i rated each scanner 1 to 4:

1: No intermod or other problems at all.
2: Light interference easily cut off by normal or slightly
increased squelch setting.
3: Needing ATT to avoid interference,
4: Even ATT does not cure the problem.

As can be seen in the following results, I really have huge problems
and the BC780 does not handle them very well.

It should be emphasized that these results are for the conditions
exsisting at my place and others may get a totally different
experience. But it goes to show that in my case, the BC780
is not the best scanner ever produced.

And here are the results. A HTML version with colors are available at
http://www.dkscan.dk/scannertest/intermod.htm.

Freq. BC780 UBC9000 AR8200 UBC3000
168.400 3 2 2 1

Radio Shack sales people are the lowest.
I find pakastani and iranian convienience store clerks more intelligent and helpful.
You have to have real low expectations in life to think you deserve to work at radio shack.

Specifying input power has been a standard way of ratings for many years.
In the old days, it was hard to measure the power across a dummy load, but easy
to measure the DC voltage drop across a known cathode resistor, and plate voltages.
So certain FCC compliance laws were written that limited input power, rather than output
power.

Probably wideband, swept radar.
If not the you could have military or local government
trying to do some snooping by reading the hets off your (or your neighbor's)
IF.
If this was in the lower frequencies (right above standard AM radio I would
say it was
an ionobeacon but it's too high).
Just by luck you could be picking up a 2meter sattelite and the reason you
get the sweeping
is from doppler shift from the sattelite moving so fast, but the chances of
you picking up one
without a circular polarized antenna or at least a 2meter high gain beam are
pretty slim.

3041. Bearcat Club Question

Last Saturday, I joined the Bearcat club, the main reason was so I could get instant access to their frequency database as they advertise. Currently, I still don't have access to their database, not exactly what I call instant access! Is this typical? I didn't see an e-mail address for me to ask them about it. Does anyone out there know of an e-mail address where I can inquire about my membership? Thanks!

Nonsense. Why would they transmit a signal to snoop on if's? What the hell good would any of it do anyway?

> If this was in the lower frequencies (right above standard AM radio I
would
> say it was
> an ionobeacon but it's too high).

Again, nonsense. If you bit the hook in the first post you would know the "most notable frequencies are 40.55 and 169.765 during the day (10 am - 3 pm is prime time), but occur everywhere and anywhere between 30 and 400 MHz - 24 hours a day, seven days a week."

You have to put aluminum foil over your head to hear these signals.

If it's widespread, it's probably at a high level. If there are transmitters on a tower or mountain that have that much coverage, then it could be a spur from a badly tuned transmitter. If no terrestrial transmitters have that range, then it could be airborne. Several years ago, we had something like that, and it was impossible to track. We suspected military anti-missile or other such jamming by the Air Force, and soon after they were contacted, the noise stopped. Of course they didn't admit anything.

You need to do some detective work and logical thinking to trace this stuff. Try to get someone to look at it with a good spectrum analyzer, for example.

Really? I suppose you would be in favor of a similar penalty for operating a scanner, talking on a CB or ham transceiver, or tuning stations on a car radio?

I didn't think so.

When they start that "address and phone number" nonsense, just say "CASH!" and
put your money on the counter. If they refuse to take your cash, walk out and
advise their District Manager of the situation. These guys tend to get real
upset when their salesdroids cause paying customers to walk out and go
elsewhere.

hey i believe some people are just buying astro radios right off ebay.
http://search.ebay.com/search/search.dll?MfcISAPICommand=GetResult&ht=1&Sort
Property=MetaEndSort&query=motorola+astro

anyone whos done this, i am wondering how hard is it to get somebody to
program it. will they refuse since your a citizen, or do they program any
radios just so they can get paid? although astro radios are quite expensive
i have been thinking about it. i am just concerned how hard it would be to
have someone program it for the local sheriff and pd.

or would i be better off just waiting for awhile and seeing if this "digital
add-on board" for the bc780xlt comes out anytime soon.

thanks

wrote:

>Where can I get a control cable for the 780. Is this cable anything special
>Please help.
>

Cable is a "straight" 9-pin to 9-pin cable; i.e. it is NOT a null
modem cable.(Straight meaning that pin 1 connects to pin 1 at the
other end, pin 2 to pin 2, etc.). This is assuming that you want to
connect from computer to scanner. The connector on the back of the 780
is a DB-9 Female.Take a look at what your computer has for a serial
port, if it is DB-9 it is probably male; it might also be a DB-25 if
you are using a desktop as opposed to a notebook (most notebooks have
a DB-9 Male as their serial port connector).

If you plan to clone directly from a 780 scanner to another 780
scanner, then you WILL need a null modem adapter to plug onto one end
of the cable. Depending on the gender makeup of the null modem
adapter, you may then need a gender changer to get you back to a DB9
male at EACH end of the cable.

All of these things can be made up yourself if you are handy with
soldering iron and have lots of spare time on your hands, but you will
pay about as much for the cable and hardware as you would for the
factory-made product

I made mine up from whatever cables and adapters that the local Radio
Shack had available, rather than trying to assemble from scratch.
I ended up with the capability of cloning between scanners, or
connecting from scanner to Toshiba laptop, using the following:

1ea. 26-152 Serial RS-232C Cable, 6ft. DB9F to DB9F $9.99

2ea. 26-231 Gender changer DB9M to DB9M 5.99 11.98

1ea. 26-264 Null modem adapter DB9M to DB9F 5.99

Lots of other combinations that will end up with the same
capabilities. Just bear in mind that my list is for use with a
computer that has a DB9 Male serial port.

I've been looking for a simple, portable for a single band - the US aircraft band. The only thing I've found is the Maycom AR-108A. I've read a couple reviews of this radio and it seems to be satisfactory. Does anyone have any experience with this radio or would like to recommend a different radio?

Remember I'm looking for something simple, portable and single band if possible.

Well, at least you are consistent. You are an asshole to all people equally. I would hate to think that you saved your efforts for just one small group of people just because the work for a specific company. Don't forget you appointment tomorrow to get "NO FRIES!" tattooed on your forehead so you can avoid that question too.

By the way, for someone who at least infers a greater-than-grade-school education, you write (to put it bluntly) like an idiot. If your message here is any example of the forms you took into RS I am not surprised that they looked at you strangely and had no idea what you wanted. Do you just randomly blather like that when you are talking to people too or does this problem just occur when you try to express yourself in writing? Either way I would suggest that you seek that help of a qualified psychologist. If one can't help you with your communication problems perhaps they can at least help you with some anger management strategies to help you avoid placing any more unnecessary stress on your cardiovascular system

Source record: 70265

Just Bud <thekat@san.rxyzr.com> writes:

>As shown by your numbers, the AR8200 has MUCH more of a problem
>than the 780, and the BC3000 is much better than even the BC9000.

Thats correct. For some reason the BC3000 behaves relatively well
in my situation.

>In addition, you choose only one small range of freqs, and set up a worst-case scenario.

In my case it's the real world. The range of frequencies chosen are
those used by the police here in Denmark and thus the most popular
ones for scanner listeners here. They are the main frequencies
in all my scanners. The antenna setup is the one I use for daily
monitoring.

>While it's valid for you, I doubt many others would run into the same problem.

Exactly which is why I also wrote:

It should be emphasized that these results are for the conditions
exsisting at my place and others may get a totally different
experience. But it goes to show that in my case, the BC780
is not the best scanner ever produced.

A few days after performing my tests I visited a friend and did some
comparison there between the 780 and his 9000. Due to heavy intermod
problems he is running with bandpass filters to only let the relevant
frequencies through. Neither the 780 nor the 9000 shows any significant
intermod problems in this case. In fact it appeared that the 780 was a
little better. But a side by side comparison also showed, that some
weak signals that was received by the 9000 was not registered by the
780 at all.

>AND... most people who will buy a 780 will do so for it's trunking capabilities.

Thats true indeed. But since the original poster asked about a comparison
between BC9000 and BC780 I figured that trunking was not an issue in this
case. That is similar to the situation here in Denmark, where there
are very few trunked systems using Motorola, EDACS or LTR.

I did my test because I had read the initial reports on the 780 where
many users claimed that it is one, if not the best, radio they have
ever used also when regarding pure radio performance.
Just by hooking it up I immediately noticed that it does not have
a better receiver than previous Uniden offerings.

Lately other reports have shown up on the UnidenBC780XLT mailing
list telling about problems with selectivity.

In my opinion the BC780 should be the choice if trunking, size or
PC interface is important. Otherwise the BC9000 would be a
better alternative (it is still marketed here in Europe).

Regards
Per

3070. Trunking question

Newsgroup: rec.radio.scanner
Date: 2001-02-14 10:13:22 UTC
From: eee1@earthlink.net
Message-ID: <3a8a580a.21871420@news.earthlink.net>
Source record: 70266

I just purchased a Bearcat BC895XLT scanner, and am trying to set it up to monitor the trunking systems in this area. There are only four, five frequency systems available. My manual indicates that only one bank can be monitored in trunking mode. My question is, can I put all four systems in one bank, or should I put them in separate banks.

When scanning in normal mode, the 800 trunk frequencies sometime provide audio without being in the trunking mode. Why is that?

Thanks in advance.

You need to understand what trunking is.

First read this: http://www.qsl.net/mcraces/intrototrunking.html

And then you can go on and learn more at these sites:

http://www.strongsignals.net/htm/trunk.htm

http://home.att.net/~wwhitby/

http://www.trunkedradio.net/

The BC-7 is a Bearcat (Uniden) - look at it at the Uniden website-
they even sell them 'refurbished' - units sent back not working and
repaired for resale - supposedly a good deal from what I've heard.
It's probably www.uniden.com or www.bearcat.com

Rowan County Department of Telecommunications has put up a very nice page,
http://www.co.rowan.nc.us/telcom/scanner.htm; clicking on Rutherford County
on the map on that page will take you to
http://www.co.rowan.nc.us/telcom/ScannerLists/rutherfo.htm, which is pretty
much an FCC database dump for Rutherford County.

3076. New mailing list!!

Newsgroup: rec.radio.scanner
Date: 2001-02-14 12:16:41 UTC
From: "Chris E. Halladay" <trek5150@mediaone.net>
Message-ID: <JGui6.11105$_D.823729@typhoon.we.rr.com>
Source record: 70272

To all:

Hi!! My name is Chris. I am the list owner and moderator of a brand new scanner mailing list!! It is called "CenCalScan" and is based at Yahoo. My list is for scanner enthusiasts that live in central California (Sacramento-Los Angeles).

Once you subscribe, you can post frequencies and any breaking events that you feel would interest us!!

If you do not live in central California, please spread the word that this list is available!! I would like to see my list be as successful as possible!!

There are two ways to subscribe:

[1] Send a blank email to:
CenCalScan-subscribe@yahoogroups.com

[2] Go to the list's homepage (the web address is in my signature line below) and fill out the box with your email address.

Thanks,

--

Not anytime soon -- there are rumors that a digital board is being developed - but again these are rumors and there have been no real details as to the time of release or features/functionalities.

Plus, there are a number of different digital voice protocols out on the market today, and 1 digital board won't be able to do them all.

Expect to pay a hefty price for a limited solution - if and when something is ever released.

Goodday,

Can someone tell how the Yupiteru VT 225 airband scanner performs in comparison with a "normal" scanner like the mvt 7100?

Second question is if a 10 khz. shift usable is with the new 8.33 khz shift.

Thanks for possible answers,

Roald

I am selling a Radio Shack Pro-92 "B" version portable trunk tracker.
Brand new, never out of the box. Picked up on sale, and was able to
grab a "B" version, but never got around to using it.

$195.00 shipped via USPS Priority Mail, insured.

USPS money order and I ship right away, personal check and I ship when
the check clears.

NO COD, NO TRADES.

E-mail if interested...

I am thinking about buying one of these things, but haven't got a clue where to get one. The local electronics places seem to carry the lower end models but not this one.

Uniden's website doesn't seem to list dealers (OR have the Price of what one of these babies is going to cost me)

I've seen a few on Ebay, but I am kind of reluctant to go that route unless the seller has a really, really good rating.

I'll bet the bastards
an ARRL member too. Probably got in on the League discount membership plan.
All this started me wondering, What make a ham a ham? Is a ham someone
that's working to improve their knowledge of radio theory, electronics and
operating skills?

Well guess what guy? All of us ham have different drives. Some of you might
obsess with code practice and technical details but surprisingly there are those
of us who just enjoy the friendly banter with folks just like us from around the
world. You did recall that part of being a ham was being able to do that right?
Yes, we do good work in times of disaster and we try to be upstanding citizens but
the bottom line is we are human with human needs. Relax my friend and enjoy the
hobby your way and others will enjoy it their way. A little tolerance goes a long
way.

Darren

news:slrn98jrq6.21rs.terje@tiger.thinksec.com...

This is the last post I'll make in reference to your theory because I feel I've already wasted enough bandwidth discussing this non-issue.

> I never intended to say "this is what they're doing", but more along the lines
> of "from what little time I've spent pondering this, this is the onlything I
> can think of, and since noone else mentioned it, I thought I should".

So you think the only reason for the signal is to try to locate people listening in on scanners? A bit far-fetched to me.

> My suggestion was that it would be electronically monitored. Usenet doesn't
> enter into the picture as far as the information gathering goes.

And the cost of such a venture (equipment, man-hours, etc) would far outwiegh any possible gain that anyone could get from the effort. Who cares how many people are using scanners?

> Sure, it breaks the point of seeing how many people were originally listening
> to those frequencies, but had my theory held water (I'm sure it doesn't), then
> whoever is interesting in collecting this data would be stupid not to assume
> the signal will attract more listeners.

If you're sure that your theory doesn't hold water, why are you pressing it?

> BTW: Is it still there?

I don't know. As I said I've never heard the signal on air, and I haven't seen any recent reports from anyone hearing it.

>
> You don't need to have people notice it to get the information you want about
> initial listeners.

I don't understand this one. You don't need people to notice the signal in order to get information about them? Someone has to initially hear the signal. If they don't notice the signal, then they won't be listening to it.

>
> Actually on a intelligence/timeline scale right about now would be the
perfect
> time for people to be interested in the number of listeners.

Again, who cares who's listening?

> See, we're not at the point when many departments/organizations are
pondering
> if it's worth the investment. For that considertation knowing how many are
> actually listening in on a regular basis is very welcome information.

Nobody really cares. I work for a police department, and we know that there are a lot of people out there listening to us on scanners, but we really don't care how many. And if anyone DID care, they'd move to a digital system or use voice scrambling for secure communications.

> We're also at the point when the first people start to finally figure out
that
> digital/encrypted technology is hugely inferiour on a range of very
important
> issues, thus it's time to again calculate the need to use it.

I don't see how digital or encrypted technology is inferior to plain analog, especially with the gain of communications privacy. I won't trade my 900 MHZ digital cordless phone for a 46 MHZ analog one. And the sound quality is the same as using a hardwired phone. Granted, this is about the extent of my personal experience using 2 way digital voice communications, but I've never heard anyone using scrambled or digital systems complain.

> It would not surprise me one bit if a lot of departments/organizations
have
> started to ponder if they should keep analog, and use cellphone for
> secure/confidential messages. That is actually a better solutions for
many.

We use an analog system, but the patrol cars have cell phones in them for that purpose. Granted, it's not "secure" (unless we're using digital PCS phones, I'm not sure), but it's better than passing information over the radio.

> My theory and telemetry isn't mutually exclusive you know.

Your theory was that "they" would transmit a previously unknown signal all over the bands in order to track those who tune into it. The signal has been tentatively ID'ed as some sort of telemetry signal. It's most likely that the signal is used for telemetry and not your theory.

> Anyway, I fail to see why broadcast telemetry in the patterns it's done.

That's the reason for the interest in this signal, because it's an odd signal that's showing up all over the VHF/UHF spectrum over a certain part of the country. It's not a "normal" signal in that it shows up all over the place instead of staying on one particular frequency.

I guess basically what I'm saying is that I get where you're coming from, but your theory is more along the lines of a paranoid conspiracy theory rather than close to reality. Using all the available data, more than likely your theory is false, so we should all forget it and get on with our lives.

If I'm paying cash, I just give them a fake name & address. This causes
them to waste postage by sending out a flyer & having it returned to them.

To all:

Hi! My name is Chris. I would like to request that the URLs for scanner web sites be mailed to me. I am in the process of building a web site for my brand new scanner mailing list. The list is called "CenCalScan" and is based at Yahoo. It is for those scanner fans who live in central California (Sacramento-Los Angeles). I would like to put those links on the homepage of my list.

Thanks,

Hi All.

I have two questions about the above scanners. Is there a direct BC equivalent, like in trunk tracking and tone board in one unit other than the 780xlt? What about a BC handheld with tone and trunk track? Also I notice RS has Pro 2067 for sale on there web site, where can I find Pro 92 cheap I would prefer in Canada as its easier to ship

Thanks Joe.

I have a Uniden 780 Trunk Tracker III for sale, brand new in box.
Purchased it from Grove a couple of weeks ago just before they sold
out their stockk of 780s. Never used it.
Need to liquidate some radio equipment to pay unexpected bills.
Selling this one really hurts!

$300.00 shipped via USPS Priority Mail, insured.

US Postal Money order preferred, but if you must send a personal
check, I will wait until it clears before shipping.

NO TRADES, NO COD.

I can provide numerous references from the groups, or you can check my
eBay feedback under OFFDAN.

E-mail if interested.

Dan

They ask for your address because they are required to, it's part of there job. Here in Canada, and in the US as well I assume that they use addresses to generate their internal mailing list for flyers, catalogues, and a monthly gift certificate draw. But as a customer, you don't give a hoot, about that.

But don't just say no and leave it at that, then you are being foolish. Unless you can absolutely guarantee you will never lose a receipt. You can refuse the address portion but still give a name. That means that for at least two years, well beyond the length of manufacturers warranties on most products, they will have a record of your purchase that they can use as proof of purchase to get you warranty service, or in many cases, over the counter replacements.

Radio Shack ..... You got questions .... they got answers.

What would be nice is if they orginized those answers so that the answer was the correct one for the question you asked.
Most of the employes that work in a Radio Shack store dont know jack ... so the most often used answer is "let me ask the manager" who replies with "I dont know" or another question like "what do you want that for". Dont believe me? Go to a Radio Shack store and pick up a package with a LED in it. Tell the store attendant you want to power it with 12vdc and ask what resistor you need. Yeah .... they got answers ..... but not the right ones! It is true .... you get what you pay for.

What device would I need to mess up nearby cell phones.
One could mount it in his car and watch the fun as all the cell phones in
the nearby area became usless. That would most likly be illegal.

>Glenn
>
I did just what you said. When I used regular thickness "Reynold's" aluminum foil, nothing. When I used regular thickness "Saran" aluminum foil, I heard faint transmissions that sounded just like the ocean.

Then - brilliance struck! I used heavy duty "Reynold's" aluminum foil. I wrapped my head and extended the foil down my outstretched arms. I put a 10' diameter circle of foil on the ground below me (for a ground plane). The reception was incredible! First, nothing. Then a loud pop and I started receiving signals.

Interestingly, the signals were stronger during the thunderstorm that passed by. The signals must have been some sort of hypnosis signal, because the next thing I knew, I woke up last night in the hospital having been asleep for a couple of days. I think the entity that sent the signal did some experimenting - my hair was missing (almost like it had been burned off) and my muscles were contracting like crazy.

I can't wait to try again today. I'm going to wrap my whole body in aluminum foil and stand on my aluminum shed.

I live in southeastern Mich.Actually AnnArbor.
I have a freq for a federal prison in Milan.I guess its like the dispatcher because its only a one sided conversation.I find the conversations he has are very interesting.
If anyone could help me obtaining more freqs for the following prisons that would be great.
Milan Federal Prison> I have one at 170.875
Huron valley Mens Prison
Washtenaw County Jail

Thanks for any help.Just trying to get both sided conversations. Guess I may be only one who finds them entertaining I guess.

Email or post findings.

>still use it almost every day.

1) Hassling you over your name and address.

2) Pretending to know what they are talking about. I used to set people straight when I heard a line of bull from RS people. I gave up after a while.

3) BS about when something is due in. At one particular store the standard line about an out of stock item was that it would be in on Thursday. It rarely was. I had a friend who worked there and who told me that the truck always came on Thursday and they didn't have any idea what would be on it. They put in requests for things but what showed up was something else again. This friend was like me an Electrical Engineering major at the time. I was never sure why as he didn't seem to know much about electonics. That probably ties in with him working at RS. After he graduated he had plans to work for them full time.

4) That look you get from some of them when they've decided they aren't going to get any business from you right now. Like they stepped in something.

Now true most of these are common elsewhere too but RS seems to have raised it to an art. I have had some good experiences but they are definetly in the minority. I have to assume that these problems are a matter of corporate policy as they are too prevelant well known to be other unless the stupidity is rampant at the HQ which is also a possibility.

Maybe the guy you are hearing is transmitting with a higher power. If the
CO's are responding with low power portables, either on the same freq. or a
separate input, you may not be close enough to hear them.

I've actually come in contact with intelligent life forms in my local Radio Shacks. My pet peeve with them is their "passed as new" gear that are really returns missing lots of little accessories or some slight scratches, etc.

If you want to sell returned crap that works but is missing stuff at least offer a discount on list price and don't pass it off as new.. I also like those torn open and restapled blister packs. Then again where else are you going to go ? Buy via internet of mailorder or some little overpriced Mom and Pop store 50 miles away ? Rat Shack has no competition in the walk in world.

| >still use it almost every day.

Things I've bought from Rat Shack new

Pro-2021 on sale for $200.. Scanning would lockup if two low band vhf freqs were programmed side by side.
backlighting went dead.

PRO-34 keypad lock switch bad, PC board screws loose inside, bad solder joints on antenna BNC.

PRO-2005 backlighting quit twice, replaced volume and squelch controls, keypad spastic at times.

HTX-202 2 meter HT, battery pack stopped taking a charge after 6 months of use.

Weather Radio SAME code model:12-250 - annoying AC power hum in audio.

SAME Code Weather Radio (the white ones).. we bought about 35 of them as a group purchase for my ARES/RACES group. Always someone complaining they didn't trip off on a county wide alert even with good external antennas and a strong signal from NWS transmitter.

10db and 20db remote bullet preamps and 20db standard uhf/vhf preamp.. all of them amplify noise more than signal. finally trashed them all and replaced with Channel Master preamps.

Scanner antennas - discone - long hollow legs loosen up from wind and loose contact with mounting threads
Another scanner antenna.. plastic mounting hardware couldn't take the UV / weather after a few years .. cracked and fell apart..

VU-190 VHF/UHF antenna. Small birds sit on elements causing them to have a permament bend downwards like b-52 aircraft wings.

Radio Shack car cassette player under dash (early 1980's).. bad playback head.. sent thru warranty repair twice before they actually fixed it.

Radio Shack replacement speakers: Damaged new in box.. bent frames, torn cones. These were 12 inch woofers.

Back in the 70s/early 80s, their base CB antennas were a real joy. I
particularly liked their 5/8-wave ground plane. This was an imitation of the
famous HyGain CLR-2, but using cheaper materials.

Unlike the HyGain (which used aircraft-grade aluminum), the RS version used
whatever they could get their hands on. Result: after the first windstorm,
sections of the radiator would be bent, slid down inside the other sections, or
both. Whereas the HyGain used high-quality clamps to connect the sections, the
RS version used cheap metal screws. This required holes to be drilled in the
elements, which further fatigued and weakened the metal. Finally, whereas the
HyGain used solid-fitting, UV-resistant rubber caps at the end of top hat
elements and radials, the RS version used cheap plastic caps. These would rot
and fall off soon after the antenna was installed.

Difference in price between the two antennas? $5.00! In 1977, the CLR-2 sold
at a local CB shop for $39.95 vs the RS 5/8-wave for $34.95.

Radio Shack: you've got questions, we've got cheap imitations.

But try to tell your local lawmakers that.

The only good thing is that mobile scanner & two-way radio users are few &
far inbetween as compared to cell phone users, so hopefully they won't feel
compelled to pass a law banning scanners or two-way radios in vehicles.

Of course. But do a search for "cellular jammer" on the internet to find websites for numerous devices. Most of these are designed for fixed-station work, as in buildings. But I would love to have one as a portable device, such as a handheld radio.

As far as I know, these devices are legal for use in various countries but are still illegal for use in the US. I don't know if you could get one through customs or not.

Nothing you could purchase legally in a kit. If you're really intent
on breaking the law, why don't you get some education so they can't
catch you buying anything out of the ordinary...

How are the lawyers keeping it tied up???
APCO-25 is now open ended and not just exclusive to Motorola.

But you all said the same thing about trunktrackers years ago....and
800mhz....and 450 mhz....and High band was supposed to lock everyone out also.

Show me ONE legal argument that can be effectivly used to thwart the digital
scanners.
Cell is not a issue...
Right to monitor is not an issue...
Code protection is no longer an issue...

I just wanna see one law that says "you can't" build a digital scanner and sell
it.

Any bold takers!...how about John Macky(Rck Larson)...ot TW...I wanna here what
you PRO's say!

Mark J
(I'm not breaking up...I'm "going digital" on ya)

Right, so you can listen to those frequencies as long as you don't listen to
any phone conversations. I keep listening for stuff there, but those darn
pesky cordless phone signals keep interfering.

3175. Cabling question

Newsgroup: rec.radio.scanner
Date: 2001-02-15 23:21:42 UTC
From: S Pellegrino <spell189@excite.com>
Message-ID: <t8ootegc69c8c@corp.supernews.com>
Source record: 70173

I have two questions regarding running coax cabling...

1) I have some extra RG6 laying around after installing a sat TV system. If I used this cable and a high quality splitter could I hook two scanners up to one antenna? I am fairly certain that it won't work for transmitting, but I'm just interested in receiving. Other than the loss in the splitter will it significantly effect the receive capabilities of the scanners? If it is ok to use a splitter, will it work for one radio and two antennas simultaneously? I have heard of people using switches to select the antenna, but it would be convenient to have them both connected.

2) I know this sounds trivial, but does it effect a signal if you coil the coax? If I have extra cable from a pre-made piece of coax I always coil it in a loop about 8"-10" in diameter and zip tie it to keep it in that circle formation. Should I try to lay it flat somehow instead? My wife is on my case about wires running all over the spare bedroom so I try to neaten it up wherever I can.

Thanks,

Steve

YOu can hook the 2 scanners up using a splitter and if the frequencie ratings of the splitter are in the range you are scanning you will only loose the signal strength of the splitter. This could be a lot but if you are in a high signal strength area you will be ok. Many of the splitters are a resistor network and you are correct that transmitting would not be a very good idea, but if you can stand the loss it will be ok for receiving.

Coiling the coax has no effect provided you use a big enough coil that the center conductor does not cut into the inter insulation of the cable. That is over time if the cable is coiled very small over time the center wire will tend to cut into the inuslation and short out to the shield.

I have been successful programming my 780 with my G3/300 Mac and OS 9.1. I use Softwindows 98 and Andy's Programmer for the 780, a shareware program for the PC. The hardest part was finding, err, buying Microsoft Excel for the PC. I have a Mac serial to PC 9 pin cable that came with a Sony digital camera that I connect to my modem port and to the scanner. The port on the Softwidows is set to the specifications for Andy's software. If anyone should have any questions, please feel free to contact me. As far as I know, I am the first to do this. I have not been able to find any other information on the web.

Oh, fun, sure.

Is your idea of fun watching somebody die of a heart attack -- because
nobody can dial "911" on a cell phone?

Is your idea of fun knowing that somebody critically ill is dying -- because
their doctor can't be reached on his cell phone?

Let's all try to get along, okay?

Yes, that would be correct. Oslo to be more exact.

For all those other people:

As I've got a strict policy of not hiding on usenet, let me remind everyone
that while it might be expensive to show up at my doorstep to physically
hurt
me, at least you can call and wake me up in the middle of the night at +47
938
23 096. Oh, and remember, living in Oslo makes me an hour before GMT, so
make
sure you take that into account when trying to wake me up.

Be advised though, your calls might be monitored for quality assurance.

> Marcie is just a kid who has a wet-dream in which he believes he and Bud

So I've started to notice.

It's really a shame though. I mean, he seems to have so knowhow on the
technical side, he also seem to be quite energetic, which means he could
probably do great things if he started acting properly.

It's kind of a relief to see it's not just IRC/cracker communities that have
script kiddiez though ;)

Terje
(disclaimer: I'm not associated in any way with any cracker communities)

I don't get any mailings from there, so why should I tell them my address?
I am blind on top of all that, and couldn't read what they send to me any.
It would just go into the trash.

I have one, as long as realize it's a nearfield device and NOT a scanner all is well. i have uncovered many secrets with mine, as well as finding quite a few bootleg pirate FM band stations. With a short antenna on it..it is truly a neat device for snooping in a crowd or place like an airport.
In the big city a FM trap is a must have item as it WILL lock up on broadcast stuff like crazy.....Eddie

I disagree. Not true for the frequencies we're talking about here... yes, practical coils for HF are possible, but we're talking VHF and UHF here and there's absolutely no reason not to coil them as he is describing... even then really only issue when current is flowing on the *outside* of the shield, which is unlikely in the scanning cases we are talking about. Such coils actually "chokes" which are useful in HF to choke off currents flowing over the outside, but don't do any transformation.

Of course, at VHF and even more at UHF, the best thing to do is make the cables the right length... all you get from the extra length is extra loss..

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a team of G-men protect the president while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some models, like the early Uniden SportCats and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $1500 Icom R8500 and $2000 AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2042 and PRO-2006 base/mobiles, the Uniden/Bearcat BC895XLT, BC245XLT, SC200, and Radio Shack PRO-91 and PRO-94 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites. The ICOM IC-R2 and Yaesu VR-500 are the two smallest "pocket" scanners which perform. Both are tiny enough to fit comfortably in a shirt pocket so you can monitor without attracting undue attention.

Looking for value? At $170 discount price, the 100 channel Uniden/Bearcat BC278CLT base is a good value and available at most Sears and Best Buy stores. The Uniden Sportcat SC200 portable performs very well is an excellent value at its $220 street price.

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your

scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, http://www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance. The Premier (Prime) RD-9 and RD-9SMA are about the same length but even thinner.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas. The Austin Condor is available from Grove Enterprises.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter

and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A (available from Amateur Electronic Supply) or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is http://www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. Modifying any scanner to receive cellular phone signals is now considered illegal. By federal regulation, new scanner models must be designed to they cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the

Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (http://www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 7825 Black Street Rd., LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial

broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, http://www.grove-ent.com) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the

public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM. The PerCon Spectrum CDROM sells for under $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM, too.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)

dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes an extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an

invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

Other scanner mailing lists include: scanner@onelist.com, scan-l@onelist.com, scanner@qth.net, and sonofrcma@onelist.com.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about

4 PM. You must purchase a lunch since we get the room for

free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published on the CARMA email list, carma@qth.net. You can obtain a free electronic subscription to the CARMA email list. For more info, see:

http://www.qth.net

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Most meetings are be held on Saturdays at Phillies Pizza, 6300S. Kingery Highway, located in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook, IL.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner. The author writes a monthly
"Scanner Equipment" column for Monitoring Times magazine,
published by Grove Enterprises, but views expressed in this
article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies
is the Police Call Plus, published each year in 9 regional
volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM instead.

You can query FCC databases directly from this web page: http://www.fcc.gov/searchtools.html

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Other frequency web sites include:
http://w5gb.nmsu.edu/kc5kto/,
http://www.fordyce.org/scanning/, and
http://www.scannerway.8m.com.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'.

(See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of

information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army

Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each

equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals

weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

Uniden sells refurbished scanners dn you can check current inventory at their web site:
http://www.uniden.com/docs/store

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

You may be able to obtain manuals for older Midland scanners from:

Midland Consumer Radio Products
1670, North Topping,
Kansas City,
MO: 64120
Phone: 816-241-8500

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer the ICOM IC-R2, Uniden/Bearcat BC3000XLT, and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered at your local Radio Shack store. Each Radio Shack store has a book containing frequencies and stock numbers. The crystals are mailed to your home within 10 days.

You can also order scanner crystals from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.
Middlesex, NJ 08846
tel. 908-356-7787

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 2001 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation sells crystals, antennas, power cords, owner's manuals ($11 ea) for some older (pre-Uniden) Bearcat scanners. Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229, email: electra@tcon.net,

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553. You can also download an electronic copy of the user manual for recent Bearcat models from the Uniden web site:

http://www.uniden.com/docs/service/support.htm

Some schematic diagrams may be obtained from Uniden's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Multec Communications repairs several model Uniden scanners, but not Electra models. (http://www.rfwiz.com or email multeccomm@rfwiz.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Matt Roberds fixed a BC220 which experienced memory loss if power was removed by resoldering the positive wire to 2-AA battery holder.

As built, the BC220 logic board is grounded only through its mounting screws. In the BC220, Matt recommends adding real wire ground jumpers from the main board to the feature (logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig and Karl Klein repaired their BC210XWs by replacing the 22uF/35V C98 capacitor.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This display is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of

a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Matt Roberds repaired the Montgomery Wards version of a BC220 and contributed these insights:

"I did add some heat-sinks, but you have to be careful what you do with the TIP29 on the logic board. I added a long, flat heatsink to it and immediately created a whine in the audio. I didn't use an insulator, as this was a temporary first-try. As far as I can tell, the heatsink was radiating noise from the logic board into the front end on the radio board, which ended up being just below the heatsink. Bypassing the TIP29 (a voltage regulator) with disc ceramics didn't work; using a smaller heatsink and an insulator fixed the problem."

"There is also a 220 ohm 1/4 watt resistor on the logic board. It feeds the TIP29 from the main +16v supply. It looked a little crispy. I pulled one end and measured the current through it and it was about 30-35 mA. This works out to right at 0.2-0.25 watt dissipation. I didn't have a higher-wattage resistor, so I substituted 2 470-ohm resistors in parallel."

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to

switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855.

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, consider the receivers made by | Reach Electronics. Reach sells tone & voice pagers, Alert | monitors, and ENCODERS. They also do contract | manufacturing.

Reach Electronics |
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Another Plectron-like receiver, "The Informer," is made by |
Federal Signal and sold by Brinkley Electronics: |

Brinkley Electronics |
P.O. Box 502 |
Wallburg, NC 27373 |
(336)769-2902 |
FAX: (336)769-4029 |
email: sales@brinkleyelectronics.com |
web page: http://www.brinkleyelectronics.com |

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

COMPUTER SHOW NOTES *

Computer Central computer shows are held at the College of
DuPage, Main Arena of the Physical Education Building Park
Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5
admission with card, normal admission $6.00. Opens 9:30 am
- 3:00 pm. See http://www.computercentralshows.com web
site.

Giant Computer shows are held by Micro Media, Inc. Shows
are usually held at the Tinley Park Civic Center, 185th St.
& Harlem Ave., Tinley Park, IL or at the DuPage County Fair-
grounds, County Farm & Manchester Rds., Wheaton, IL. Admis-
sion is $6. for adults and children under 12 get in free. |
Show hours are 9:30 AM - 3 PM. To get on the mailing list
or get more information, call (708)974-3123. See

http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer
expo. The event is held monthly from 9:30 AM to 4:00 PM. |
Admission is $6 with free parking. This show features com-
puters, supplies, games, parts, software, accessories, CD-
ROM, monitors, diskettes, printers, keyboards, modems, disk
drives, cables, expansion boards, services, etc. Held in |
the Ballroom of the Holiday Inn, 6161 W. Grand Avenue, Gur- |
nee Illinois. For info, visit the web site at |
http://www.ccxpo.com.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the
RCMA Newsletter, December 1988. It may not be reproduced
in whole or in part on CDROMS, in bulletin boards,
networks, or publications which charge for service without
permission of the author. It is posted twice monthly on
the USENET groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is
difficult to use because of too much hysteresis. The
American Heritage Dictionary of the English Language
defines hysteresis as the:

o "Failure of a property changed by an external agent
to return to its original value when the cause of the
change is removed."

It's like having play in a car's steering wheel, or
backlash in a gear set. Too much hysteresis in a squelch
circuit forces one to keep the squelch at a tighter
setting, missing weaker signals when scanning or searching.
The squelch hysteresis problem was first addressed in a
1984 article about the Radio Shack PRO-24 crystal
controlled scanner.

Why do engineers design these circuits with any hysteresis?
Basically, hysteresis prevents weak signals from "popping"
the squelch open and closed rapidly, which would be very
annoying to the listener. A squelch circuit with hysteresis
requires a stronger signal to open the squelch than it does
to keep it open.

Models cursed with too much hysteresis include the
Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003,
PRO-2004, and others. Don't despair, the fix is simple for
most radios. I've successfully reduced the squelch
hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 - 2001 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)241-8742, or through your local Radio Shack store. You may be able to obtain some technical assistance from Tandy by calling (800)843-7422, option 2. The RSU (Radio Shack Unlimited) phone number is (800)-433-2024.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004, but Robert Cummings has modified an LCD from a Miller Engineering (http://www.microstru.com) experimenter's kit and fitted it to his PRO-2004. See http://home.cfl.rr.com/scan/Backlight.html for details.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the

squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad (PRO-43 keypad is RSU#10789808) may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A
crystal scanner are not working and the lamps for those
channels won't light, replace IC4 or IC5 (type 7400A).

library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

You may share information with scanner collectors via the
"vintagescanners" mailing list at:

http://www.onelist.com/group/vintagescanners

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004
Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037

Note: Reprints of Monitoring Times articles are available
for $3.00 each plus a self-addressed stamped envelope from
Grove Enterprises, 7540 Highway 64 West, Brasstown, NC
28902, tel. (800)438-8155. I don't receive any part of this
reprint fee.

ALINCO

DJ-X10T: 1998 vintage. Rugged construction - metal back.
Multimode frequency coverage 0.1 to 2000 MHz (minus cellular
bands). 20 selectable step sizes from 0.05 to 500 kHz.
Knob atop the radio clicks when rotated and serves as a VFO
knob, channel selector, and menu navigation control.
Several battery pack options for NiCd and alkaline battery
cases. Furnished with an EBP-37N 4.8 V, 700 mAH NiCd pack

and a sturdy 11 hour drop in charging stand. Loaded with firmware features and complicated to use. Two VFOs and 1200 channels in 30 banks of 40 channels each. Memory banks are cryptically designated, though you can scan combinations of banks. Each memory channel can be programmed with the frequency, an 8 character label, attenuator, a skip (lockout) flag, and mode (WFM, NFM, AM, USB, LSB, CW, AUTO). Very slow 6 ch/sec scan rate. Rescan delay is about 1 second and cannot be disabled or changed. Auto Memory Write stores up to 40 frequencies but does not check for dupes. 20 linkable search banks with labels. Up to 50 frequencies per search bank can be locked out. Digital clock with on/off timer. Battery saver can be disabled. Ability to scan or search for signals above a selectable threshold or channels with a specific mode. Band scope 7 or 40 steps wide. In short, 30 - 1000 MHz sensitivity is good, few birdies and little intermod. WFM broadcast reception very good. The DJ-X10T squelch can be set to one of 10 levels. We had to keep the squelch set to SQ3 or higher, otherwise it opens at inappropriate times, especially when the battery saver is active. The DJ-X10T instruction manual does not specify the IF (intermediate frequency) scheme. Filters inside the DJ-X10T imply 0.455, 10.7, and 45 MHz IFs. Our tests indicate a first IF of 736.25 or 275.45 MHz, depending on the frequency to which the DJ-X10T is tuned. Our DJ-X10T hears images of cellular phone signals clearly in the 1419.9 - 1444.9 MHz range, 550.9 MHz above their actual frequency. For a full review, including technical test results, see Monitoring Times, November 1998.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity,

attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

AR8200: 1998 vintage. S/N 550004 tested. Portable, high end "super" scanner covers 0.1 - 2040 MHz (minus cellular in USA version). Not a scanner for beginners. Many of the settings are made through the use of menus. Lots of features. 4 AA batteries, steel belt clip, plug-in AM antenna. 1,000 conventional channels in 20 banks, 10 temporary channels, one priority channel. Each memory channel may be programmed with frequency, label, mode, step, step-adjust, offset, attenuator enable, noise limiter, AFC, and write protect. Multi bank scanning. You can enable a 0 - 9 second rescan delay with each scan group, but not per channel. 40 pairs of search limits with labels. Offset capability for monitoring repeater input frequency. LCD display easy to read. Display and keypad backlit using green LEDs. The band scope. Shortwave reception stone deaf on shortwave when fitted with the supplied antenna or a 19" whip. Seriously overloaded on shortwave by a 132 foot long dipole unless we use the built-in attenuator. Supplied "dorsal fin" antenna for AM BCB. Scans slowly (14 channels/s). Requires more current. Audio quality is slightly above other portable scanners. Computer port. One slot for a single plug-in option: voice inversion descrambler, CTCSS search, 256 frequency tone eliminator, voice recorder and playback, or extended (slow) memory. See AOR AR8200 review by Bob Parnass,in Monitoring Times, October 1998, for review with quantitative test results.

ICOM

IC-R10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a

search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000.

Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1977 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power

transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket

and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A

query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the

part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none.

Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image

rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The

Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-91: 1998 vintage. Portable made by Uniden for Radio Shack. 150 channels in 5 banks. Can selectively follow conversations in 800 MHz Motorola trunked radio systems. Censors 823.975 - 823.95 and 894.0125 - 896.1 MHz covered by the BC235XLT. Powered by four individual AA alkaline or NiCd batteries. Power save feature. Program key. One priority channel/bank. One search bank. Direct search. Service search omits many police freqs (inc. 460 - 460.5 MHz). While connected to an outdoor antenna, our PRO-91 experiences intermodulation interference in the 161 MHz range from a paging transmitter on 158.1 MHz. IFs near 380.7, 10.85 and 0.450 MHz. See PRO-91 review by Bob Parnass, in Monitoring Times, December 1998, for review with quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per

channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date.

Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search.

No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, and 0.455. For a service manual, call SONY at (800)488-7669, and press 3. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you

find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes

FR2526 10 X X yes yes
FR2527 10 X X yes yes
FR2528 10 X X yes yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies

far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and

wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including Delphion's server:

hi,
i'm new here and i'd like to buy a scanner that i can listen to cell phone calls as well, what do u recommend ?
not something to expensive, and do u know where i can find a scanner in london?

is there a scanner that can track a specific cell phone number?
is there a scanner that can show the phone number that u got?

please answer me.
pony,

All your points are valid for bare wire, enamel coated and insulation covered wire used for baluns and inductor construction. Each turn of the wire and the RF current in that turn interacts with the elements around it. The center conductor of the coax does not get to interact with the turn next to it because of two shield layers. It does interact with the shield and that results in the impedance specification for the cable (50 ohms) looped or not. The shield in loops can interact with itself and have impact on RF current traveling up and down the length of cable. That may be more of an issue for transmitters and not receiver applications. I would have to do some research on balun construction, but I recall that coax can be used. In those cases I believe that short lengths of coax are using the center conductor and outer shield in combination to create RF transformers by the nature of two conductor (center & shield) separated by a dielectric.
mike

Jon Van Allen <kf7yn@qwest.net> wrote in message
news:3A8C5D3A.A6F04960@qwest.net...
Not quite correct. Coiling the cable certainly can have an effect, depending on how many turns, diameter of the loop, how close together the turns are and if what they are coiled around, air or something metallic.
Think about it, this is how baluns are made...
Jon
Ralph Mowery wrote:
Coiling the coax has no effect provided you use a big enough coil that the center conductor does not cut into the inter insulation of the cable. That is over time if the cable is coiled very small over time the center wire will tend to cut into the inuslation and short out to the shield.

3225. Re: Rutherford Co. NC Scanner Freq. ?

Newsgroup: rec.radio.scanner
Date: 2001-02-16 15:48:09 UTC
From: jamulter@aol.com
Message-ID: <20010216104809.17685.00001177@ng-da1.aol.com>
Source record: 70122

Tom,

I hope you find the following information helpful. I've included both the frequency and the P-L tone.

Feel free to contact me directly, with "Rutherford Co" in the header, if you are having a problem identifying a particular agency's frequency.

154.845 / 167.9 R Sheriffs Dept Primary
-- input is 155.910 / 146.2 and 167.9 --
154.860 / 151.4 R Sheriffs Dept
-- input is unconfirmed --
155.850 / 167.9 Sheriffs Dept
155.370 / 167.9 R Forest City Police
-- input is 154.755 / 167.9 --
154.205 / 167.9 R Old County Fire Dispatch
-- input was 153.770 / 167.9 --
159.165 / 77.0 R County Fire Dispatch
-- input is unconfirmed --
452.625 / 74.4 R County Fire - Link?
-- not sure of how co is using this link --
155.055 / 162.2 R County Medic Dispatch
-- input is 156.015 / 162.2 --
155.220 / 162.2 County Medics
155.340 / 162.2 Rutherford Co Hosp
155.085 / 167.9 County Public Works

On the state level, NCHP units in Rutherford and a couple of neighboring counties identify as G-xxx, where "xxx" is a three-digit number beginning with 2.

Asheville handles the area NCHP dispatching, using channel 1 (42.62 / 173.8 for dispatch, and 42.78 / 173.8 for mobiles calling back to Asheville). The high band repeater on Mt. Mitchell (channel 6, with an output on 154.680 / 131.8) might be their primary choice for wide-area coverage ... I'm not sure.

WRC / SBI have a repeater near the Hudlow area on 159.090. Dispatch from Raleigh will transmit using a tone of 203.5 on the repeater ... mobiles may use either 136.5 or 203.5 as their tone.

Why not just use the "EXCLUDE" feature to lock out the entire FM broadcast band 88-108 Mhz or are some of the harmonics a problem also?

The Ripoff Shack on-glass scanner antenna works fine. I've used one for
several years on two different vehicles. It even worked well after the whip
fell off the glass one time (luckily it fell in the bed of my pickup & I
didn't lose it!) Apparently the big plastic box that connects to the inside
of the glass contains a coil or something that picks up the signal from the
base of the whip. I doubt it would work well on low band that way, but at
800 MHZ it worked fine.

Ordered up my new BC780xlt from www.national-electronics.com this afternoon. While talking with the guy on the phone, I was trying to decide what sort of shipping to use. UPS ground? No...too slow. I want this thing NOW! So I was thinking UPS 2nd day air - today's friday so it'd get here by monday then, right? Nope. THey don't count the weekend as a day. Only option to get it here by Monday is next day air which costs $40.

Of course that is way too much for any sane person to pay for shipping, so I thought about it for a minute and said "Sure, why not"

Expensive, yes, but hey...I'll have my new toy Monday by 10:30am!

As most of you know by now, Deja.com has been sold and the name changed to Google.

Notice that, as currently structured under Google, the new system does not allow postiing...only retrieving of previously-archived messages.

Me thinks someone got smart and realized the huge potential legal liability of all the libelous and defamatory content which has been posted anonymously from deja.com.

Much of this crapola has been posted in the radio newsgroups over the past few years. Good riddance!

3233. FS : Uniden BC 780 XLT Trunk Tracker III - SOLD!

This scanner has been SOLD, thanks to all who responded.

I have a Uniden 780 Trunk Tracker III for sale, brand new in box.
Purchased it from Grove a couple of weeks ago just before they sold
out their stockk of 780s. Never used it.
Need to liquidate some radio equipment to pay unexpected bills.
Selling this one really hurts!

$300.00 shipped via USPS Priority Mail, insured.

US Postal Money order preferred, but if you must send a personal
check, I will wait until it clears before shipping.

NO TRADES, NO COD.

I can provide numerous references from the groups, or you can check my
eBay feedback under OFFDAN.

E-mail if interested.

Dan

I need to buy a couple of covers for my two scanners, either leather or cordura. I tried to find a couple of places handling them by inputting it into the search engine but did not come up with anyone. anybody know where I can buy them?
Thanks, wrfort@sprynet.com

3237. REPOST: PROgramit -vs- CE232, need advice

Newsgroup: rec.radio.scanner
Date: 2001-02-16 23:27:47 UTC
From: Pervert_Extraordinair <valued_customer@att.com>
Message-ID: <3A8DB779.62912700@att.com>
Source record: 70134
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I'm considering the addition of either a PROgramit or CE232
to my RS 2006. A review of the websites leads me to believe the
main difference (functionally) between these two interfaces is the
PROgrammit is unidirectional while the CE232 is bidirectional.

It looks like the PROgramit allows automated channel programming
and database manipulation of the desired frequencies.

It looks like the CE232 offer the same AND the additional or
squelch-break logging and frequency look-up capability. (Plus
some user definable I/O)

Any experiences/comments regarding these two options ????

Is the CE232 still available? The C. Cheeks hasn't returned my EMAIL
query and the web site looks "deserted".

<Followup set to alt.radio.scanner>

Source record: 70137

Forgive me for asking what I'm sure is a FAQ. I'm in the middle of stumbling around some websites and figured I'd post here as well while I'm still on a decent internet feed.

New scanner user, just picked up an RS handheld (I know, I know) on a whim at lunch. Staring to study for an FAA PPL cert and I want to listed to ATC. I live in Sonoma County, California, and its relatively hilly here. While there are numerous airports, aircraft, etc. in about a 60-mile vicinity, driving around with my scanner on didn't do much for me at all. I've got just a tab bit of experience with 2-meter and CB, and I figure the best way to extend this scanner's usability is with a better antenna.

Need a god antenna for my auto, but possibly as well one for my apartment, something indoor.

Can I expect to see a decent increase in range and sensitivity by adding a decent antenna instead of using the included duckie? I don't want to start a which is better war, but are there any highly-regarded auto magnet mount antennas that work particularly well with low end handheld scanners?

Thanks all.

By far. You'll notice a huge increase in signal strength with a good mobile antenna. A good base antenna mounted as high as possible is a must at home.

> I don't want to
> start a which is better war, but are there any highly-regarded auto magnet
> mount antennas that work particularly well with low end handheld scanners?

Radio Shack has several different antennas which should work well. Any ham radio or business band antenna would work, but these may cost more and will probably be designed solely for a single band. However you will probably have better signals with one than a rubber duck. You can even use a CB antenna as a scanner antenna, but if you listen to more UHF comms than Low-VHF, I'd short out any loading coils on the antenna.

Well if everyone in your area uses analog cell phones ? They are going out of vogue due to the fact they are expensive as most carriers have made the switch to digital. Plus even if you find a scanner that will receive cell calls it's very difficult to track a specific call from start to finish almost impossible. Get a good scanner as reviewed in various internet sites and forget cell calls they are plain boring !!!

I guess that my 2006 and 2004 that has last years and years is just a
piece a junk. Even though there is STILL nonstop cell activity I don't
necessarily listen to it but can see why people would like it. Whether
they are boring that is for the person doing it to decide. It is in only
my opinion but I consider my scanners (2004 and 2006) to be better than
most of todays scanners. Except my 780 which is terrific. Is there a
definition of a good scanner?

Definitely audible in NE Pennsylvania. Sounds like packet bursts.
Have any Public Safety departments there recently acquired MDTs? Just a
suggestion.
Hearing a lot of Morse IDs lately also.
By the way, I hear Orange County loud and clear and most of these signals
are on Orange frequencies.

Even a poor antenna will work better if you get it up in the air or
outside your car. Handheld radios are subject to overload, however, so
if you're in a high RF area, you may get interference if you have too
much gain. For a cheap, handy mag mount for your car, get one of those
magnetic mike hangers from Radio Shack, bend the bracket out a bit, and
put a BNC connecter on it, with coax and fitting to run through the
window. Put your rubber duckie on that, slap it on your car roof, and
hook the coax to your scanner. You'll be amazed how much difference
it'll make, and it's cheap and can be put in the glove box when you're
not using it.

"Wesley R. fortman" <wrfort@sprynet.com> enthralled us all in
<3A8DB2CB.5C3A23EB@sprynet.com>:

>I need to buy a couple of covers for my two scanners, either leather or
>cordura. I tried to find a couple of places handling them by inputting
>it into the search engine but did not come up with anyone. anybody know
>where I can buy them?
>Thanks, wrfort@sprynet.com
>

Two questions, which might help people to help you:
- what scanners have you got (makes & models)
- where are you (which country, or if in the US, which state)?

Need troubleshooting articles or information for sentimental favorite Radio Shack 2004 (was my father's). Already have vol 1&2 /Bill Cheek's Radio Mod books and Realistic Service Manual but haven't been successful as yet. Any additional info or assistance would be appreciated (photocopy and/or shipping expense will be reimbursed, if necessary).

Thank You,

Steve

"dani" <pony_i@hotmail.com> enthralled us all in
<96ie8k$2iu$1@newsg3.svr.pol.co.uk>:

>hi,
>i'm new here and i'd like to buy a scanner that i can listen to cell phone
>calls as well, what do u recommend ?

I would recommend that you don't! The UK police turn a blind eye to most
scanning, with the exception of two areas:
- listening into police bands
- listening into cell phone calls

Do not think "I'll never be caught" because it happens! If you are
listening to (eg) air band, then although technically it is illegal in the
UK (you are only allowed to legally listen to the public broadcast
frequencies, ie radio stations), the police will *generally* not prosecute
as long as you are discrete.

>not something to expensive, and do u know where i can find a scanner in
>london?

Have you looked in the radio/electronics shops down Tottenham Court Road
area? They may have them.

Personally, I just contacted Stewart Aviation... they know their stuff in
my experience, are efficient...
http://www.stewart-aviation.co.uk/rs/index.html

>
>is there a scanner that can track a specific cell phone number?

afaik, no

>is there a scanner that can show the phone number that u got?

afaik, no.

Taxi frequencies fun to listen to, when nothing else on
scanner to listen to.(using a PRO-51 Radio Shack scanner).

What do other people do for fun on a slow scanner night?

send reply to Len
Thank-You

I think you're confusing "digital" and "encrypted". AFAIK, it is perfectly legal to listen to an unencrypted transmission. Digitally encrypted communications are another story.

Here in the UK it is technically illegal to listen to any transmissions
except the public radio stations on FM and AM... although as a rule, the
authorities would *usually* not worry about any other broadcast signals
being listened to, with the exception of the emergency services
transmissions & 'personal' transmissions such as cell phones, etc, which
they view in a different light!

Hi all

Can anyone tell me how to fix my old scanner...I guess a lightning strike caused the front end to fry and the only time it picks up a signal is if its close by ..It will pick up a portable phone signal for about 200 feet and thats it.
Can someone direct me to a site that has and info on self repair ? I used to do it a number of years ago but havent
done it lately..not much help on the Uniden site or sams
Thanks

3287. BC100XLT Problems!

Newsgroup: rec.radio.scanner
Date: 2001-02-17 23:55:09 UTC
From: GLOVER BRIAN <belenus@home.com>
Message-ID: <3A8F0E25.12A0DD12@home.com>
Source record: 70085

I have BC 100XLT scanner which won't let me
change frequencys or unlock channels.
I didn't use it for a while (couple of months)
and when I tried to overwrite existing frequencys
with new ones, it gives me an "ERROR".
So I went to channels that are empty to try there,
but they're locked out, and I can't unlock them.
I don't have a manual, as I bought the scanner preowned.
Any help, anyone can give, will be greatly appreciated.
Brian.

With the BC250 powered on, press CLOCK.
Enter the time using the keypad, then press E.

Example:

press CLOCK
press 1234 (for 12:34)
press E

To change the display back to frequency, press CLOCK again.

Looking for an old, crystal-type Robyn scanner, model "Robyn 3-bander"in
non-working condition for parts only.It is the one with the 16 tiny red
incandescent channel indicator lights and the 3 colored "band" lights.Needed
for parts only so need not work but should be electronically complete.
Will buy yours outright or, have lots of scanner PARTS (both for xtal AND
programmable scanners) that might be arranged for a TRADE.
Please contact me DIRECTLY at KLARRG@AOL.COM if you have one to make
necessary arrangements.

Thank You ! Klarrg@aol.com (LarryW.)

> He emailed me also and it is plain as day that he thinks you , MARCIE are a
> punk-ass kid.

First of all, let me just state that I strongly recent you abusing my name like this. I have never, and will never, call "marcie" a punk-ass kid.

Now tha that's said and out of the way, let me just remind those of you with nothing better to do than following this thread about what I was trying to say.

It seems to me mark has a bit of a potential, at least he seems to be clued above average on topics related to this newsgroup (above average for a person, I'm not the right guy to judge if he's above/below average for the group).

He seems to be throwing away a lot of what could be on the other hand, and I know from experience that he would be a lot happier should he simply choose to grow up and start acting his age, as well as face his own limitations and try to grow.

I'm not trying to tell him how to live his life, nor to offend him in any way. It's just that he's currently acting way below his potential, and showing all the signs of a person not realizing that internet resources are powerful utilities, with real people in them.

I'm sure he is a very nice person IRL, most of people are when you get to know them, but right now he could use a good look at himself.

The reason I'm writing this is that I've had somewhat success talking to others which resemble him in the past, and I am simply hoping my advice can be useful.

Finally, let me remind everyone that anything said and posted on usenet or other online resources including but not limited to mailing lists, irc and chat pages are stored indefinitively, and it's quite common to google for information about individuals one is considering dating/hiring/whatever, and even for no other reason that that it might be smart to think twice before posting. All usenet posts are trackable, most with even trivial techniques.

Please accept this post in the spirit in which it was intended.

Terje

These are the most common frequency pairs that are in use by the various
Fast Food Chains across the USA:

==========

Fast Food Frequency Pairs for the United States

The frequency pairs marked with an "*" are either odd or missing.

Headset/Speaker frequency pairing for VHF-low / VHF-high band:

Speaker Headset

30.840 - 154.570 Very common pair
31.000 - 170.305
31.240 - 151.745
31.325 - 151.865 *
31.400 - 154.515 *
33.140 - 151.895
33.140 - 170.305 *
33.160 - 154.515 Very common pair
33.400 - 154.540 Very common pair
33.400 - 154.570 *
35.020 - 154.490 *
35.020 - 151.895 *
35.020 - 154.600 Very common pair
35.120 - 151.775
35.880 - 151.835
35.960 - 151.805

Headset/Speaker frequency pairing for VHF-high band:

Speaker Headset

151.715 - 169.445
151.775 - 171.905
154.570 - 170.245 Very common pair
154.600 - 171.105 Very common pair
154.600 - 170.245 *

Headset/Speaker frequency pairing for UHF band:

Newer UHF Systems by HM Electronis

Speaker Headset

457.5125 - 468.4875
457.5250 - 467.8250 *
457.5375 - 468.3875 Very common pair
457.6000 - 467.7500 *
457.6125 - 469.8875

Older UHF System by Panasonic

Speaker Headset

457.5125 - 467.7375
457.5250 - 467.7500
457.5375 - 467.7625
457.5500 - 467.7750 Very common pair
457.5625 - 467.7875
457.5750 - 467.8000
457.5875 - 467.8125
457.6000 - 467.8250
457.6125 - 467.8375

462.7625 - 467.8875

460.8875 - 465.8875
461.0375 - 466.0375
461.0875 - 466.0875
461.1125 - 466.1125
461.2875 - 466.2875
461.5375 - 462.1625 *
461.5375 - 466.5375
462.1625 - 467.1625
464.9625 - 469.9625
464.9875 - 469.9875

469.0125 - 464.0125 Very common pair
469.0375 - 464.0375
469.0625 - 464.0625
469.0875 - 464.0875
469.1125 - 464.1125
469.1375 - 464.1375
469.1625 - 464.1625
469.1875 - 464.1875
469.2125 - 464.2125
469.2375 - 464.2375
469.2625 - 464.2625
469.2875 - 464.2875
469.3125 - 464.3125
469.3375 - 464.3375
469.3625 - 464.3625

469.3875 - 464.3875

Headset/Speaker frequency pairing for ISM band Wide FM (3M Headsets):

Speaker Headset

920.0125 - 903.0125
920.0250 - 903.0250
. .
. .
921.0000 - 904.0000
. .
. .
921.9750 - 904.9750
921.9875 - 904.9875

Headset/Speaker frequency pairing for ISM band (HM Electronics):

Speaker Headset

902.0125 - 926.0125
902.0250 - 926.0250
. .
. .
903.0000 - 927.0000
. .
. .
903.9750 - 927.9750
903.9875 - 927.9875

==========

CTCSS PL Tones used by various Headsets for Internal and External Comms

Outside Inside

77.0 162.2
88.5 123.0 Most Common PL Tones used by HM Electronics
88.5 77.0 Most Common PL Tones used by HM Electronics UHF
100.0 131.8
107.2 141.3

3303. FS : Radio Shack Pro-92 B portable trunk tracker - SOLD

Newsgroup: rec.radio.scanner
Date: 2001-02-18 05:46:20 UTC
From: dconti2@bellatlantic.net
Message-ID: <3a8f60bf.1670377@news5.bellatlantic.net>
Source record: 70001
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.swap

This scanner has been SOLD, thanks to all who replied....

I am selling a Radio Shack Pro-92 "B" version portable trunk tracker.
Brand new, never out of the box. Picked up on sale, and was able to
grab a "B" version, but never got around to using it.

$195.00 shipped via USPS Priority Mail, insured.

USPS money order and I ship right away, personal check and I ship when
the check clears.

NO COD, NO TRADES.

E-mail if interested...

Dan

Taxis can be so-so. I live in a 3 college city and that of course means lots of bars. quite a few of them use radios to let the bouncers keep in touch. Now these guys are a hoot. Not always polite and politically correct though! the problem with taxi freqs here is that the largest company in town went to a computerised dispatch system recently. On a busy night they will have a handful of operators working non-stop on the phones and punching in the calls, that means that the dispatcher is on just about continuously. That loses it's excitement real fast. In the summer we get a little traffic on the seaway.

The "ripoff" thing just shows poor character Tom, the shack gets enough crap from people that don't like it. The "Hitler Channel" however, truly disgusts me. I don't think that WW II veterans, or survivors of Nazi occupation of European countries would consider this as humour.

There are things that are funny, but a psychopathic, fascist, mass murderer does not fit into that category.

Hi,
can someone please help me. I have a yupiteru MVT-3300EU hand-held scanner but unfortunately it does NOT pick up frequencies between 170MHz and 300MHz and it also only goes as low as 66MHz and I would like to get as low as 26MHz.
Is there an amplifier that will make it possible to pick up these frequencies and if so how much and where can I get one from.

Thanks

Gaz

Actually I feel justified in calling them "Ripoff Shack" because I purchased
one of their DX-394's which is a poorly designed shortwave receiver.
Luckily I didn't pay their initial asking price of $400. But for what I did
pay for it, it should have performed much better. It performs little better
than a cheaper portable. I was lucky to sell it, but not for what I paid
for it.

As far as the History Channel, people call it the Hitler Channel because
they have a large amount of WWII documentaries on there. I'm not trying to
glorify Hitler or belittle the conflict. In fact I find a lot of the WWII
stuff fascinating, especially when they talk about espionage during WWII.

San Francisco is using a Motorola Type II Trunked System:

http://www.geocities.com/CapeCanaveral/6298/sf/freq.html

The talkgroups for SFPD are available at:

http://www.geocities.com/CapeCanaveral/6298/sf/sfpd.html

The talkgroups for SFFD are available at:

http://www.geocities.com/CapeCanaveral/6298/sf/sffd.html

All of the CHP frequencies are available at:

http://www.geocities.com/CapeCanaveral/6298/chp/colors.html
http://www.geocities.com/CapeCanaveral/6298/chp/dispatch.html

CHP is using the Pink channel Base 42.440 Mobile 42.760 PL 131.8
for the San Francisco area.

Source record: 70019

Well Tom, I could say I felt justified in calling you a racist, nazi, anti-Semitic, bigoted scumbag (which I don't, but it is a good example right?) but because I felt justified to do so doesn't mean that it is right OR that I should do it.

People call African Americans niggers and call Jews kikes, so should we do it too? I think not. Lets try to forget what other people do or what you think is justified and think a little bit more about what you would hope others would say about you if they were unhappy with something you sold them or didn't like your politics/race/religion.

If you bought a product that did not meet your needs and you kept it you got ripped off, but nobody else is responsible for that but you. Not Radio Shack or any of its employees.

Bottom line, what happened at RS and what you see on the History Channel has absolutely nothing to do with this. The issue here is how you Tom Sevart express yourself. You were insulting and inconsiderate of others feelings and you response to being told that was to justify your actions with anecdotes and references to what "other people" do. Other people rape their kids and beat their wives Tom, so where do you draw the line in accepting what other people do as being suitable grounds for the acceptability of emulating their behaviour (not to say that you would do this, but hey . . . other people do it so . . .). We are not people we are individuals who should govern their behaviour first and foremost with the hope that we are acting as we would hope that "other people" would act and not as they actually do. If we do that, then we become the "people" whose behaviour others emulate. Forget the "what a wonderful world that would be" crap and just think about how nice it would be for you personally if that was the way it was and act accordingly.

My PRO-2004 had somewhat better intermod immunity than
the PRO-2005 and PRO-2006. However, the
PRO-2004 was not as sensitive.

It worked flawlessly when I sold it a few months ago.

WEll just get some copper wire clean one end of it and ether go to rat shack
and buy a bnc connector or the connector you need and insert the copper wire
on one end solder it and listen to thoes freqs,, if you dont wanna buy it
find a transformer and take it apart and unwind the wire and get one stinkin
long scanner antenna, it works for me an i get the low freqs,
my scanner goes down to 0.100 Mhz and up to 2.0 Ghz

it works well for very low freqs

Hi Folks!

I've begun the initial beta rollout of a new Trunked Radio Information Database for trunking system information, frequency, and talkgroup information for Trunked Radio Systems across the nation.

Many moons ago, my web page had a nationwide focus, but I had to scale back to a Southeast US focus due to the amount of time and energy it took to manage all the data. Now that I have been able to develop and implement a back-end database to store and present the data, I'm now able to re-position the site as a nationwide information service.

Some of the benefits of this new database when completed include:

- Presentation of all talkgroup formats for all systems (Hex, DEC, AFS, etc)
- Back to a nationwide presence from the SE US Presence.
- Common "Look and Feel" for all trunking data.
- Integration of the Motorola sysid index with all the data
- Addition of related links, and contributor information

I've currently rolled out the State of Texas as part of this beta. To take a look at the new database with Texas information, see http://www.trunkedradio.net

If you have any information that you would like to see added to the database (for ANY system in the nation), feel free to forward to me, and you'll see it show up when the beta is expanded to other states in the nation.

Many thanks!

Lindsay Blanton

If you want a cheap and easy to build antenna that works good on the bands you listen to you might want to check this out.
I have used this antenna for many years. A diagram of the antenna with very sparse instructions can be found at http://kb7pkc.homestead.com If you need more help or clarification let me know.

Since many of your scanner listeners are also GMRS folks...

I'd like to extend an invitation to all GMRS repeater owners to submit their repeater data to this new online GMRS repeater directory. In addition to helping users find repeaters to use, it will also serve as a means to help coordinate repeaters. Once you submit your data, you can edit it at any time.

Also, the entire database can be download in text format for import into a spreadsheet for travelling or to use on your personal web site.

Online GMRS Repeater Directory:

Thanks Tommis for those great frequencies.

Way back when ..... we used to go to a Sonic drive in restruant that used intercom speakers to take orders. We found that a CB radio would transmit into that system and everything you said came out over the speakers. Boy ..... did we have some fun with that. I have often wondered if you parked close to a bar that had a live band ..... could you get into their sound system.

It's actually a copy of one of my older lists from several years back. I have made several updates to it over the past couple of years. I've found that it's much easier to just maintain a list of common frequency pairs. As you can see the list can be quite long when you list them by the actually restaurant chains.

The majority of the Fast Food chains across the USA can be found on one of the following frequencies:

30.8400 --- 154.5700
33.1600 --- 154.5150
33.4000 --- 154.5400
35.0200 --- 154.6000
154.5700 --- 170.2450
154.6000 --- 171.1050
457.5125 --- 468.4875
457.5375 --- 468.3875
457.6125 --- 469.8875
457.5500 --- 467.7750
457.6000 --- 467.8250
469.0125 --- 464.0125

A fairly current list of Fast Food frequencies is avaiable at the following http://www.grove-ent.com/EXfastfood.html

>Did you actually read the site?

Yes I did dick wad.

>They're still in the process of developing the system.

They tell you that at the start: "Search Newsgroups (Beta)". Nice of
YOU to assume I may have missed that.

>Give them some time before you start bitching and whining.

WHO THE FUCK are U? Ruler supreme who tells people what they can think,
and do? If I feel like commenting about Google so be it, it wasn't a
bitch and whining thing, it was a comment as I see things. Don't ever
tell someone that you know best for them. If enough people didn't like
their site that much and emailed them now, while they're in the process
of setting up their site it might actually cause them to rethink the way
they had set things up and make changes to the site.

>At least you don't have to load a ton of banner ads when you load the >site.

For now, give them a while to start recouping the money they spent
buying Deja. If you don't want tons of banner ads use an ad killer or
http://www.altavista.com/cgi-bin/query?text for text only searches
unfortunately their news groups search is through Google

Message-ID: <3A90AB90.5C82F1B8@sprintmail.com>
Source record: 70043

Years ago Ramsey made a surface mount crystal controlled FM TX for the 2

meter band. It was surface mount on a 1''x2.5'' board.

Does anyone still make kit something like this kit that is crystal
controlled it does not necessarily have to be surface mount but the
smaller the better.

Or if some one has one of these kits and they don't use it any more,
Please contact me!

Thanks & 73's,

Jeff

Try the wireless mic freqs. 169-216MHz, usually the unused VHF-Hi TV
frequencies in the area (channels 7-13).

Below is a brief answer. Here is what happened to the person
you are asking about. (the highlights)

First... He was kicked off of the Scan-L list by the moderator for abuse.

Then...He was kicked off of his (Cable-TV) ISP for abuse.

Then... He had another run in with the law and was arrested for
selling illegal electronic equipment by Federal Authorities.

Then... He (as a -self proclaimed- successful business owner & "Engineer")
was asking people for donations because he was using a public defender & had
no health or legal insurance.

Then.... he died of cancer this last summer.

I wonder if the Bush administration will have the guts to propose some much-needed changes in the ADA?

I have no problem with reasonable accomodations being made for those who are truly disabled, but something needs to be done to curb the tide of abuses.

For instance, alcoholism is now considered a "disability?" There are documented cases of pilots flying while intoxicated and the airlines NOT firing them, due to threats of "discrimination" lawsuits under the ADA if they do.

Just another example of what a junk society ours has become.

Source record: 69962

I recently purchased an Alinco DJ-V5 handheld radio that I have been using to scan the 900 mHz range. I usually hear a lot of trafic around 950-970 mHz, but little in the lower 900 range. All of the frequency listing on the internet seem to include only the 900-927 range. What kind of phones am I hearing? Are there any lists out there for these frequencies that I am hearing? Thanks,

Nathan

Back in the late 70s-early 80s, this was easy to do. Unlike today's wireless systems, Sonic and A&W both used the old wired intercoim systems. The long lengths of connecting wire made a GREAT antenna for receiving interferring signals...such as that of an overpowered mobile CB rig, for example!

You'll likely get a better price if you buy via mail order (Grove, etc.) Best
price is likely to be realized at a local hamfest. A vendor at Orlando
Hamcation was selling brand new 780s last weekend for $330.00. Haven't seen
them this cheap anywhere else.

Why not file a formal complaint with your local government agency? Have some do-gooder politician then suggest that cab drivers be required to take "sensitivity training" and "cultural diversity classes" as a requirement of their license renewal.

It's most likely going to be Wide FM.

> I would like to try to hear it, I understand it's been heard all over
> the country.

I've heard several remote broadcast pickups in the 11 meter band when
the skip is rolling in during the afternoon.

>
> Any other active frequencies in this range that I might try for?

The remote broadcast frequencies in the 11 meter band are:

25.87 25.91 25.95 25.99 26.03 26.07 26.09 26.11 26.13
26.15 26.17 26.19 26.21 26.23 26.25 26.27 26.29 26.31
26.33 26.35 26.37 26.39 26.41 26.43 26.45 26.47

Feel better? :-) If that wasn't just an exercise you will be disappointed. Really. It is Mackey and he will use any dreadful, disrespectful or ugly bait to get a response, any response from anyone. You don't have to take my word for it. It is easy enough to prove.

You are using Outlook Express. Make a 'Message Rule' to highlight the folks you feel are causing the grief around here. Watch it for a while and a story will unfold. There are two types in these flamefests. About 30 people that enter and exit these spats over a period of time. They will ALWAYS BE HIGHLIGHTED in your newsreader. One Message Rule and these folks (you can include me) will NEVER be seen on your newsreader again. Then on the other side of the fence is Mackey and his make believe supporters. If you kill file their screen name it won't last but it cuts down on the screen clutter to keep it refreshed. They change names like the weather. It is usually easier to use keywords in the rules. I only know Mackey is spewing when I see a response to his drivel.

You are correct though, ignore and have fun with the radios instead.

Glenn

If it's data what format MFM, NRZ,etc. Telemetry from a radiosonde. The scope sample isn't enough. I listen to the sound and it reminded me of RADAR.I spent a few years aboard a small frigate warmin my butt by a mil-receiver and heard alot of sigs like that.Get that cold op site up and running and all kinds of weird spurous noises blowin' out till that puppy warms up. I love the blue arcing from cracked insulation.

Then again with heavy winds wiping through transmission lines or power lines, I've heard intermittant hums like that; or a power transformer going south on a pole somewhere. It's great conditions for QRP.

There's not enough sample to really tell. You need acouple samples to see the framing.

Glenn - This writer never mentioned you (or me for that matter) so
why are you immediately attempting to shed blame from yourself
& convince him that someone else (me) is the problem.

And why is it that so many people are always annoyed & fed up with you?

Glenn <glenn.hansen@usa.net> wrote
> Feel better? :-) If that wasn't just an exercise you will be
disappointed.

First you say "As usual, I'm not going to play your games, glenn.. This will be my last reply to you for this yr.."

You know what a public newsgroup is don't you BD??? DUH!

Now back to Whine Because People Don't Do It Like BD Thinks They Should. Do with our star!

Take it away.....BD!!!!!!!!

Plonk!

Glenn

BTW, you can have your last now Whine BD. I give you permission.

Keep in mind though, next time you make a public spectacle with your Whine Because People Don't Do It Like BD Thinks They Should. Do I might comment to such. Tough luck BD. Don't whine or IGNORE ME!!!

2BTW, why the cross post to rec.scanners BD, this was about your anal HI HI! Desperate of bad advise form you buddy!

and is that why he banned you from access to the scannrradio forum on
fidonet over 5 years ago?

is that why you were removed from access on several BBS systems because
of you
abusive behavior?

is that why you have systemaicallt attacked him on this newsgroup for
more than 3 years
up to the time of his death?

Is this why, when others slap you in the face with the truth, that you
back-peddle and
deny any and/or everything?

Hate to tell you joghn, too many of us have long memories.....

3412. Race Scanners -- suggestions /"Audio-Modified"??

Newsgroup: rec.radio.scanner
Date: 2001-02-20 05:06:04 UTC
From: Ross Hashana <rhashana@hotmail.com>
Message-ID: <0Xmk6.8407$Ki.31214@quark.idirect.com>
Source record: 69910
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Am interested in getting a scanner for use at auto races. Have been to some sites (www.racescan.com , www.racescanners.com , www.racingelectronics.com , www.racingradios.com) - and it looks like the Uniden Sportcat SC-180B & SC-200, the Relm HS200 and the RE-2000-Alpha are the most popular choices for the race enthusiast. This will be my first scanner, and I don't want to pay a lot for one (probably will get used/refurb/demo), but want something that is easy to use at the track. I'm leaning towards the SC-180B right now (price is right).. though is 100channels sufficient?
I also saw that RadioShack has(/had?) a PRO-89 'Nascar Race Scanner' model that even has "Car#" buttons on specifically for racing. Is this a gimmick, or is it really a decent scanner? Are there any other "Race" models out there that I should take a look at?

Btw-- I noticed most of the above sites mention that their scanners are "Audio Modified". I presume this means that the volume output has been upped as race-fans have to contend with noisy cars. How easy is this mod? Is it something I could do myself to an un-modded model?

Thanks in advance,
R. Hashana

3413. Small BC780XLT Gripe...

Newsgroup: rec.radio.scanner

Message-ID: <spu39ts681l5svpa7dbt30apdlicvb0i3s@4ax.com>
Source record: 69911

I got my unit this morning and so far I think it's great, except for one little thing I noticed tonight.

On the handheld units I've had, I've always plugged in a pair of headphones to listen at night, and the sound's always come out of both sides. But on this thing, the output is only from one.

I know, it's no big deal, but it's kind of annoying. I figure that problem can be solved though with a doohickie from Radio shack.

3414. 245 battery connector

Drinking a beer over bran flakes won't change the fact your comments were offensive to me. Once again in your attempt at a brush off you have done it again. I was not amused by your pun, I was just disappointed. It was absolutely unnecessary to remind us again of Adolf Hitler, but you did anyway. All I can do is wonder why?

You apparently did not take any time to consider how others might interpret your words. You thought it was frivolous and funny and assumed that the rest of the world would think so too. I don't. I did not take your earlier comment lightly, nor do I take this one lightly.

Why don't you take a minute to consider that there are many of us out here that do not know your life story or have any context into which to place your comments.

You will note that I have managed to reply to your message without even a hint of sarcasm or suggestion of your resorting to intoxication to deal with your disagreement with what I consider to be acceptable.

Hi all,

I just purchased a Radio Shack Pro-79. Its a great scanner and I really enjoy it. I'm a little disappointed in its sensitivity, but that's likely do to my location and the fact that I've yet to build a decent antenna for it.

I have a question. I have a very old, very reliable, HTX-202 VHF 2-way. Its ancient, but its my old standby.

Using a variety of store-bought and 5-minute hack antennas, I am able to get *far* better reception of the 144-146mhz bands with the 202 than I am with the 79. Why is this? Is my "brand new hip technology vs ancient old stuff" reasoning flawed? Is the 202 better suited since its dedicated to this band? More tuned or sensitive receiver? Considering its the same size and 2x the weight of the scanner, I can imagine there is a great deal of electronics inside since it only does 1 band and the scanner does so many.

Then again, the weight could be vacuum tubes (of course not that bad, but you get the point).

In short, why does an ancient beat up ham radio outperform my brand new millenium tech scanner?

Thanks!

Jason

Check at someplace that takes NiCad batteries for recycling, like Radio Shack. They generally cut the leads off and throw them away. These connectors are also used on cordless phone batteries.

[snip]

I'd recommend getting at least 200 channels. You may be at an event
where there are two series. You can put one into channels 1-100, and
the other in 101-200.

>Btw-- I noticed most of the above sites mention that their scanners are
>"Audio Modified". I presume this means that the volume output has been upped
>as race-fans have to contend with noisy cars. How easy is this mod? Is it
>something I could do myself to an un-modded model?

If that's what audio modified means, it's a very bad idea. You'll
wreck your hearing. You should get a good headset with a Noise
Reduction Rating of at least 25 dB. That will bring the car noise
down to where you can hear the scanner at a safe listening level.

If the headset does not have a NRR, don't buy it.

If you're interested in modding something, get a good set of hearing
protectors and stuff the earpieces from a set of lightweight
headphones into them. That's what I did, and am very happy with the
results.

Out of interest, how? My electronics knowledge is rather iffy, but is
it possible to pick up what frequency a scanner is listening to, in
the same you can pick up what channel a TV is tuned to?

The 202 is optimized to pickup 2 meter ham band so excels in this arena, compared to the internal scanner design . Scanners are full of compromises because of the wide bandwidth they must receive as well as tight compartment all the electronics have to be squished into... this may not hold true for the megabucks high end scanners.

I've been told that my old dual band ICOM 3200-A ham radio is better at receiving the 2m / 440 ham bands than many newer dual band ICOMs because in an attempt to lure buyers the new rigs try to include scanner features which compromises intermod rejection, etc.

If you think the 202 is crusty old you should see some of the 25 year old HTs still being dragged along to ham radio meetings. duct tape and bailing wire holds them together. Some close to twice the size and weight of the 202.. big and ugly enough to fend off a hungry pit bull.

I tried to ship a radio this morning via UPS from Canada to the US. UPS tells me that they will not insure "personal belongings" or "used items". This is the first time I've come across this. And I also notice that the shipping rate seemed to have doubled from what it had been on previous occasions (even with the insurance) making them seemingly more expensive then equivalent service provided by Federal Express and others. What gives?

I'd like to know what couriers others use and why. (Also, if I cannot ship via UPS, I'll also ask my vendors not to ship to me via UPS -- no point in giving them business.)

It may be possible by tuning into the IF of the scanner. But first you'd have to know what scanner is in use since not all of them have 10.7 MHZ IF's.

Theoretically it could be possible, but extremely difficult/expensive in practice. The way most people get caught is by either telling everyone what they heard or walking around with the scanner's volume going at full blast. At a hamfest a couple years ago, a guy was walking around with his scanner listening to cell phones. He had the volume turned up loud enough that you could hear the scanner from at least 30 feet away. Not a smart idea.

Discretion is the key.

I don't know of any newsgroups, but there is the milcom mailing list. I
believe you subscribe through majordomo@qth.net.

The WUN mailing list is for HF utility stations, and military comms are
discussed provided they are on HF. You can subscribe to WUN by sending an
email to majordomo@qth.net with the words "subscribe wun" in the message
body.

What you're trying to say is, some clumsy UPS driver could drop your parcel
and kick it down the street, and because it contained either a 2nd hand item
or personal belonging you can't claim any compensation from them for the
damaged goods?

Sounds somewhat unreasonable.

UPS insurance hasn't applied to damage of a used item for at least a couple years, but last I knew, it would apply if the item was stolen while it was in their care, custody and control.

I'm told the U.S. post office is no better.

If the item you're shipping is valuable, it makes sense to box it up with plenty of bubble wrap and styrofoam, then put that box in a larger one with a couple inches of crush space on each side, with more styrofoam.

Some shipping facilities can also do "foam in place".

When you're done, if you shake the package, you shouldn't hear or feel anything moving around inside.

It can be heard very far away. I live in Sweden and I hear it often in the
autum/winter afternoons (local time)

One correction, it's NARROW FM, not wide - and you can pick it up with
an AM detector, just tune off frequency a bit - say to 25.873 MHz.

Same thing happened to me. I took it back. I now have two Isotrons.
80/40 meter and 20/15/10 meter. They work. I mounted them on 2 5
foot masts held by 2 roof top tripods. They're standing in my dining
room right now. I do have to use a tuner now though.

Judging from there website, it seems one can insure a package with FedEx. However, I haven't tried it yet. One can certainly insure a package with Canada Post, but I fear having to put in any claim with them as it could take a very long time to resolve.

That's exactly what I am saying -- fact is, you cannot purchase
insurance on the item in the first place.

Just to add. I like to put fragile on every side of the box even though
it isn't fragile. If it will stop one King Kong carrier employee from
stomping on the box,well then, it was worth it.

Sorry, I should have been more clear about it.

For example, listening to air band at air shows and at air ports may be OK,
but if you are wandering down the street past a couple of coppers, they may
pull you in!

Also, listening to it in public at a loud volume (as mentioned by Nick) is
one way of getting caught... people you annoy are more likely to report you
than people who can't hear what you are listening to!

In Canada, I could insure "personal" goods shipped by UPS until most
recently.

> I'm told the U.S. post office is no better.

This will not make any difference should they "lose" your package.
Nonetheless, the advice you give is good, even when the goods are
insured -- you are not likely to succeed on a damage claim if it can be
established that you were negligent in the packaging.

Not that this is true of other carriers or still true of Canada Post,
but I've been told years ago that packages marked "fragile" received
"special" treatment from Canada Post, if you know what I mean.

Thanks Tom. I'm signed up on the MilCom list server. I am interested trying to monitor the transport of the Space Shuttle Atlantis from California to Florida. I live in Lubbock, TX which is kind of right in between so I figured I might catch some of the communications as it flys over.

Do you (or anyone) know what frequencies they would be most likely to utilize?

When the "coppers" begin to look interested, you hit the priority switch
set for the weather stn and if asked you tell them that it is a weather
radio. Just a thought ...

I understand that FedEx now has a ground service. I suppose that if you are not concerned with when "It Absolutely Has to be There," then it might be an option to explore. I am not certain that FedEx Ground service is available to Canada. The FedEx website was not clear on that.

The only problem is that here in the UK, they have the right to look
through your banks ("reasonable suspicion") and if *any* emergency
frequencies are found there, you face confiscation of equipment and a
possible fine (iirc)

I've been warned that putting "Fragile" on the box makes the package more likely to be used in the "Who can toss the box the farthest" competition.

I have been told that at the Can-Am convention of North American Postal
Employees this "sport" enjoys its own special standing worthy of an
Olympic Medal, It seems International Bi-lateral Cooperation takes
a new high in Low when marked Fragile. It seems between New Orleans
to Toronto somebody must be going "for the GOLD".

I can't really comment on Royal Mail here in the UK, I have sent vinyl records in the post without fragile labels and they have arrived at the destination without being beaten up, but having worked at a UPS depot (part time when I was a student)things are always being dropped, kicked, or drop-kicked around the warehouse.......

Michael,

The best way to go from Canada to USA is air parcel post through the postal service. That way there are no brokerage fees, and they don't care about whether items are used or not. The down side is that the insurance only covers lost items, and not damage. So, you need to make sure that you pack anything super good. Air parcel to the USA is around 7 days. The other alternatives are extremely expensive if you want to avoid brokerage fees. That's my experience after shipping to USA for over 5 years or so.

Chris

Yes it is available in Canada (in the larger provinces and to
anywhere in the US.). I think I may give this a try next time.

I have found the good ol' USPS to be quite satisfactory especially when
sending items to be insured. Of course, they're no FedEx!

Too bad about damage insurance. Do you know if there is a limit
on the size of the package? Also, re brokerage fees, I thought
those were only avoided if the "value" of the package is under a
given amount. Is this not the case?

Thanks.

I've seen it! I used to run the Starbucks world headquarters mailroom and we shipped and received around 4,000 UPS packages a week! Stuff would come in with tire tracks over them... just amazing. I'd always joke about the "jet ran over this one" when delivering some of them!

Also, just for kicks, Starbucks UPS account had been negotiated for $7 Next Day Air up to 1 pound and $4 2nd Day Air up to two pounds.

I never get that rate when using UPS privately!

Good luck!

Due to my experience in shipping domestic and world wide, I'll pipe in and say I had a MUCH easier time with the USPS paying up than with the other couriers. But as far as timliness goes (overnight) the USPS is about 50/50 compared to FedEx and UPS who were literally 99.9%. I had to track those

things and was always amazed at the accuracy they kept.

Of course, when it comes to Ground shipping, all bets are off again. I'd recommend USPS Priority Mail over ground shipping with a major courier.

Speaking of Canada, I can highly recommend Purolator as a courier from the US to Canada.... they are much better at the customs and their customer service is first rate.

I do not work for them!

Not to scare you guys, but they DO throw them. All of them, surely. But
the worst guys are the delivery guys, from my experience. They are the ones
who the time deadline ultimately relies... the final carrier and they want
to get that thing OUT of their truck and get back on the road!

Mine is a "Canadian" version (Has the "Realistic" brand and says
"Distributed in Canada by Intertan Canada Ltd." on the back).
Mine does not have the "A" in the serial number nor does it have
the "A" in the model number. It was successfully modified.

The "A" in the serial number isn't a good sign. According to
Bill Cheek's "The Ultimate Scanner", it's not modifiable. In
addition, I believe the latter, ummodifiable PRO-43A's were
branded with "Radio Shack" as opposed to "Realistic". In
addition, check for the date code inside the battery compartment
-- if it is 2A4 or ealier, it is modifiable. The general
consensus is that those with a date code of 4A4 or later are not
modifiable but this is not strickly true -- mine has a 10A4 date
code. The best indicator seems to be whether there is an "A" or
not.

I knew a guy who worked at the local UPS hub here in Louisville. They take the boxes marked FRAGILE and throw them extra hard then laugh when they hear CRASH! Tinkle...Tinkle...

There is something about this guy that just makes me want to
cringe.
I can't explain it... he's just sick in the head the way he carries
on and on and on and on and on and on year after year after
year.
When will he face it that he is beaten and just go away.
Its creepy.

Fedex Ground is what used to be RPS, and it is handled in Canada by
Canparcel I believe, I know it works the other way (Fedex Ground
handles CanParcel in the USA)...
>
Aslo you might consider using Mail. If it is less then 4 pounds, you
can use Global Air Mail, which is reasonably fast, and duty/taxes are
rarely assessed. Uses the little Green customs form.

Hi,
Turn on the BC-250 and press MANUAL. Next, press TIME, enter the correct time using the keypad: hours first, then minutes and seconds, and finally press ENTER to complete the operation.
I have two Bearcat 250's, both of which I bought at hamfests. One cost $10, and it came with no accessories, save for the power cord. However, it still works great 5 years later. I paid $30 for the second one, and it turned out to be a complete basket case. However, it came with the original box, and all of the original accessories, including the manual.

I use Federal Express ground service only now rather than UPS.
Seems to be a little less expensive and they have yet to charge the
"oversize package charges" that UPS charges.

The problem with those dated 3A4 is that some are modifiable and
some not. But that "A" in the serial number is a concern.
That's about all I can tell you.

Hmm... this is an odd one. Are you sure it isn't a Canadian thing? I shipped a package using UPS (nothing else in town except USPS) last Friday, and they still had the standard $100 insurance on your package at no charge. I got $400 worth of insurance on the package for $1.20.

I've never had a problem with UPS except that locally their customer service desk has some odd hours, only open from like 5:30 PM to 6:45 PM Monday - Friday. And since I work odd hours makes it inconvenient for them to deliver packages in the evening, so they always want to ship it back after two tries at delivery.

Luckily, in the States we're still able to listen to public safety frequencies. If we're walking down the street listening to the local PD, there's nothing the police can do about it. In fact, we know that people are listening and don't really care. A lot of police department official websites have radio frequencies listed on them. We've even been helped by scanner listeners now & then.

> Also, listening to it in public at a loud volume (as mentioned by Nick) is
> one way of getting caught... people you annoy are more likely to report
you
> than people who can't hear what you are listening to!

Like I said, discretion is the key. Walking around with your scanner in a coat pocket while listening with a pair of walkman headphones will attract little attention. But the doofus I mentioned in an earlier post walking around listening to cell phones with volume up loud made me want to slap the crap out of him. People like that give scanner listeners a bad name.

I like the Radio Shed "on the glass" antenna but (as always) I have one complaint. I like to monitor the CHP here in California. Their repeaters output in the 39-42 MHz range. The reception in that band is terrible on all of my radios in that band. Once you get above 100 MHz though, it's a great antenna in the 900 MHz range.

It could be a "Canadian" thing -- I don't know. As I said, the
change is recent. Also, this change coincides with significant
price increases and UPS seems a lot less friendly on the phone.
A change in management? It's too bad. UPS service was good
here.

Is this a new policy (or just enforcement of an old policy)? I just shipped a "used item" about two months ago and insured it to the max. They didn't say anything at the time about not insuring "used items."

In fact, I told the person it was "used," but very valuable, when I dropped it off. Perhaps because it was used (or maybe because I had purchased so much insurance), she said she had to look at the item first. With that, she opened the box, checked out the packing, sealed the box back up, and threw it on the belt behind her. No problem at all.

I agree with you. If this is their policy, I'll switch to another carrier.

In addition, an employee in a bad mood, and a box marked fragile, is a very poor combination. In general, I prefer the low-profile approach - nothing to make my box stand out for "special treatment." Let the employee take his aggression out on the box next to mine (the one marked "fragile").

Sounds like one of those silly rules that can only be gotten away with in Canada.
I don't blame you for avoiding UPS. They break almost everything. Either things show
up in perfect shape (which is rare) or the boxes are so beaten up that even if there is no
physical sign of damage, I wouldn't accept electronics because of how bounced around and
smooshed they have been.

YMMV. Some municipalities (like Rochester, NY) have ordinances that
prohibit portable public service scanning.

> around listening to cell phones with volume up loud made me want to slap

I suppose you could effect a citizen's arrest. He was, after all,
committing a felony in your presence.

I'd have rather just slapped the crap out of him. He just didn't seem to
get it. And the thing is that there were people walking around with cell
phones, also.

If you must listen to cell phones, please do it discretely. All we need is
more sensational headlines of someone getting caught listening to cell
phones with a scanner. This is part of what's behind the ECPA now.

Oh I forgot to mention that the package contained a used radio. They didn't
ask if it were new or used, nor did they ask what was in it.

You may try Ebay.com for possibles.

The frequency range is common, pretty close to the Business Band / MURS
http://www.expage.com/murs

You should have little problems finding what you seek on Ebay.

Best of luck

>I tried to ship a radio this morning via UPS from Canada to the US. UPS
>tells me that they will not insure "personal belongings" or "used
>items".

I would say use the Post Office and insure it with them.

Hate to say it but almost every Ship Co, has a disclaimer in regards to used
items;
most will not give you more than $100 (US) for an item that is used or being
returned for service (Got that from the Airborne Express Airbill: real small
type on the back of the forms)

There are tons of compaines that ship but from my understanding some use larger
compaines to do the actual ship job.

Best,

Wow, for that many trips into the thesaurus it would be nice if you actually said something.

I was not attempting to enforce "post modernist PC" whatever that is, sounds like a bad scrabble answer to me. Personally I thought he was a closet anti-Semite. I was also tired of his crying over products that he had purchased that did not live up to his expectations, but he kept anyways so he could complain about it.

Just becuase I did not start my reply be calling him a fucking faggot or a "post modernist PC" doesn't mean I am either PC or subject to a victim mentality. The author is not dead, he is alive and when queried continues to blather. Given that Nazis enjoy putting semi-intellectual deconstructive semioticians against the wall too, I would think that it would be at least of passing interest. Or are you just cutting and pasting your posts from the word power page in readers digest?

For what its worth I was convinced that Tom had no idea what I was talking about after his first response. I just had a bet with a friend at work that if I poked at Tom again he would say hitler. I should have specified a per-instance condition, I could have made another 20 bucks.

Nope, not at all. I have nothing against Jewish people or the Jewish religion. I also think that Hitler was the most evil man in history. But I do feel that you're overly sensitive and are way too easily offended simply because I referred to the History Channel as the "Hitler Channel." It's done soley as a joke because the History Channel has so many WWII documentaries, not to praise Hitler or belittle WWII.

> I was also tired of his crying over products that he had
> purchased that did not live up to his expectations, but he kept
anyways so
> he could complain about it.

I was not crying over buying the DX-394. I mentioned that as justification for calling Radio Shack "Ripoff Shack." I was very disappointed in the performance of this receiver, and if you go back & read my post, I said that I sold it. And I have several other Radio Shack products that I feel have been overpriced, including the antenna I mentioned in the post which started this whole mess.

> The author is not dead, he is alive and when queried continues
> to blather.

I'm not blathering. I'm simply trying to explain to you the puns that I made. You are the one who brought up all that stuff about wife beating, etc.

> For what its worth I was convinced that Tom had no idea what I was
talking
> about after his first response. I just had a bet with a friend at
work that
> if I poked at Tom again he would say hitler. I should have

Actually I know quite well what you are talking about. You are offended because I used the phrases "Ripoff Shack" and "Hitler Channel." They are simple puns. That's it. You are the one that is too easily offended. I am not going to apoligize for what I said. Just because you read way too much into those puns is no fault of mine. You seem almost disappointed that I haven't gone off on an

anti-semetic rant. I'm sure deep down you probably believed (or still do) that just because I mentioned Hitler that I'm a neo-nazi scumbag. If that's the case, then you should start a movement to get the History Channel taken off the air.

As I said, if you're that offended at the mention of Hitler, I hope you never do watch the History Channel. I'm sure you'd go apopleptic. Would it also offend you if I made jokes about Charles Manson or Jeffrey Dahmer? If you can't make fun of evil people, who can you make fun of?

This is the very last post I'm going to make about this. I believe that you are way too easily offended to use Usenet. Nothing I said was in any way intended to offend anyone, except perhaps Radio Shack. I'm not here to offend anyone, but I can't help it if you take offense at a simple mention of an evil man.

Unfortunately, the best scanner antennas are ones that you have to climb on the roof & install. A good external antenna is a must with a scanner. If you get another antenna that plugs into the back of the radio, it's not going to be much better than the one you replaced.

However, I believe Grove has some telescopic whips for handheld radios that might work a little better than the small whip included with the scanner. These are whips with BNC connectors on the bottom, so you'll probably need to get a right angle BNC connector to connect to the back of the scanner. Check out http://www.grove-ent.com/ANT19.html. Unfortunately they don't have a photo.

I'm not sure who else has these.

Wow, I never even thought of that! I will fiddle with how much I
extend the antenna and see if that makes a difference on different
bands.

Another thing I've found that helped - moving the scanner off the
computer desk.

I guess that means if I had posted a reply saying I worked for radio shack
you would have admitted that you had been offensive, but if I said that I
was Jewish and half of my family was killed by Hitler you would have still
felt justified in making jokes about it.

>Can someone tell me how I can automatically bypass or filter out these
>kids that get in our NG which should be informative as well as
>enjoyable. I'm using Outlook not Outlook Express.

afaik, you can't use Outlook for reading News groups... and according to
the header to your post, you *are* using OE:
:: X-Newsreader: Microsoft Outlook Express 5.00.3018.1300
:: X-MimeOLE: Produced By Microsoft MimeOLE V5.00.3018.1300

Outlook's help says:
"If you have not previously set up a newsreader, Outlook automatically sets
up the Outlook Express Newsreader. If you have set up a different
newsreader, you can still start your newsreader from within Outlook. To
start the default newsreader, click the View menu, point to Go To, and then
click News." (Outlook 2000)

What's happening is that you are still using OE!

Technically it has no more than 15 minutes of use. I did modify it for
cell and speed and verified operability.
Whatever use was done was with the light off. It has the light
off-on not the dimmer switch. So that is alot better
and will keep the light strong. Everything complete in the box. I
have sold alot of scanners on here. You will be
in awe! Price is $385 plus $15 shipping with insurance,Priority
mail. If you want to use Paypal please add $8 for
fees. Personal checks must clear. Please email
bruceinomaha@yahoo.com . Please no trades. thanks

I did some poking around the FCC database a few weeks and came across
the following licence application for the XFL (actual name XFL LLC).

http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/uls_lic_res.hts?db_id=19&rows=25&sndx=XFLC&
radio_serv=

These frequnecies are licenced for the following cites which can also be
found on their web page at http://www.xfl.com/tickets.html

Birmingham, AL (Birmingham Thunderbolts)
Chicago, IL (Chicago Enforcers)
East Rutherford, NJ (New York/New Jersey Hitmen)
Las Vegas, NV (Las Vegas Outlaws)
Los Angeles, CA (Los Angeles Xtreme)
Memphis, TN (Memphis Maniax)
Orlando, FL (Orlando Rage)
San Francisco, CA (San Francisco Demons)

ï¿½ Area: RADIOHOBBY
ï¿½ï¿½ï¿½

measure.

I took my UHF Micor on 443.575 and 103.5 Hz PL and l loaded it in my truck.
I called Justin on the phone and called him to confirm that this was still a
plan (me puttting the temp repeater in place of 449). He said fine. This
to me appeared OK as Justin has said many times that it was his repeater and,
after all, his call is on it so I was speaking to the licensee.

I had not used the temp repeater since the Seaside Ham convention, but it
ran fine that entire weekend as it had for the last 3 years. I went to the
site, Neil was not home. I went in and found the 449 micor. I then noticed
that a fused lead was plugged in to one side of the ES/Anderson connector.
I unpluged that lead and un-hooked my antenna from that repeater and hooked
them both to my repeater. I did not use the loaner antenna that Wayne has
provided me as it was not easy to get at and there was no need to use a
directional when my omni was available.

One accident did happen, apparently I set the Micor down on the fuse holder
for the transport to the hill and broke the fuse holder. Unfortunately I
did not have another fuse holder with me. I stripped the wires an hooked them
up direct. (what would the rest of you have done alone at a site with a
piece of gear that had always worked? I'll bet the same).

My Micor smoked.

I disconnected everything when I saw the smoke from the Micor.

As I said above, I am sorry about the supply. But, I would rather deal with
2 pass transisters than a smoked Micor. I got the shorter end of the stick
I think.

During all this my own repeater site has had SERIOUS problems. My antennas
were acting up so I replaced the antenna and it broke 10 days later. In the

mean time my climbing strap for my belt disappeared further handicapping
any rescue efforts for my antenna situation.

So I asked Neil to borrow the belt. I have been to his house 3 times to get
it as it was supposed to be left in the garage. It has NEVER been there every
time I have went for it. One day Neil called and said that Wayne told him to
tell me to order the transistors and pay for them. Strange, only the day
before I had spoken to Wayne and told him I felt guilty about the
situation and I was going to give him a UHF Micor that he was going to pay
me $25 for. Neil said he wanted the transistors in a week. I told Neil if
he wanted them that quick that we had better try to find NTE's thru
Norvac because every time I order thru Motorola it takes at least 2 weeks and
these transistors were NOT coded that they were available for immediate
ship, indicating it could be 2-3 weeks before they leave Motorola. This
was according to my Motorola Parts Program that Motorola has supplied to me.
I also informed Neil that I still needed the strap for the climb. We agreed
that I would come up that evening after my job interview. He would leave the
belt in the garage. He would check availability of the transisters and call
me back at to wether I should order them. That nite the belt was not there
and I never received a call from Neil. Neil was not home. I called every
1/2 hour starting at 9 PM. I called at 11Pm just before MASH on 49 and again
at 11:30 PM after MASH. (His answering machine was NOT on) Finally at 11:30
Neil was home, he hung up on me. Either it was an accident, or very rude
treatment and totally uncalled for. To date, I DO NOT KNOW IF I AM supposed
to order the transistors or not.

I did find my climbing belt strap the next day, lucky me.

This evening I was told by Justin that I don't understand polarity or how
to wire ES/ANderson connectors. Snide remarks that I blew everything

up have
also been made by a few individuals. Some of what I have heard has
been
insulting or damm close. I fail to see what blamimg or
finger-pointing will
accomplish.

With the exception of Neil, I have more years of experience at ham
radio
communications than all the other hams put together that run ham gear
out
of Neil's site. I have put more repeaters on the air than anyone else
there
too, except for Neil. In fact I can say that I remember going to Wes
Allen
to buy ES connectors even before they were wrote about in QST and
before
Antronics sold them and then quit business. I was in High school at
the time,
I graduated in 1983 so it was probably back to 1982 or so.

If nothing else my Extra Class & Commercial General Radiotelephone
should
speak
that I am, at the very least, competant.

Also, I do know how to install them correctly. With the A upside down
the
red/positive should be on the right and black/negative on the left.
In the
situation here these rules were not followed. Normally, a
non-standard setup
warrants a note or tag but there was none posted here. Another safety
rule
was not followed, a large fuse (or at lease a circuit breaker) should
have
been on the output of the power supply. (that could have saved it)

After this I attempted to get my 442.100 repeater at Neil's running
since
nothing else on UHF was. I wanted to figure out where the audio
problem was
coming from (all that buzzing crap and low audio). I hooked up the
loaner
that I received from Wayne while my antenna was being used. I also
put a
bird in line and saw 8 watts reflected with 15 watts forward. NOT
good.

I wonder if that has been my problem all along since we all know that
RF has
to go somewhere if not down the feedline to the antenna.

Well Wayne you can have your antenna and I'll take mine back, you &
Justin
have often said my antenna is crap anyway.

Again, I am sorry for any involvment I may have had. However, I did
speak
to the repeater licensee, Justin. I question if someone
else was involved in this situation at the site because there seem to
be some issues that don't equate right. Does anyone else have any
insight
to that?

I have heard several rumors of finger-pointing and blamimg and I
really hope
that all ends because I don't see what good it does. I at times have
felt
that I attempted to assist the situation and got shit on for it. I
don't
feel that is a healthy thing to have going on since we are all friends
and
fellow amateurs. Helping each other is what this is supposed to be
all about.
Neil has set a standard to be commended, he allows us to use his site
which
helps us all. We probably don't thank him for that often enough.
Thank you
Neil. I hope we can all help each other in the same way Neil has
demonstrated.

I have one and I love it. Not much in MODs that you can do with it. I have a special antenna cut to the 460 freq range because I use mine to monitor Houston PD & Fire down here in Houston. Like I said, Not much in the MOD catagory but a great little mobil scanner. Enjoy yours.

The following information was recently posted at the Openness.org website. The site is an advocate stage for the advancement and preservation of open public safety communication systems. If you are concerned about losing access to public safety communications in your community, make yourself a part of this campaign today. Newstips, links, and other information may all be sent to tips@openness.org:

NEW SCANNERS DENY ACCESS

Since Clermont County recently went to a new emergency-communication system, two groups can no longer listen in to police and fire scanner dispatches: the public and the media. (more)

http://enquirer.com/editions/2001/02/13/loc_new_scanners_deny.html

RADIO BLACK SPOTS `PUT LIVES AT RISK'

The State Government's $248 million emergency radio network has been questioned by Country Fire Service volunteers, who say lives are at risk because "black spots" leave them unable to receive up to 90 per cent of pager messages...

http://www.theadvertiser.com.au/common/story_page/0,4511,1734375%5E2682,00.html

GET READY FOR SILENCE SCANNER BUFFS

Atlantic city is moving towards a closed system. However, information posted at Stronsignals.net indicates that the system will not be scanner-hostile right away. The article also demonstrates concern over volunteer firemen access and access by "others". One troubling remark in the story is how a one Andrew Mair, a single business administrator, seems poised to decide how the critical question of public access will be decided. Hm.

http://www.pressplus.com/atlantic/982243290.html

NATIONAL INDEX OF OPEN EXAMPLES LIVE

The National Index of Open Examples is live! I've begun the tedious task of importing the data from the previous HTML format. Mind you, the output from the database is not nearly as pleasant. It's actually pretty mechanical. However, with so many online examples of internet scanners, public safety cams, databases, etc., coming online every week, it's impossible to keep up with that manually. The database is much more efficient and to the point. The best part is that anyone can contribute through the online entry form. If you have an example you'd

like to include, feel free to stock it. It would be nice if some of you public safety folk would take the initiative in this regard.

I bought this thing and it is the biggest piece of crap!
To pick up a baby monitor, you have to be in the same room. The thing shuts off becaue of low battery after a few minutes.

It would be nice to be able to send the video to another tv, to save power. You can do this, but the R3 video stays on, so it saves no power.

The ac adapter is not strong enough to even run the video.

What the heck were they thinking?

No...he is a former reserve Petty officer in the U.S. Navy. He was discharged for false statements about his
medical and employment history last week.

Ka Ching!

Glenn-

I've offered to meet you in your hometown of Tacoma, so you could have
your chance to find out for yourself if I am a coward or not. But YOU
weren't available!!!!!!!!!! Instead, you made lies claiming that I cursed
on the radio (which the repeater owner/licensee says is incorrect) &
didn't make any noise until I was out of the area!!!!!!!!!!

No offer was made to me, you were stalking me in my home town Toilet-Boy.
Thanks for finally admitting to your stalking behavior.

> Instead, you made lies claiming that I cursed
> on the radio (which the repeater owner/licensee says is incorrect) &
> didn't make any noise until I was out of the area!!!!!!!!!!

A repeater owner is not required to know every operator that uses his
system. The 3 people that called me about your swearing fit on the 523
repeater did not call the repeater owner. He couldn't know about it. Those
three people did call me and I was teased by them for months over the
Stalker Toilet-Boy so mad he was cursing on the repeater about me. No one
called Marcinco so he wouldn't know. He isn't required to know Toilet-Boy.
Seems you are lacking in knowledge as to the requirements of a repeater
owner.

So snip, ignore, pretend and lie away Toilet-Boy. It the only thing you do
well other than your job as a mental health aide. What Vocational School did
you graduate from again?

Glenn

Has anyone ever had any luck receiving raw video signals from news helicopters? I understand they broadcast in the 2000 MHz range, so most receivers are not equiped for that frequency. What receivers, antenna's, ect. is needed to receive the news helicopters?

Thanks

Jim, scanning in Portland, Oregon and loving it.

3626. FS : Uniden BC 895 XLT base Trunk Tracker - $140.00

Why not just get a decent scanner instead.
I hear all this nonsense on how good this BC780xlt is supposed to be, I had one for just over a week, took it back to the shop, it was crap.
You can't beat a good Pro 2004,2005,2006 or similar

Wow Roger! It was made of crap?!?!?!?!?! Didn't you notice it was crap and not a radio when you opened the box? You actually touched it and tried to turn it on??!!??!! Why would you keep a radio that was made out of crap for a week. Didn't it smell up the house? What noise did that crap make to fool you into believing it was a scanner? Did you have a hard time returning a box of crap when they expected an electronics device in the box? Did you wit the week so it would quit smelling before you returned it. I've heard of fillings in teeth receiving radio but never crap. Wow Roger!

3634. Beware of Tom Sevart N2UHC

Newsgroup: rec.radio.scanner
Date: 2001-02-22 23:36:46 UTC
From: caddoo@earthlink.net
Message-ID: <3a99a2b6.40134085@news.earthlink.net>
Source record: 69733

To anyone who intends to deal with Tom Sevart, please read this message first!

I purchased a Icom R71A, which Tom advertised right here on RecRadioSwap. He advertised that it was in excellent condition and from a non-smoker.

I sent him the money he asked for, he would not ship COD, so he had my money first, which would be fine if he sent what he advertised.

But when the radio arrived, it did not work, all the screws were loose and odd colors. He obviously had been in the radio and there was an obvious problem with it working.

I called him, he told me, oh, I was afraid that might happen. So he knew it had a problem but NEVER disclosed it to me when I was inquiring about purchasing i t.

He told me he would send me back a check and then I would send him back the radio. Ten minutes later, he called and said his wife spent the money and has no money to send me and hung up the phone on me.

Therefore, I'm stuck with TOm's bomb. It cost me $400. and the bum won't fess up to his responsibility.

So, I am posting here a "BEWARE" and will give his info so NO ONE else will have to be ripped off like I was.

Thomas M. Sevart N2UHC
307 Granby
Frontenac, KS 66763-2440
(316) 231-0228

Do yourself a favor, and never deal with this character. He is a disgrace to the Ham radio hobby. His call is N2UHC and should be remembered as a crook.

I will, however, look into other avenues of getting my money back from this thief.

Here is a copy of his ad:

I have an R71A for sale in excellent condition. Coverage is 100 KHZ - 30
MHZ AM/FM/USB/LSB/CW/RTTY. 32 memory channels. Optional FM board installed
& remote control included. Owner is a non-smoker. I am asking $400 firm.

The receiver can be seen at http://photos.yahoo.com by clicking on "Radio
Pics." I want to sell this receiver so I can buy an R75. If interested,
contact me at n2uhc@yahoo.com.

The radio worked completely fine when I shipped it. I was using it on
my radio desk right up to the day I shipped it.

> I called him, he told me, oh, I was afraid that might happen. So he
> knew it had a problem but NEVER disclosed it to me when I was
> inquiring about purchasing i t.

The only problem with the radio is apparently the Voltage-Controlled
Oscillator (VCO) circuitry that needs to be tweaked slightly. The
receiver had this problem when I got it, I tweaked it, and it worked
fine for the two years or so that I owned it, right up to the point
when I switched it off and packed it in the box. I had no way of
knowing that the VCO would get out of tune again. I offered to tell
Mr. Schneider how to do this but he was extremely belligerant on the
phone.

> He told me he would send me back a check and then I would send him
> back the radio. Ten minutes later, he called and said his wife
spent
> the money and has no money to send me and hung up the phone on me.

I told you I do not have the money right now, but would send it when I
got it. After you took a threatening tone with me, I felt the
converation was going nowhere, so I terminated the call.

> Do yourself a favor, and never deal with this character. He is a
> disgrace to the Ham radio hobby. His call is N2UHC and should be
> remembered as a crook.

We had a deal, I shipped you a working radio. It was working when it
left my house. I'm not responsible for what effects a cross-country
trip will have on the radio.

> I will, however, look into other avenues of getting my money back
from
> this thief.

I offered to make good on the radio, but once you became extremely
belligerant and threatening toward me, the deal is final. I tried to

be more than fair with you, but you were being completely
unreasonable.

Consider the deal done.

To all:

Hi!! My name is Chris. I am the list owner and moderator of a brand new scanner mailing list!! It is called "CenCalScan" and is based at Yahoo. My list is for scanner enthusiasts that live in central California (Sacramento-Los Angeles).

Once you subscribe, you can post frequencies and any breaking events that you feel would interest us!!

If you do not live in central California, please spread the word that this list is available!! I would like to see my list be as successful as possible!!

There are two ways to subscribe:

[1] Send a blank email to:
CenCalScan-subscribe@yahoogroups.com

[2] Go to the list's homepage (the web address is in my signature line below) and fill out the box with your email address.

Thanks,

It's no so much the radios...it just not to practical. You need to be inline with the signal path to pick it off. most systems track via GPS from the recieve site...and since the airship is always moving...the path changes by the second. Very few choppers use omni antennas except the police. The police choppers use ch-9 in socal.

i notice you are in portland...is that near Beaverton?
I suggest you get in touch with John macky...he is the local expert on the Portland scanning scene. he frequent's this newgroup often as the local jester.

3646. 700 Mhz band

Newsgroup: rec.radio.scanner
Date: 2001-02-23 03:33:47 UTC
From: sjw <sjw3@stic.net>
Message-ID: <3A95DA1B.1EE26F6B@stic.net>
Source record: 69745

Washington, D.C. ☐ A Federal Communications Commission 700 MHz Guard Band auction (No.
38) ended on Wednesday, February 21, 2001, raising total net
revenue of $20,916,500.00.

The Guard Band Manager is a new class of commercial licensee engaged solely in the business of
leasing spectrum to third parties on a for-profit basis. The Guard Band Manager may subdivide its
spectrum in any manner it chooses and make it available to system operators, or directly to end
users for fixed or mobile (cellular system architecture is prohibited from operating in this band)
communications. The Guard Band Manager will be required to adhere to strict frequency
coordination and interference rules, and control use of the spectrum so as to facilitate protection for
the adjacent public safety bands.
This auction began on February 13, 2001, and ended after 38 rounds of bidding. Eight unsold
licenses from the first Guard Band auction, No. 33, were offered in eight Major Economic Areas
(MEAs). By Congressional direction in 1997, the Commission reallocated thirty-six megahertz of
spectrum for commercial use including fixed, mobile, and broadcasting services. Six of the thirty-six
megahertz have been identified as Guard Bands to provide protection to public safety users.

anyone else that MAY HAVE been banned were done so purely on
bad behavior on their part.

you deliberately tried to stalk Mr. Cheek. You pulled every dumb stunt in the
book
in order to call attention to yourself, and then when you were passed up for
moderator of the sacannradio forum (that job went to bill cheek), you lost it

completely.

Basically, you wrote your own epitaph on that one.

The only time the person you mention received any positive attention was
when he died.

The rest of the time the person you mention received very negative
attention by being kicked off of his ISP for abuse, being kicked
off of mailing lists for abuse, being jailed & pursued for criminal
charges, etc.

Wrong again, Eric. You better go search the archives to see about the
Hugh Duff (VA3TO) situation.

> you deliberately tried to stalk Mr. Cheek. You pulled every dumb stunt in
the

I have never stalked the person you mention & have never pulled a dumb
stunt.

> and then when you were passed up for
> moderator of the sacannradio forum (that job went to bill cheek), you lost
it

WRONG!! The person you mention above (now deceased) was the moderator
of the Scanradio echo on Fidonet, & upon his leaving the moderator position
he
ran an election. I was nominated for the moderatorship & he refused to
accept
the nomination or any votes for me. Then another individual became the
moderator.
I was NEVER in competition with the person you mention for the
moderatorship,
rather he acted to hinder the democratic will of the users of the echo who
did
want me for the moderator as he was leaving the position to comply with the
request that he vacate Fidonet.

Why is it that SO MANY PEOPLE HATE YOU, ERIC OYEN (AKA PROUDHAWK)

I don't think anybody hates eric....not like they hate John Macky.
Kinda like this John/Rick...

Eric kinda contributes every so often to the actual scanning discussion...He offers some usefule stuff now and then.
I even think I bagged some real funny sound files from him years ago that I still use to this day to torment hams on the socal repeaters.

If Eric was anywhere near as stupid as you are....He would get the same dolt treatment that you get. But sorry dude...the blindfuck in Az just kinda walk's all over your sorry ass John Macky.

Like the soundfile says...

And publishing 3 books...
And making a pretty cool scanning interface...
An generally kicking your pathetic little ass around fido and usenet for 8 years or more.

And Bill Cheek was never convicted of a crime...nor was he ever kicked out of the Navy Reserves after 16 weeks like you were John.

I hope you have some kids someday John...so my kids can kick them around too.

The digital run off the same frequencies as the analog?
You can't eavesdrop on the digital phones with a normal scanner can you?
I just want to make sure that if I get a scanner with cellular permanently blocked that someday the cell freqs won't become something else that would be legal to listen to, since I wouldn't be able to tune in.

Dont worry about it.
What are they goung to do to a kid for listening to a scanner?
The people might be upset but they have no real legal recourse.
If it was you that did the listning and repeating of information then it
would be different.

I use an old cigar tube, or 35mm film canister, or a rubber band.

Tom, you are a total and complete LIAR!!! I never threatened you and that's always a good excuse to use when you're a crook!

Furthermore, your ad states you were selling this excellent radio to purchase another rig. Your excuse to me was that your WIFE spent the money.

Get your stories straight!

Forget the nonsense, WHEN WILL YOU HAVE THE MONEY TO RETURN TO ME?

I'll hold the radio until your money order arrives.

It's very easy when you have my money and I have a broken radio, for you to hang up the phone and call it a DONE DEAL!

It's not done by no means!

So when can you send the money? The radio is in the box waiting to be returned to you when I receive my $400.

Waiting to hear from you.....Rich

No I wrote " Everyone gets to update their kill filters, you changed your screen name again. Why is that Toilet-Boy??"

Nice to see when I say Toilet-Boy you know your name and answer like a good Toilet-Boy and then snip away as usual when you can justify your actions!!

> With as many people as you anger, Glenn Hansen, I am sure you are in
> many people's kill filter. Follow this link below for a typical example!
>
http://groups.google.com/groups?q=glenn+hansen&start=30&hl=en&lr=&safe=off&r
> num=33&seld=984173724&ic=1

I don't care. I am not on this group telling ANYONE that I am popular or not in kill filters as you are Toilet-Boy. I don't have to give links from a year ago to show people hate you Toilet-Boy. All you have to do is scan the messages in this group EVERY DAY!!!! So again Toilet-Boy, why do you constantly change your screen name? Tell us all another lie.

> > A repeater owner is not required to know every operator that uses his
> > system. The 3 people that
> lies & sniveling from Glenn snipped

No lies and certainly not sniveling. What did Toilet-Boy snip out? He snipped:

"The 3 people that called me about your swearing fit on the 523 repeater did not call the repeater owner. He couldn't know about it. Those three people did call me and I was teased by them for months over the Stalker Toilet-Boy so mad he was cursing on the repeater about me. No one called Marcinco so he wouldn't know. He isn't required to know Toilet-Boy. Seems you are lacking in knowledge as to the requirements of a repeater owner."

No lies or sniveling just you a running when I call Toilet-Boy and you snipping the truth when yoiu can't justify your actions! Try again Toliet-Boy.

> So what is your point??

Reading comprehension seems to be a challenge for Toilet-Boy doesn't it?

> Are you trying to say that you know what happens
> on the repeater better than the repeater owner/licensee???

Yes in the case of you threatening me on the repeater and screaming profanities. It has been verified on this NG by the witnesses a number of times. If the operator wasn't listening and he wasn't, and the rest of the people involved took you for what you are, an asshole, then why would we bother the repeater operator with it. I haven't heard the repeater operator more than 3 times in 5 years on that system. He has many more and CAN'T hear everything. Lie on Toilet-Boy, its the only thing you do well. You will never convince anyone of you lie. Your actions on the repeater mimic your action here on the NG. The only person you can fool is yourself Toilet-Boy.

Glenn

BTW: One other tidbit you dodged Toilet-Boy. I said "So snip, ignore, pretend and lie away Toilet-Boy. It the only thing you do well other than your job as a mental health aide. What Vocational School did you graduate from again?"

Well you snipped, ignored and pretended as I predicted. You did fail to answer what Vocational School did you graduated from before embarking on your mental health aide career. Why do you always avoid answering questions concerning your education Toilet-Boy? Embarrassed? Why did you take a job you are ashamed to tell people about? Why do you hide your employment Toilet-Boy?

3688. Re: 780xlt software

Newsgroup: rec.radio.scanner
Date: 2001-02-23 15:44:55 UTC
From: Scott <ssybert@_NOSPAM_airvananet.com>
Message-ID: <Xzvl6.3817$oX3.309215@newsread1.prod.itd.earthlink.net>
Source record: 69687

I refuse to spend the money on it. I spend $370 on the scanner and got a free piece of garbage software and a 1-900 number to program it!! Scanmaster sucks. The whole company is a scam. As a matter of fact, so is uniden. Uniden's scanners suck. They've always sucked. It should not have taken until 2001 for someone to come out with a scanner like this. The only reason I bought one was because Uniden was the only company who had such a device available. I spent way to much money on it but being I wanted the features and Uniden being the only company to produce a product with those features, I had no choice. Scanner companies are like CB companies. They all suck. There's a demand for a good product but nobody to produce one. Living in a capitalistic country, I find that strange. You know, I've never seen a CB radio that was worth the scrap metal it was made of. Most of them are all transistor through-hole circutry that fails a few years after mobile instalation. The components are not stable nor are they suitable for the aplications they are being used in. Compared to some of the other technological advances, there is really to excuse for lousy, over priced scanners and CB radio's. Now I'm not some buck tooth idiot who lives on his CB. I'm an amateur who lives on his "rig". And that's one place I can give major credit to. Ham radio. Ham radio equipment is state of the art. It always has been and there's allways been someone to buy the latest and greatest equipment. I just don't understand why others can't follow. Well, I digress, back to the WinScan software... I will NOT purchase tha software. Uniden should have produced a similar product and included it in with their extreemly over priced scanner. But instead they give Some 2-bit company a pre-release of their product to write some lousy program for so they can share the profits off of the additional $75.00 softwrae purchases. Look who's laughing now. They ranted and raved about how great this scanner was. It's not. It's a scanner with 25K of memory. Big deal. And it can follow EDACS too. So can a million other 2-way radio's. Not much of an advancement guys. $75.00 is outragous. that will bring my total scanner costs up to $445.00. For a Uinden. I'll wait until the software starts showing up on the newsgroups. Uniden and Pozilla are trying to f**k us. Not this time. You produce a REAL product, something that can handle the APCO-25 digital encoding that's been around for years and maybe I'll consider paying for software to program it. Oh wait, they're working on that too arn't they... Bet that will be another couple of hundered dollars. For what? A 50cent chip and some software in it? I think $370 is more than enough for an ANALOG scanner. I'm not spending anymore. I'll get my full copy elsewhere.

If you would like to reply to me, take out the _NOSPAM_ in my email.

Can you say DUH? Of course he had been inside the radio, what do you think? Optional boards magically appear inside? And what's to say you feel that the radio is not worth $400 and are trying to get your money back? Could it be that you are saying this crap about Tom simply so he'll send you the money so you can turn around and not send him back the radio? Personally, based upon the tone, grammer, and urgency expressed in your post, I'd say your the theif. And, BTW, I don't even know Tom, so don't think I'm defending him simply because he's a "friend". He's not.

Source record: 69693

I have an older model (bought around 95-96) Uniden SC-150y that fell off a shelf a year ago and hasn't worked well since. The only problem with it is that the audio level is VERY low. I can turn the volume knob up all the way and still can't hear it. The unit works fine otherwise. Does anyone know what could cause this and if there is any way to fix it? What should I look for inside the case to see if any traces been damaged or anything of the sort? If I can't fix it, what is a good place that I can send it to (besides uniden) that might be able to fix it? Thanks!!

3696. Re: bc 780 purchase in Detroit

Well I went to Abels and the price on the unit was $400 non-negotiable.
That is a little bit of a premium that I was willing to pay to frequent
a local establishment. However, I asked him a couple of questions on the
unit and he couldn't answer them. I feel that if I'm going to spend the
extra money for a local guy he should be able to walk me thru the
operation of the unit.

Thanks for the info
Norm

If you saw the scanner right now what I descibed was accurate. First owner didn't power the unit,second owner verified it worked . The fucker is new. I decided to pull the ad because I felt I didn't describe it ad well as I should have. It does have 15 minutes on it only as I have been assured of that. Let me put this on caps. I HAVE SOLD MAYBE HUNDRED SCANNERS ON HERE,STRONGSIGNALS AND EBAY AND NEVER HAD ONE SINGLE COMPLAINT. PERIOD. Everyone knows the 2006 for $700 was bogus and was a joke.
You want referances I can come up with alot. Here is the deal nimrods: I can hold the scanner for awhile and get more on Ebay then I can on here. Everyone knows Ebay buyers pay a little more and in some cases alot. Why should I take less? I have Pro 2042,2035,895xlt,9000xlt,Aor 8000,Icoms among plenty others and another 2006 all new in the box and wanted to ad to my collection. Hoever I just wanted to keep one 2006 I already have and sell this one as a profit. It is a shame we got such shifter brains on these newsgroups who think they need an explanation for everything. Mind your own business and if you don't want to buy it don't buy it.

"Toilet-Boy John-Mackey <NOjmackeySPAM@parg.org> answered to his name
Toilet-Boy and came running ...
>
> Glenn <glenn.hansen@usa.net> wrote
> > cowardly antics show you up again and again and again.
>
> EXACTLY what have I done that is cowardly? I use my real ID here,
> & have always met with anyone when asked! YOU are the coward
> who runs & hides until people are away, then cry foul stating you
> were afraid of hearing a swear word!!!!!!!!

First you snipped what I actually wrote Cowardly Toilet-Boy. That alone
shows what a COWARD you are. I wrote:

"No I wrote " Everyone gets to update their kill filters, you changed your
screen name again. Why is that Toilet-Boy??"
Nice to see when I say Toilet-Boy you know your name and answer like a good
Toilet-Boy and then snip away as usual when you can justify your actions!!"

No answer COWARD?

Then I wrote and you snipped like the Coward Toilet-Boy is:

"I don't care. I am not on this group telling ANYONE that I am popular or
not
in kill filters as you are Toilet-Boy. I don't have to give links from a
year ago to show people hate you Toilet-Boy. All you have to do is scan the
messages in this group EVERY DAY!!!! So again Toilet-Boy, why do you
constantly change your screen name? Tell us all another lie."

Those are the actions of a Coward Toilet-Boy. What part confuses you?

> > "The 3 people that called me about your swearing fit on the 523
>
> Those 3 people mean nothing since they have never stepped forward
> & the repeater owner denies knowing anything of the situation & knowing
> anything of who YOU are!!

That isn't what I said COWARDLY Toilet-Boy. I said and it blows away your
little strawman defense:

""The 3 people that called me about your swearing fit on the 523
repeater did not call the repeater owner. He couldn't know about it. Those
three people did call me and I was teased by them for months over the
Stalker Toilet-Boy so mad he was cursing on the repeater about me. No one
called Marcinco so he wouldn't know. He isn't required to know Toilet-Boy.
Seems you are lacking in knowledge as to the requirements of a repeater

owner."

No lies or sniveling just you a running when I call Toilet-Boy and you snipping the truth when yoiu can't justify your actions! Try again Toliet-Boy.""

Why did you dodge that COWARDLY Toilet-Boy. Because it proves you for the fraud and COWARD that you are,

(BTW, Marcinco) has given a friend and I use of his closed 440 repeater. We have it all to ourselves. How did he do that and not know me COWARDLY Toilet-Boy??)

> > > Are you trying to say that you know what happens
> > > on the repeater better than the repeater owner/licensee???
> >
> > Yes in the case of
>
> According to the LAW, you are wrong!

Please state the law that says a repeater owner must know every conversation that takes place on his system COWARDLY Toilet-Boy. You lose again.

> > profanities. It has been verified on this NG by the witnesses a number of
>
> No witness has ever stepped forward on this NG to say anything as such.

N7ZXL, N0NZT and AB7DM verified COWARDLY Toilet-Boy. Tow of them have posted over the years of your denial.

> Once again you are proven a LIAR, Glenn Hansen KB7PKC!

You only wish you could COWARDLY Toilet-Boy. Hey you forgot these questions again.

One other tidbit you dodged COWARDLY Toilet-Boy. I said "So snip, ignore, pretend and lie away Toilet-Boy. It the only thing you do well other than your job as a mental health aide. What Vocational School did you graduate from again?"

Well you snipped, ignored and pretended as I predicted. You did fail to answer what Vocational School did you graduated from before embarking on your mental health aide career. Why do you always avoid answering questions concerning your education COWARDLY Toilet-Boy? Embarrassed? Why did you take a job
you are ashamed to tell people about? Why do you hide your employment COWARDLY Toilet-Boy?

3714. Re: My Kid was Screwing with My Scanner! Help! Legal

Newsgroup: rec.radio.scanner

Source record: 69613

The parents will (probably) feel really upset about this, and depending on how they feel about it might sue you. You didn't actually do anything illegal, but the kid is 12 years old, so you are responsible for him. I am not a lawyer, so I'm not sure if they could charge you with violating scanning laws or not, but either way, they could say that you weren't being responsible for him. Some point to take into consideration are that you can't get in trouble for having that range programmed since they are also used for things other than cordless phones, like utility companys. Also, did he do something incredibly stupid like go around and tell the whole school? That would make the parents really feel like sueing you. If they knew that it was an accident, and he just told the girl, they will likely just be really annoyed. Did you let him use the scanner, or specifically told him not to? Also, what do you mean by "Parents seem to understand!"? The parents understand that it was an accident, or they understand how he found out?

Since you specifically asked what could happen, if you got in trouble for it: Your scanner could be confiscated, or more rather you would just have to pay a fine. You might have to pay for damages. Stuff like that. The above ***could*** happen, not likely to happen, as I said before, unless he told everyone, they will probably just be pissed off.

To all:

I have some questions about setting up a web site in which people can
listen to live scanner broadcasts.

[1] How do you set up such a site?
[2] What type of software is required?
[3] How much does this software cost?

The reason that I am asking is that I would like to use my scanner to
broadcast Fresno PD over the Net.

I would prefer that all replies to this be emailed to me.

Thanks,

Hi Chris,

You should check out the following site:

http://nihac.info.nih.gov/listener/listener.html

It has a very good description of how to setup a Web control scanner
that you can actually tune. This particular site controls an ICOM
R7000 in the Washington DC / Bethesda MD area.

You should also check out the Live365.com site.

http://www.live365.com/plr/index.html

I would check the speaker and if it has a external speaker jack
check that, a cold solder connection is a culprit for problems.

Had I known this radio has a problem, I certainly would NOT have purchased it. I was looking for an "excellent" radio. Since that was the way it was described, I don't feel that I'm being unreasonable at all for wanting what was described as "excellent".

Tom tends to tell lies because even his advertisement states that he was selling this radio to purchase an Icom R75 and his excuse to me for not refunding my money is that his wife SPENT it. That story came 10 minutes after he had agreed to refund my money.

Well, Tom, you knew there was a problem with this radio as my original post stated the facts.

You were not threatened. How can I possibly send such a threat when I am in NJ and you are in KS. Just how effective would a threat actually be over the phone?

So stop the nonsense and using "threats" as an excuse and tell me when you plan to have the $400. to return to me.

The radio is packed and ready to be shipped back to you when I receive my money.

Let me know publicly, because I'm sure that everyone out here would like to see you prove me wrong and that you are not a thief. So Tom, make me eat my words by sending me back my money.

The ball is in your court and it's up to you to let me know just when the money order will be in the mail.

Thanks for your time......Rich

On the bottom of my cordless phone, a message is engraved in the case as follows: "PRIVACY OF COMMUNICATION MAY NOT BE ENSURED WHEN USING THIS PHONE." I am sure that a similar message appears in the user's manual for the phone. Who's fault is it, really, that the conversation was overheard? It could be argued that the manufacturers need to make the message clearer to the average uninformed consumer, but the information IS there, after all.

Does the Electronics Communications Privacy Act also make listening to 46 MHz and 900 MHz cordless phones a federal crime? I don't think so, or the scanner manufacturers would block those frequencies, too. Disclosure of intercepted cordless calls, however, may be protected by federal law, so you technically might have a problem there as the responsible adult. I think a sincere apology in this case accompanied by a brief informative discussion of cordless phone privacy issues could go a long way in patching things up, and would teach an important lesson to both victim and perpetrator.

Is there a recommended way for entering frequencies in a TrunkTracker (BC780XLT)? Should they be entered in sequence. (lowest to the highest or the reverse)? Or, makes no difference how they are entered.

Your reasoning sounds logical, but your conclusion is factually incorrect.
It is indeed a federal crime to monitor cordless phones, and it has been
since 1994.

As you say, disclosure (the statutory term is "divulgence") is also a
violation of the law.

Listening to cordless is a violation of federal law. The cellular block is due to a Congressional directive to the FCC. The cordless frequencies are not subject to a similar block since they are shared with other, monitorable, users.

The following is a dissertation on the various laws and their effect.

The laws of the United States, passed by Congress, are codified as the United States Code (USC). It is divided into titles covering various subjects. Title 18 includes the criminal laws and penalties; Title 47 covers telecommunications. A law can be refered to by its original name (i.e. "The Communication Act of 1934") or its entry in the USC. A specific section would be refered to by title/USC/part/section, i.e. 47 USC 605. To carry out the law, government agencies create regulations, which are codified as the Code of Federal Regulations (CFR). It is likewise divided into titles, with the FCC's rules in 47 CFR.

18 USC 119 bars the disclosure of any electronic communications to which you are not a party (with certain legal exceptions), and sets the penalties. 47 USC 605 (the Communications Act of 1934) also bans the disclosure or use of third-party communications. With minor changes, this has been the law for 65 years.

In 1986 Congress passed the Electronic Communications Privacy Act (the ECPA), which added definitions to the law that banned listening to cellular telephones. It also banned the monitoring of broadcast auxiliary, SCA and scrambled signals.

In 1992 Congress passed the Telephone Disclosure and Dispute Resolution Act (TDDRA), which instructed the FCC to ban the manufacture or import of scanners capable of receiving cellular. In accordance with this law, the FCC modified 47 CFR Parts 2 & 15, effective 26 April 1993. Note that this does not affect the sale of such scanners, so long as they were made or imported before the cutoff date.

On 25 Oct 94, the Digital Telephony act was signed. Buried in one of the additional sections was a change to 18 USC 2510 & 2511 that added cordless phones to the original ECPA ban on receiving cellular.

In April 99 the FCC revised 47 CFR 15.121 so that any cellular mod, even to one's own or a pre-ban scanner, constitutes manufacture. They also required manufacturers to make the tuning and control components

inaccessible, and limited the reception of cellular images.

In short, it is illegal to:
Manufacture or import cellular-capable scanners;
Modify a scanner for cellular reception;
Listen to cellular (and cordless) transmissions;
Divulge any communication to which you are not a party.

Good Point Rob.....

He just asked her if it was true not disclosing how he heard about the information. No one eles.

I told the parents that he was screwing with my radio equipment (Scanner) and hit the search band for 30 to 50 mhz/ Explaining shortly how a scanner works.

So far up to now I have not heard anything eles about it. The Husband seemed to under stand by saying kids will be kids...
The Mother?

I am just keeping my fingers crossed and see what happens I cannot clean myself up by getting rid of everthing. I have been into scanning since I can remeber.

They said what he heard a bit last night. as I had not been priviy to the transmission. Must have been under a min for him to just listen to what he did.

From what I understand its a break up one to one coast the other stays. I would asume they have no time to draw a long trial.

As far as them being pissed I could care less they are not the best of upstanding citizens.

Unfortunately not every application allows for the installation of an outside antenna. Late at night during last year's Field Day, we took out my 895, and played around with various antennas hooked to a right angle adapter. The RS extendable whip and Austin Condor both did a rather good job back there. (I think there is a model of the Condor with a built in right angle, but I could be wrong).

I will go on record stating that I still prefer my discone :-)

<977bg2$p26$1@sshuraaa-i-1.production.compuserve.com> wrote:

> Divulge any communication to which you are not a party.

The exception is Governemnet communications:

US Vs Gass No. 95-CR-55-C
Hence, given that this Court has determined that Chapter 119 qualifies the
second sentence of 605(a), the issue at trial should have been directed to the
exception contained in 18 U.S.C. 2511(2)(g). That is, under that section, the
activities charged in the indictment against Gass cannot be criminal unless the
government proves that the radio communications which Gass sought to intercept
were not readily accessible to the general public.
http://www.afn.org/~jlr/gass1.txt

If a governmental radio communication is "readily accessible" to the general
public," then where is the harm in intercepting it and divulging the contents
of the communication? Chapter 119 recognizes this by not prohibiting the
interception and divulgence of such "readily accessible" governmental "radio
communications." Furthermore, whenever a "readily accessible" message is sent
out over the airways, it is essentially "divulged" to the public. Presumably,
anyone using a lawful device, in a lawful manner, can receive "readily
accessible" radio communications. Section 2511(1)(e) is also noteworthy in that
it prohibits the disclosure of certain communications which are otherwise
legally intercepted. Significantly, 2511(1)(e) does not prohibit the disclosure
of communications legally intercepted under the exceptions contained in
2511(2)(g). If Congress desired to prohibit the divulgence of radio
communications legally intercepted pursuant to 2511(2)(g), it could have easily
done so in 2511(1)(e).

Whether you think so or not, it does. Amended to include cordless phones as
something you're prohibited from monitoring. They just didn't include them
in the seperate rules about receiver type acceptance not being possible for
things that can hear cellular.

3753. How to set upper and lower frequencies?

The conference and news cast replays and reports I heard, they stated it is "possible" the EMS crew cut the strap to remove him. People die in car crashes every day of the year. Driving a racing car only stands to increase the chances dramatically. He died doing what he wanted to do. He knew the risks. "IF" they find anything to hint to murder, I'm sure they will investigate it. "IF" the belt DID break, a flawed material may have been the cause. THAT is NOT unheard of. Wouldn't be much different than the people all killed by the tires that were "defective" . Most of them I'm sure were driving 100 miles per hour or more slower. If that was murder, then maybe it was murder by "defect". Just a different mechanism of defect. I'm not trying to make it sound as though it doesn't matter. It does, but it is a sad fact of life. One I'm sure we all wish didn't have to be.

Being a Firefighter/Medic, I know for a fact, you cut straps to remove a patient at times. You don't have time to screw with the buckles. When seconds may count, you can't be fumbling with them. Not even one or two, let alone the five reportedly used in that harness.
It isn't inconceivable to have one get cut. Truthfully, since they said it was "possible" the EMS crew cut the belt, they may have made that report in haste. Right now, all of it is pure speculation, nothing more. If they have any reason to think the EMS crew may have cut the belt, it would have been better to have not reported a "belt" problem at all. We all know, that reports have been made in haste to get information to the public hungry for news, of such important events. Wouldn't it be better to report more substantial information than that based on guesses?

I don't want to see anyone killed. None of us do (or shouldn't). I've seen my share, even of innocent children a year or so old, killed by DUIs and so on. But I will offer my opinion for what it is worth. To start this line of rumors and such, is only going to weigh on the family. They don't need this. If you are a true fan (of Dale), or of racing itself, have compassion for his family. Let him rest in peace and allow them to grieve without the hype. I'm sure they would appreciate it very much.

If anything, pray for his family, that they can find comfort, and that this tragedy be used to find an answer to keep the rest of those who choose this sport to be safe due to new or improved methods to prevent such a reoccurrence. "IF" it was murder, then maybe pray too that it is brought to light, and the culprit(s) punished. I'm sure the almighty will do so in his own way anyway.

I didn't know Dale, wasn't even a "racing" fan. But the moment I heard he died and seen the shot of him hugging his son and wife and kissing her for what may have been the last time prior to getting in the car, and all the replays of his interviews, I felt as though I knew him all my life. My heart

went out to his family. It is sad for him to die at his still young age, but we humans do not control the clock of life. May his family be allowed to find comfort in your "support" - not more grief in reports of rumors and threats. None of which will bring him back, and will serve to do nothing more than to bring even more grief to the family to hear of his "fans" acting in such a manner. Don't let a madness hurt them anymore than they already have been. If you are/were a "fan" of Dale, allow yourself to grieve. Not in anger but in the fact you were able to be his fan for the time allowed. Appreciate his memory, don't destroy it. May God Bless and comfort the Family and friends of Dale Earnhardt and.....

May DALE EARNHARDT Rest In Peace.

Wrong.
:
: The rest of the time the person you mention received very negative
: attention by being kicked off of his ISP for abuse, being kicked
: off of mailing lists for abuse, being jailed & pursued for criminal
: charges, etc.

Cheek was somewhat abusive in his posts. But I never knew him to have the mania about anyone that you seem to have about him, even after his death.

Why don't you just go away, Mackey? You weren't appreciated when you were baiting Cheek years ago, and you are not appreciated by most of us now.

By the way - Cheek was never jailed. There were some sort of federal charges in process - having to do with modifying scanners, if I recall correctly. Of course, those are now moot.

I did not think much of Cheek, as a person. He had too short a temper. On the other hand, if he was treated with courtesy, he responded in a courteous manner.

I respected him as a technician. His knowledge of scanners was probably greater than most other people still living.

I really don't want to screw around with an antenna that would require running cable through my new home. I have always used the original antenna with a scanner. Question is there a better alternative such as this?http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F001%5F002%5F007%5F000&product%5Fid=20%2D032 . I realize it is a mobile antenna but if I used it on a magnetic surface at home do you think it would make any improvement?

Would you like to see some posts that provide examples
of his mania about others?

> By the way - Cheek was never jailed. There were some sort of federal

According to writing by the person you mention, he was taken
to a law enforcement center, detained for several hours, & questioned.
Being jailed is detention, detention is basically jailing. 'Nuff said on
that!

> I did not think much of Cheek, as a person. He had too short a temper.

Your assessment is shared by others.

> On the other hand, if he was treated with courtesy, he responded in a
> courteous manner.

Perhaps sometimes, but not always true.

3773. Re: Is there a good non discone antenna?

Well are you referring to a base scanner or a handheld ?
A handheld would be overloaded anyways by a discone and a long run of cable.
There might be a slight improvement using that antenna on that link vs. the stock one,but most likely not very perceptable,if at all.

Only thing I could say is RS is good with its return policy,so it wouldn't hurt to try.
In reception the is no substitute for height.
If you dont consider mounting an antenna on the roof/attic/upper level of home an option then there really isnt much that can be done
to improve your reception over the stock antenna.

Exactly how they say to do it at the RS site, one good thing you can say about RS on their scanners, once you know how to use one of them, you pretty well know the basics for them all.

Len, if you need more info, RS has some text docs you can download here:

http://www.radioshack.com/ProdSupport/DocumentDetail/DocumentDetailIndex.asp?P=support_electronics&D=2849&T=htm

There are two versions listed, a look the panel on the back of your scanner will tell you which you have.

Last chance before I Ebay it..This 2006 is in excellent shape, very low mileage. I misplaced the telescoping antenna as I only used it with a rooftop version. I will take $200, I pay shipping, you order the telescoping antenna R/S#10538270..If you are interested, email me and I will send you a pic of the unit in operation...Strong backlit display, unit has mods already done..

Clinton. Hell no. Boy-this is getting stupid.I don't get suckered. If
the 10 year old car had 100 miles I wouldn't hesitate. Especially if I
could find a Lincoln Mark 7 like in my garage right now that has 140k
miles on it. I won't advertise the scanner as new next time like I said.
Even though I perceive it as new. If I describe it right I will still
probably get what I want. How about we just agree to disagree? Just move
on.

Thanks, D Stark and Skip, for clearing up my confusion.

What I view as the larger issue is that most people don't realize how easy it is to overhear their cordless phone conversations. I've heard stories of overhearing drug deals, etc., which of course raises new questions about the legality of divulgence, but I'm not prepared for that debate.

The way I look at it, if you don't tell anyone you've been listening, there's no way they'll ever know and, therefore, can't feel violated. I believe that the violation only occurs when a _third_ person learns something, because it's only then that the first person can even begin to know that the interception occurred. In other words, the feds can't bust someone for monitoring phones unless they have evidence of some sort...this would have to be either (1) knowledge through divulgence or (2) evidence of the scanner being tuned to those frequencies AND someone listening to the demodulated signal.

On the other hand, it's still illegal even if you don't get caught. Fortunately, cordless/cellular listening is boring enough to discourage frequent listening.

The slowest CW That I have ever copied but is was fun to listen to the mysterious signals on 136.
Rik

LF-TO-LF TRANSATLANTIC AMATEUR CONTACT IS HISTORY

Amateur Radio history was made this month when amateurs in Canada and the UK completed what appears to be the first two-way transatlantic Amateur Radio exchange on 136 kHz. Larry Kayser, VA3LK, and Lawrence "Laurie" Mayhead, G3AQC, managed the LF feat using extremely slow CW that featured 90-second-long dits and 180-second-long dahs. The two-way contact took two weeks to complete.

"We are the first to do a two-way QSO on LF across the North Atlantic as far as I am concerned," Kayser said. "We are the ones who put the stakes in the ground; others will build on what we have done."

> magazine and the ADMS-3 software in Feb 2001 MT.
>
> ADMS-3 does most of what it's supposed
> to do, though it's not elegant.

Bob, I just reviewed the VR-500 from a MW and SW perspective for Radio Netherlands. The ADMS-3 v2.01 software purchased in January 2001 from Yaesu directly was up to v2.04 in February (Rod Thompson updated it when I called with a question), but I didn't check the user format print business you refer to. Maybe the new version fixes the problem.

I had an issue with the 8VDC requirement of the ADMS circuit board. My USB-to-COMport adaptor wouldn't work; I wound up using COM1.

"Jailed" would imply that they put him into a cell. Detaining
the "suspect" against his will, or not giving the "suspect" the
option, would be considered an "arrest". In any case, the
crucial question would be whether he was "convicted".

Is this the same radio you replaced the S-Meter light with a RS 12 volt and a resistor? You talked about it in rec.radio.shortwave. Is that the one Tom? You say you were prepared to refund the money until. So you Sold a radio as being in excellent condition that actually had the VCO tweaked and the dial light replaced with your own bulb rather than a Icom replacement. Dude gets it and you say you were prepared to refund the money but you never said it. You also had lied at least twice about the condition of the radio yet Dude should be calm and listen to bullsh*t from you when all you should have said to him was "I'll send you a cashiers check today. I am sorry".

Bad bad bad. No excuse Tom. If the threat was real you call the police. If the threat is because you got caught telling lie after lie you be a man and refund the money. WOW! You are rotten to the core.

He died before he could be convicted.

You, Michael Moore, are either a LIAR, FOOL, or
have NO KNOWLEDGE OF PUBLIC FACTS!!!!

It is CLEARLY said "the Cheeks were whisked downtown, strip-searched, locked
up in the
Metropolitan Correctional Center". The person you mention also said "I
still have a sore on
my foot I got from the sandals they made me wear in jail"!!!!!!!!

So do you continue to want to argue the difference betweek "Jailed" &
"locked up"???????????? Doesn't make any difference anyway since the person
you mention HIMSELF said he was in "jail"!!!!

Read either of the following:

By James B. Kelleher

Bill and Cindy Cheek thought they'd hit bottom earlier this year, after they
were targeted in a sting operation by New York City cops who didn't like the
fact that the local couple was equipping Big Apple residents to eavesdrop on
police communications.

Arrested in late March in an early-morning raid on their Mira Mesa home by
more than a dozen armed

federal agents, the Cheeks were whisked downtown, strip-searched, locked up in the Metropolitan Correctional Center, hauled before a judge, and charged with conspiring to use interstate commerce "to distribute prohibited electronic communication intercepting devices."

"I still have a sore on my foot I got from the sandals they made me wear in jail," says Bill.

Later, they were pressured to fly to New York -- a $1500 trip they paid for themselves -- in order to be interrogated by investigators who, Bill says, "called us every name in the book...including 'criminals' and 'liars.' "

At the time, it was about the most frightening and disorienting turn of events the couple had ever known. Today, the Cheeks understand that was the fun part.

Their tuition in the lesson that No Matter How Bad Things Get, They Can Always Get Worse was administered this fall by doctors at Sharp Rees-Steely and the U.S. Attorneys Office in New York.

In late September, the doctors at Rees-Steely diagnosed Bill with lung cancer. They told the 53-year-old, who has no health insurance, that he had just three months to live -- maybe six if he underwent chemotherapy.

A week later, U.S. Attorney John L. Smith convinced a federal grand jury in New York to indict Bill on one count of violating Title 18, United States Code, Section 2512 (1) (a), a felony. "BILL CHEEK," the indictment read, "did knowingly and intentionally send through the mail and send in interstate
commerce electronic, mechanical and other devices, knowing and having reason to know that the design of such devices rendered them primarily useful for the purpose of surreptitious interception of wire and
electronic communications...."

The good news? The charges against Cindy have been dropped. The bad news? Bill appeared to have a big decision to make.

Because of a darkly ironic scheduling conflict, the dying man had not one but two appointments to keep last Tuesday. The first was here in San Diego, where Bill was scheduled to undergo his first bout of chemotherapy at Sharp Rees-Steely in Linda Vista at 8:00 a.m.

The second was in Brooklyn, where at 6:30 a.m. San Diego time Bill was expected to enter his plea in The United States of America vs. Bill Cheek (CR-99-0914). The U.S. Attorney's office, which was informed of Bill's diagnosis and prognosis several days before the Grand Jury indicted him, sent the San Diego man a get-well-soon card of sorts. In an October 4 letter, the U.S. Attorney's office informed
Bill that if he failed to appear in the Brooklyn court at the appointed hour, "a warrant would be sought for your arrest."

Bill's reaction? "Now," he says, "I'm pissed."

Anyone familiar with the recent record of the New York City Police Department can perhaps understand why the cops there would be sensitive about having their two-way communications intercepted by civilians or anybody else. Critics of Mayor Rudy Giuliani, including the Reverend Al Sharpton and others, say Giuliani's campaign to clean up the city has involved more than a little bad behavior on the part of the cops, particularly toward blacks and Hispanics.

The killing earlier this year of Amadou Diallo, the Guinean immigrant shot 41 times by four cops in the Bronx who mistook him for a rape suspect, as well as the torture of Abner Louima, the Haitian immigrant raped with a plunger by a cop in Brooklyn, are just the most publicized examples of a trend, critics say, of growing police brutality in Fun City. Just this summer, a federal probe of the New York City Police Department led to calls for an outside watchdog to oversee its 39,000-officer police department. Naturally, the cops were against the idea. They don't want anybody monitoring their activities -- or their communications.

Still, Bill and Cindy say they don't know why the authorities singled them out. The Cheeks' home-based business, COMMtronics Engineering, was not the only company in America selling devices that would decode the latest generation of police communications. At least two other outfits -- MFJ Enterprises and Optoelectronics -- were offering similar units over the Internet when the cops took the Cheeks down.

But as the editor and publisher of World Scanner Report, and an outspoken critic of Federal Communications Commission regulations, Bill may have invited the feds to draw a bead on him. He was certainly no stranger to government-communications regulators. Twice in the 1980s, when he was editor of the 11 Meter Times and Journal, a publication for citizens band (CB) radio buffs that he published from home, Bill had run-ins with the FCC, which accused him of using his columns to encourage others to break the law.

In 1988, Bill shut down the 11 Meter Times and Journal in what he says today was an unofficial deal with the feds, who told him they'd stop their investigation if he stopped publishing. Bill played ball, and the FCC kept its word. He and Cindy then concentrated on building up COMMtronics, which sold a variety of items of interest to scanner buffs and offered computer-consulting services.

The Cheeks' arrest this spring came after undercover New York cops contacted the couple in late 1998 and early 1999 and bought five do-it-yourself kits over the Internet. Once assembled, the units allowed users to unscramble the encoded messages that pass between mainframe computers at police and fire departments and those onboard computers, or mobile data terminals (MDT), inside police cars.

U.S. law enforcement began moving their communications to MDT back in the 1980s, in an effort to put information about surveillance, ongoing

investigations, and other sensitive matters out of earshot of eavesdropping criminals. The transmissions still went out across the airwaves, but to anyone listening in on a regular police scanner, the encoded signals sounded like "a buzzsaw or musical notes without a melody," Bill says. "That sound is really the data."

The move to MDT posed a challenge that scanner enthusiasts like Bill took up with gusto. Using parts readily available at Radio Shack, they built devices known as "data decoder interfaces," simple circuits that translated the analog MDT signals the scanner received into digital signals a computer could
use.

For radio buffs who didn't want to build their own, the Cheeks offered a fully assembled and tested interface with a 3.5-inch floppy disk containing the software for $48, delivered.

"It's a passive device," says Bill. "It just takes those analog signals, shaves the curve off them, and makes them square. That's all it does."

When the decoder and scanner were hooked up to a computer loaded with the right software -- software anonymously written but widely available around the Internet -- users' computer screens would begin filling up with the unencoded text of the intercepted transmissions.

The NYC cops and the U.S. Attorney say that's illegal. The Cheeks say that's hogwash. The
couple says that because MDT communications are encoded rather than encrypted -- a distinction that they say makes all the difference -- devices like the decoder are legal.

They cite a 1996 case, U.S. vs. Larry Gass, where a federal judge in Oklahoma ruled that any
government radio communication that was not encrypted was, in Bill's words, "fair game for the public."

"Well, MDT signals are not encrypted. They are broadcast 'in the clear,' in terms of computer-talk," Bill says.

(Phillip Katowitz, Bill's court-appointed public defender in New York, did not return a call seeking comment on the case. "Don't take it personally," Bill says. "He doesn't call me back either.")

Believing their arrest was the result of a simple mistake, a mistake that quickly would be corrected if they just talked to the NYC cops, the Cheeks agreed to play ball with the prosecutors during the days following their arrest.

In retrospect, they say, that was probably a mistake.

"We knew we didn't have enough money to fight the thing, so we just thought that if we cooperated, we could clear things up," says Bill. "In fact, one of the prosecutors told us that it would just be best if we didn't contact the press."

Over the next few months, Bill kept his friends and acquaintances apprised of his case through e-mail. Over the weeks, the missives telegraphed the couple's increasing confidence that the issue would be cleared up and that things would get better. Unfortunately, Bill and Cindy were wrong.

In late April, Bill told the Reader by e-mail that, "The case has progressed to where our (newly assigned) NYC public defender seems to think the U.S. attorneys might drop the criminal side of the charges if we accept some sort of a civil injunction....whatever the hell that means."

Then, Bill went quiet for several months. He was not feeling well, vague aches and a fever. He stopped selling the data decoder device, but he continued his computer-consulting work and hoped for a painless resolution to his legal ordeal.

In early September, the Reader sent an e-mail to Cheek, asking him for an update on his case. He replied:

Hi! And thanks for asking! Actually not much new. On June 21, Cindy and I went to New York for arraignment and then met with the U.S. attorney and two NYC cops.....who called us every name in the book..... including criminals and liars.

After the meeting, our (worthless) public defender attorneys said the prosecutor was inclined to drop the charges, but the two NYC dicks wanted more time.... That was on June 21, mind you.

Unbeknownst to us until a few days before, there was another hearing held on August 18. (We didn't have to be present.)

We were apprised of it a few days in advance and were told that the charges would be dropped contingent on a few easy-to-agree stipulations.

The 18th turned out to be a hearing where the US attorney begged the judge for six more weeks of "excludable delay," a time period that doesn't count toward a "speedy trial." We had no choice but to go along with it.

Other than that, about all else I can tell you is that the local Secret Service, who first arrested us, gathered the "evidence" and acted on behalf of the Eastern District of New York, feels that it is a shit case that never should have gone as far as it did. I am told that they told the U.S. attorneys as much, too.

But we're still in limbo and know little else.

Thanks for your interest.

Kindest,

Bill

Then, three weeks later, Bill sent out the following e-mail to his friends and supporters.

9/30/99 Hi ya, Gang!

Apologies for this impersonal newsgram format, but there are so many of you friends, associates, and solid acquaintances that I have to use this format to let you in on the latest. If you DON'T want to
receive any more mailings, let me know and I'll take your address off my list.

THE LEGAL SITUATION Least importantly, but relative to Cindy's and my legal situation, the Feds still think they may prosecute us, but they're not for sure. They've won several delays, so Cindy and I are still in a holding pattern. But like I said, that issue is not so very important anymore.....

THE MEDICAL SITUATION The thing I need to tell you about is that recently I was diagnosed with terminal lung cancer. The doctors gave me 3-4 months to live if I don't get treatment. With some relatively new chemotherapy, they said I might get an additional 4-6 months.

The specific diagnosis is "Stage IV Non-Small Cell Lung Cancer." As grim as that prognosis is, there are still rays of hope. Just today, a gentleman gave me a tip on a promising new drug for cancers like mine, now in clinical trials.

I called the company and passed the initial criteria. Hopefully they'll get back to me soon. But
that's why I am writing.....

MY NUMBER 1 REQUEST No one knows it all, including the doctors. If any of you folks know of promising treatments for lung cancer, I will be most grateful to hear about it, whether medical or holistic.

MY NUMBER 2 REQUEST If you know of nothing (as most of us don't), then I shall be grateful for your PRAYERS. I make this my #2 REQUEST primarily because God helps those who help themselves.<

I remain staunch in my belief that prayer and faith are the strongest forces in the universe.

NOT EXACTLY A REQUEST.... As we are without medical insurance and other significant resources,
it's been asked if we accept monetary contributions. Desperation has driven me to say "Yes." Close family and friends took it upon themselves to set up a special account for this purpose.

Contributions can be sent directly to:

Union Bank of California Acct# 0771354719 8359 Mira Mesa Blvd San Diego, CA 92126 Attn: Rhonda Smith or Kevin Smith (619) 230-3800 payable to: Bill or Cindy Cheek or Cynthia Cheek trustee for William D. Cheek, Sr.

or, if you prefer:

Cindy Cheek PO Box 262478 San Diego, CA 92196

MY PRESENT CONDITION At the present time, I am still in pretty good condition overall. There is some pain, especially at night, and it's been weeks since I had a full night's sleep, but still.... I'm holding my own. My pain killers are Codeine #3 and Vicodan. They work pretty good, so far.

WHAT'S COMING SOON I am to see an oncologist today to schedule the first round of
chemotherapy and possibly radiation (not sure), but if I get accepted in a clinical trial, I'll get some kind of a chemotherapy and a chance at a trial drug.

Between working for a living (which I still can and must do), attending to family issues, and settling my private affairs, obviously I won't be able to personally answer much e-mail. I will continue writing for MONITORING TIMES through the December issue, after which I'll take a leave of absence.

I'll continue publishing the WORLD SCANNER REPORT through the end of the year, or as long as I am able. But my immediate objectives are to get into and through the chemotherapy; and to live what's left of my Life to the fullest.

CONCLUSION.....FOR NOW My Life has totally changed over the past two weeks since I learned of the cancer. Things that used to matter a lot...DON'T. And some things that didn't seem to matter are now all-important.

Time with my wife matters most. Time with radio and computers matters the least. Life certainly has taken a strange turn over the past two weeks.

That's all for now. If you want to keep posted to the latest, you're already on my mailing list and will stay there unless you ask to be removed.

Again, please include us in your prayers!

Hugs to all,

Bill & Cindy

A week later, Bill was indicted by the federal grand jury. U.S. Attorney Smith, who only joined
the federal prosecutors office last month from the Manhattan District Attorneys Office, denies the timing of the indictment had anything to do with Cheek's grim prognosis.

Asked if it was at all unusual for prosecutors to indict a dying man, Smith said, "Honestly, I don't think
that's something I can answer. I think you have to look at each case on a case-by-case basis. I think, you know, that factor alone didn't say what kind of case it was, what the other particular factors involved were."

Bill called the indictment "flaky" and vowed to fight.

At the last minute, Bill's attorney and the federal prosecutor agreed to a one-week delay in his arraignment. So at 8:00 a.m. on Tuesday, September 12, Bill and Cindy went to the Sharp Rees-Steely Clinic in Linda Vista and underwent his first chemotherapy treatment.

The visit took longer than he expected. But afterward, Bill, who lost 25 pounds in recent months, felt hungrier than he had in weeks and "ate like a pig all day and didn't get nauseated like they said I might.

"They say it will get worse and that I will lose my hair. But then they say some people have few if any side effects. I think I am the type to not get hit too hard. So here's hoping."

This past Tuesday, Bill was expected to enter his plea. Given his condition, he was allowed to do so
by telephone. Pleading guilty would have allowed him to concentrate on enjoying his final days with Cindy. But Bill planned to fight the charge anyway.

Smith, the U.S. Attorney, refuses to predict when the case might go to trial.

"It's difficult to say," he says. "You see how long this case took before we got to arraignment. In some cases, a date might be set two months later. In other cases, it might be nine months later."

Which means Bill probably won't live long enough to clear his name.

Which explains why Bill Cheek is "pissed."

"The feds are playing dirty pool," he says, "damn dirty, and that happens to be a problem for the nation."

I have a Uniden Bearcat 245XLT handheld scanner. I use it primarily to monitor air traffic, and was wondering if there might be an antenna better suited for the aircraft frequencies.

My assumption is that the antenna that ships standard with the unit is more general purpose. Any suggestions are greatly appreciated.

Thanks.

-Eric

There is no reason to enter frequencies in any particular order for conventional scanning. However, if you intend on trunk-tracking an Ericsson EDACS system, you have to enter the frequencies in a certain order for it to work. Check www.strongsignals.com or www.trunktracker.com for assistance in that area.

Good luck,

Chris

Sure, go down to radio shack and buy the telescopic antenna, it sells
for 9.95 and follow the instructions.

Try Radio Shack, they sell a telescoping whip with a BNC connector for
scanners. Catalog number 20-006. It can be adjusted to a quarter
wavelength for the aircraft band- about 22 to 24 inches. It will easily
work better than the supplied antenna.

Can anyone please give me information regarding where I can find anything regarding Yupiteru radios. I recently spoke with a friend of mine who travels extensively, and he mentioned the Yupiteru name and I was interested in finding out more about the company and their products to see how they stack up against other companies like AOR and Icom. The search I've already done has not given me very many satisfactory sites to go to. I gather that the radios aren't available in the States, but only from Asia or Europe.

If anyone has a Yupiteru, or knows someone that does, I would be interested in chatting with them via e-mail. From what my friend said, they sound like interesting radios.

Thanks.

Ken,
I have a Pro 61 handheld scanner. What would be your opinion on an outdoor antenna for this model? I am also mainly interested in aircraft frequencies.
John

> you mention HIMSELF said he was in "jail"!!!!

Actually, it never made a difference in the first place -- since
that doesn't imply guilt. Nonetheless, you talked about
detainment. I only wished to point out that being detained does
not necessarily mean being jailed.

Heh -- this is fucking priceless!! Here we have a blowhard wanker
who not only believes he's smarter than most, but also bellows it
at every opportunity (hoping someone will eventually believe
him?), falling on his slobbering, lackwit face for all to see. Oh
irony, sweet irony, how hilarious thou can be . . .

It's important to make your lies sound true, Smacksie. I know,
there's obviously a conspiracy against you and you will be doing
the entire net a favor by exposing it. Perhaps next post you may
claim you have been libeled, slandered, and sodomized, and
threaten court action. Or perhaps next post, you may try and
force someone to document their claims. Afterall, if it wasn't
in Newsweek, he'd obviously lying. Or perhaps next post you can
tell us how smart you are again. Why use intelligent arguments
to convince them you're smart when all you have to do is tell
them?

What surprises me is that you'd be stupid enough to actually post
your
hilarious buttfucked arrogant codswallop IN PUBLIC!!

>Thanks.

They make pretty good ones, the MVT-9000 was a good year ahead of the
same capabilities from AOR (The 8200), however Yupiteru doesn't bother
with blocking, or other nonsense, they simply don't sell in the USA,
and as a result, don't have to worry about all this nonsense. That's
the main reason you have so much trouble finding much about them in
the USA.

There is a farily good write up on the 9000 on the Strong Signals web
site

http://strongsignals.net/htm/mvt-9000.htm

and yupiteru in general at
http://www.javiation.co.uk/yupi.html

Generally the MVT-7100 is considered to be the most sensitive scanner
on the market today.

It is illegal to import them commercially...

Message-ID: <3A985688.ED7101A9@qwest.net>
Source record: 69514

I live in Boise Idaho, Today at around 5pm MST I received quite clear on my Icom R75 the following frequencies 33.74, 33.90, 33.84 All East coast skip maybe from Maryland ? Bay District FD and Lenoardtown VFD

I know low band was used in the 60's for Frederick County MD on 33.xx and most of Delaware was on 33.80 etc. Are these Maryland FD's I'm receiving.

I also programmed these into my 780 with an Austin Spectra mobile ant on my roof and the signals came in loud and clear also.

Greetings,

I am in the market for a trunk mounted
scanner antenna to use in conjunction
with a couple of handheld scanners I
have... I am hoping someone can point
me in the direction of a nice, but not
too expensive model... I hoping to maybe
find one with a trunk mount, one that
clips around the edge of the trunk...
I don't really want to put a hole
through the trunk...

Any help would be much appreciated.

Thanks
Brad

But since the circumstance we were discussing caused the individual
of subject to me BOTH jailed & detained, there there really
is no difference, is there?

33.74 I *believe* is Washington County (Hagerstown). Frederick has gone to a TRS but was 46.34 anyway. 33.90 is likely Lancaster or York PA or Hamilton County, OH (Cincinnati).

I JUST CAME FROM THE LOCAL RADIO SHACK, AFTER TRYING TO BUY A NEW SCANNER...THE LITTLE GIRL IN THE STORE WAS TRYING TO ACCOMODATE MY REQUESTS IN THAT I DIDN'T WANT A FLOOR MODEL THAT HAD BEEN THRASHED...AFTER FINDING ONE AT ANOTHER LOCAL STORE, AND ARRANGING FOR IT TO BE DELIVERED TO THE STORE NEXT WEEK, IT CAME TIME TO PAY FOR THE TRANSACTION. THE TOTAL WAS AROUND $200.00, SO I WROTE A CHECK. I WAS THEN TOLD THAT SHE WOULD HAVE TO VERIFY FUNDS...I FIGURED THAT SHE WOULD USE A CHECK SERVICE JUST LIKE EVERYONE ELSE IN THE WORLD DOES..SHE PROCEDED TO CALL MY BANK, AND SINCE IT WAS AFTER HOURS SHE REQUESTED THAT I ENTER MY PASS WORD , AND ALLOW HER TO LISTEN TO MY BALANCE. I TOLD HER THAT SHE WAS F****D UP, AND ENDED THE TRANSACTION AT THAT POINT.

I CAN'T BELIEVE THAT A NATIONWIDE CHAIN WOULD ASK THIS OF THEIR CUSTOMERS, ONLY TO HAVE THEM SAY YEAH IT IS OK TO LISTEN TO HOW MUCH I HAVE IN THE BANK.

I FULLY INTEND TO CALL THE MANAGER IN THE MORNING TO GIVE HIM A PIECE OF MY MIND...

ASIDE FROM RADIO SHACK NOT HAVING WHAT I NEED, I HAVE ALWAYS BEEN TREATED PRETTY GOOD. THIS FEELS LIKE A VIOLATION OF MY PRIVACY, FOR A $ 200.00 TRANSACTION. I WILL NEVER SET FOOT IN ANOTHER RADIO SHACK AGAIN...

ANYONE ELSE BEEN VIOLATED LIKE THIS BY RADIO SHACK? I AM INTERESTED TO KNOW.

BEST,
KEVIN

Pro-94? - You should be able to program "0" (zero) into a channel and
thereby delete what's programmed into that channel now.

You should get an improvement with a mag-mount antenna stuck to the top
of a metal filing cabinet or similar. If not, find a large metal plate to
stick it
to at least, to give it some kind of ground. The cable that comes attached
to a mag-mount should also allow you to put the antenna near a window,
which would also improve your signal.

Wow....

No doubt a scanner like the 780, or even a 2006 can make a scanner
afficionado excited, but a BULGE? Sheeesh

This thread gets better and better as it goes along....

Normal guys get those bulges from members of the opposite sex, and a
780, nice as it is, does not compare to a lovely female form...

Need I say more?

3857. TT Scanning skips for Schaumburg FD dispatch only

Newsgroup: rec.radio.scanner
Date: 2001-02-25 05:26:48 UTC
From: Rick Colombo <colombo@fnal.gov>
Message-ID: <3A989798.4050601@fnal.gov>
Source record: 69456

Most of the time (but not always) the dispatch for Schaumburg, Il. FD "skips" when they dispatch a fire call. (This doesn't happen for the PD or PW.) What happens (this is a Motorola type II TrunkTracking system) is that it's like it momentarily looses the data channel, scans through the system one cycle and picks it right back up. So what you hear is a "broken" dispatch call (you often miss words in the call). I asked a local (neighbor) FD person and he says they hear the same thing. If I actually worked for the Village of Schaumburg, I'd be on the phone to Motorola asking WTF is going on. Has anyone else hear of such a problem? I don't get this type of behavior with other local TT systems, such as: Elgin, Aurora, and Naperville. Any ideas?

The thing I can't understand about RS is how they get off selling returns
and floor models for full retail price. I recently purchased a CD player.
The one that was on sale in the flyer of course they did not have. So I
spent $20.00 more to buy a similar model that was not on sale. I got home
and found out it was "used" The package was re-sealed and it even had
batteries in it. Back I go and the salesperson did not bat an eyelash when i
told him I wanted to return it because it was already used. He then proceeds
to take the floor model and starts putting in the bag. I asked what he was
doing and he says "giving you your replacement" Now why would I return a
used player to get a floor model. I asked him how much he would knock off
because it is a demo and he says "nothing we rotate our demos so regularly,
they are almost as good as new" How can they do business like that? I guess
they somewhat have a monopoly and don't care.

I have a less than one year old Yaesu FR-500 for sale or trade that has the software and cable with it. It was bought new by me less than a year ago. I have no need for the VR-500 now with my new R2 and my shortwave radio here. Anyone interested can feel free to e-mail me at one of the addresses below and then I'll get back to you. I also have all the manual, paper work box and the leather Yaesu protective case for it. Al yours for $275 plus your choice of shipping to the lower 48 states. Thank you and if you have any questions then feel free to e-mail me.

You have to realize that even though they are a nationwide outfit, the local radio shack is actually owned and run by the locals, who have a lot of leeway in what they can pull. Let me tell you about a little Christmas "scam" they pull every year. I went into the store , to get a sattelite TV system. This store is in a fairly large mall. So we get it all up on the counter, and I whip out my RS credit card. I am then told "Oh, you can`t use that here ! We recently had a computer crash, and lost all of our customer data". what they were doing was, they wanted to get together some quick cash, because it was just before Christmas. They can`t "lose their customer data", since it is stored on a server at the main company, not there at the store ! What a bunch of local crooks....

> frequencies.
> John

Well, any type of outside antenna you put up will do better than the supplied rubber duck, especially on the aircraft band. Radio Shack sells a discone type base antenna, as well as a few other types of base station antennas. I use a discone type antenna made by Icom, which is similar to the Radio Shack model. I also have an Antenna Specialist ground plane type antenna; I don't remember the model number. They both work very well. If you don't want Radio Shack products, try mail order. Scanners Unlimited is a pretty good outfit to deal with. As is Grove Enterprises.

Just wanted to correct a few things.....

Motorola did not sell the crystal controlled product line to Dataradio, Inc. The RNet 150 is a crystal controlled unit. In fact, Motorola had to discontinue the crystal product line prior to the sale due to the limited availability of key components. Only the synthesized portion of the boxed RNet product line was sold to Dataradio, Inc. Dataradio, however, does offer compatible product.

The RNet 150 has been superceded by the JSLM RNet VHF which was designed to meet much higher performance specifications. The link in your post references the JSLM RNet VHF specifications.....not the RNet 150 specifications.

The JSLM RNet is available at VHF and UHF frequencies and is a drop in replacement for either the crystal controlled prouducts or the frequency synthesized telemetry products that Motorola used to manufacture.

The new JSLM RNet is available in either a 'pre-farmed' or 're-farmed' (11K0 emission designator) version. Anyone needing a drop in replacement for the RNet 150 or the RNet 450 telemetry radios can obtain one from Dataradio....the JSLM RNet is it.

Regards, Ernie

Radio Shack stores must have a cash flow problem. Many of them carry
so little inventory, that what you see on display is all they have.

Twenty years ago, I bought a crystal controlled scanner. As usual,
the display model (in a locked case) was the only one they had.
When I got it home and opened it, it was completely filled with
crystals for most of the local frequencies I was interested in.
There was only one or two that I didn't want, so I took them back
and exchanged them.

That was about the only good experience that I had with Radio Shack.

3879. Automatic power strip

Newsgroup: rec.radio.scanner
Date: 2001-02-25 17:46:59 UTC
From: Merlin
Message-ID: <3A9944BB.B2E880D3@home.com>
Source record: 69478

This is a little off topic, but if any group knows, it would probably be this one.

I'm looking for an automatic power strip that will turn on other equipment when the master device is turned on. It has one outlet that is on all the time, and it's current is monitored. When the master device is turned on, the current rise is sensed and it automatically turns on the other outlets. Similarlly, when the master device is turned off, the current drop is sensed and it automatically turns off the other outlets.

Are there any places that still sell these?

Hi all
I was wondering to buy a palmar scanner receiving about from 1-1300 Mhz
I could buy the Icom IC R2 at about 220$ but it seems to have serious
intermodulation problem in low VHF: do you conferm this?

Which other scanners do you suggest me whit the following features?

- no more 220$
- about 1-1300 Mhz
- palmar
- earphone jack
- external wall charger jack

Thanks a lot!!

A few years ago I went to the local RS to get an electric eye alarm for my shop. The clerk goes to the back and gets a screwdriver. He then proceeds to deinstall the electric eye alarm from the RS's door! I can't believe that he really means to sell me this, so I just watch.

He walks over to the counter and stuffs the electric eye and mirror in a bag. He then starts to write up a bill.

I left.

I'm looking for a fully functional Icom IC-R2. No gaps model is preferred, but I will consider all offers. Keep in mind that you can get a new US model for $150 and a new UK model for $180-190. E-Mail me what you've got and how much money you want. The best deal gets the sale!

Message-ID: <250220011256502663%slogan@mac.com>
Source record: 69485

I have a Optoelectronics R-10 Interceptor. This picks up nearby radio transmissions from 300 mhz to 2 Ghz. This is continous coverage no frequency ranges are cut out! Works fine and comes with an AC adaptor. The nicad battery pack has gone dead but you can get a replacement from Optoelectronics. Selling without antenna (I like it I'm going to keep it). Price is $150 plus shipping, check ebay for my references. Thanks!

I don't own a 780 xlt Roger and don't plan on it.

When you grow up you might learn to explain your observations a bit more clearly.

OTOH, I doubt it.

Glenn

I like my Yaesu VR-500, but it is not without its problems as well. Also, you probably won't find a new one for $220 or less, but that would be a reasonable used price.

There's another current post here you might be interested in:

Chino PD is part of the San Bernardino Co. Trunking system
Motorola Type 2 800 MHz. You need a trunking capable scanner.
If your scanner is not trunking capable, then the conversation will hop from frequency to frequency.

Here are the frequencies for the San Bernardino Co. Trunking system:

851.5000 859.9250 860.3250 861.2000 861.8500 862.2000 862.8500
863.8500 864.8500 865.8500 866.1375 866.3625 866.4125 866.6375
866.8250 866.8625 866.9125 867.1375 867.1875 867.3875 867.6125
867.6625 867.8625 867.9125 868.1375 868.1875 868.3625 868.4125
868.8375

my neighbors were my friends....who would think that they would listen to my personal phone calls....or as they did, tape them....it happened in March of 1994...I don't know the people that your son listened to or how they really feel. I know that I felt like I had been raped!!! Not only did it upset me, but my family too...needless to say we had to leave our home and move. 6 years later I don't think of it as much as I don't see them...out of sight out of mind, I guess...I still have one of the tapes, it has the date it was recorded and number 4 of 4. Tried to get help,and it was against thew the lawyer said, but it would take alot of time and money and couldn't be sure of the outcome. Please let your son know that this can hurt people.

I have for sale a very nice Realistic Pro-75 handheld
scanner.
200 channels in 10 banks, service search, duplicate
frequency
alert, search lockouts, etc. Nice little conventional
scanner,
works perfectly. Comes with manual but no box.

$50 plus help with shipping.

Thanks,
Jon

Sounds like either an idiot or an asshole. Customer info is stored locally, but that is irrelevant to RS card sales. BTW if they were out to make more money, they would have taken the card, they get a cut on the interest.

You should know though that your assumption that locally stores are run by locals, (franchises) is dead wrong in most cases.

As far as the cheque issue, lets face it, a grocery store is about the only place I know that I am sure will still take a cheque and even there you will probably need the store "cheque" card. Cheques are the worst source of retail fraud known. Anyone who wants to complain that they are honest and should not pay for the actions of criminals should remember . . . you already do every tome you shop . . . anywhere. The best way to cut a stores fraud losses is to stop taking cheques.

As far as the other folks that complain that they have been sold "used" goods. There are stores that don't do this, but they also don't let you return something that works just because you "don't like it" or it doesn't work as well as you thought it would. RS does. the rule of law is, if you buy it and it works, its yours. And this display model BS, I mean give me a break, do you go into a car dealership and expect a discount on a car because other people have seen it? That car in the lot could have been shit on and you will pay full price, but if its a 200 dollar radio from a display case you want a deal.

If they did that for you, they would have to do it for everybody, give you 25 off, give everyone 25 off. Multiply that by 3000 stores (a guess) and that's a lot of money. Who do you think is going to pay for that discount shareholders? I don't think so, more likely you are. We had a company up here in Canada that only sold new in the box, you went into the store, looked in a catalogue, and picked out what you wanted. They aren't in business any more. Radio Shack does that too, just call the number in the catalogue, or go to the web site, Make sure that you have your credit card ready, because they don't take cheques either especially in the US where nobody in the next town has probably even heard of your bank.

What I really want to know is, where is this wonderful store that you all shop at when you aren't going to Radio Shack to gain an experience to whine about. You know, the one that takes personal cheques all the time no questions asked, the one that will take back your scanner just because your scanner won't pick up the Mainsville police department, give you a full refund and then just throw away your return . . . because they won't sell a used product. Oh yeah, and the one that employs PhD's in electrical engineering at minimum wage to ensure that they are fully capable of answering absolutely any question you might have about any product that they sell, or have ever sold in the last thirty years. I would like to go there

too.

Until I know, I will keep going to the store that sold my dad a set of speakers in 1975 and honoured their warranty in August 2000, extending the lifetime warranty to the new product. I don't think that Radio Shack is perfect. I do think that there are a lot worse places to shop, but we don't ever hear about those stores, do we because this is a scanner NG and you know and I know that there is not another national (ok what do you call it when they are national here too?) store that stocks what we need to do what we like here, listen to scanners? You know, the scanners, antennas, switches, cables, frequency lists, parts, adapters, external speakers, amplifiers, and so on that you can't get without ordering them from Podunk (no insult intended if anyone actually lives in Podunk) and waiting a couple of weeks for it to arrive.

If you have a complaint, pick up the phone and call them at their 1-800 number, that will show you right away how "independent" those local stores are. Fix your problem instead of complaining about it. Just remember, for every person that responds to your post here with a similar story, there are at least ten other people out here thinking what a waste of time it is for us to have to sift through this BS about RS because we have been there and dealt with it and come out ahead by not jumping up and down like a five year old whose parents have told them they have to eat their vegetables before they get their desert.

If that doesn't work, take a pill, have a coffee, go for a walk. Frankly, still being mad enough when you get home to boot up, log on and type up an all caps tirade and send it is more likely to promote heart disease than earn you a visit from the scanner fairy bearing a brand new scanner. Unless that fairy also works for your local paramedics and is also interested in giving you a free ride.

Was the girl Good looking? Cause it sounds to me like she wanted to know if you were worth any time and effort.

As for her asking you to enter your passcode, that is illegal in just about every state. And RS, I know for a fact, runs checks to the company. Should they need to inquiry about acceptable balance, they talk to a "middle man", generally someone in the main office, or through an automated system. I've had similair deals with that, it was actually a paycheck at Albertsons, they didn't recognize the employer cause it was from out-of-town, so... have fun

The thing that i cant stand about RadioShack is that they have no fucking idea what they are selling! You ask for help or ask what something is / does and they type in some keys on their computer and say "I cant help you sir' or "according to the compter we stock this.." or some shit like that

For fucksake, they should at least learn what they are selling before they can expect anyone to have ANY respect for them.

3923. Trunk Freq. identification

Newsgroup: rec.radio.scanner
Date: 2001-02-26 10:09:06 UTC
From: eee1@earthlink.net
Message-ID: <3a9a2b8a.20493122@news.earthlink.net>
Source record: 69422

I have several different types of trunking systems in my area. Two of them are identified in the frequency list as Motorola II systems, and they work fine. Their frequencies are in the format, 856.4625/857.4625, and 856.7375/857.7375. Others are listed as type unknown. These are in the following formats:

855.2375/855.4625: This one will not search in trunk mode, but one of the freq. can be monitored in regular scan mode.

856.9625/875.9625: When I try to scan in trunk mode an error is displayed. Again, one of these freq. can be monitored in regular scan mode.

856.4375/857.4375: Error is displayed when I attempt to monitor in trunk mode.

I've tried to setup the non-Motorola II systems in Type I and Fleet systems, but have had no luck.

Is there any way to identify the system type by the format of the frequencies? Are there 800 mhz non-truncked systems?

I've searched in www.truncktracking and www.strongsignal sites, but didn't find any help.

I have the BC895XLT.

Thanks in advance for helpful information.

Erin,
Just in case your post is actually true (not likely), just what were you doing that the facts, when made public, forced you to move to escape the news? (Voted Democrat? Joined PETA? Interned for Bill Clinton?) People, let's get real here. A cordless "phone" is a full duplex RADIO! Anybody that says anything on one of these that they wouldn't say on their local AM/FM radio station is a fool. You have no reasonable expectation of privacy on one of these things, regardless of what the law says. You can't legislate morality or physics. I have a late model, spread spectrum 900 MHz digital model, but I still switch to a hard-wired phone when anything private or confidential is discussed, and in such circumstances I always check that the party on the other end is not on a cordless. If you don't take these steps you are stupid.

Mark

PS: I find your statement "I know that I felt like I had been raped!!!" to be an affront to any person who has actually been raped or sexually molested. To compare an invasion of privacy (which wasn't very private or much of an invasion) to a physical/sexual assault is ludicrous.

Just take a tap off the rf agc line, feed it to a buffered meter or
LED array.

Skyman....

For the record the late B*ll Ch**k wrote several books regarding
scanner modification. You can find them here:
http://crbbooks.com/catalog_2_item/mods-set.htm
(Mentioning his name carries great risk in this group. I'm taking
my life into my hands just stating what I already have. Beware! ;-))

Additionally, this site lists mods for many scanners. Some of the
mods (look for RS2006) are for the addition of an S-Meter. Not knowing
what scanner you have.... I don't know if this site will help you.
Levertheness, it's information ...
http://www.mods.dk/

Lastly, review rec.radio.info for regularly posted info regarding
all kinds of scanner stuff.

Later,

Hello,

I am thinking of upgrading my ancient Bearcat sc-150, and would like to get a scanner with much broader capabilities. I have heard good and bad about the Alinco DJ-X10T and was wondering what opinions out there are? Also are there any other receivers which would be good to look at. This is about my price range and help would be appreciated. Thank you.

Scott

Of the newer crop of handhelds on the market I like the Yaesu VR 500.
It does a good job on the scanner bands and it even does ok on the SW
bands for receiving the big guys. You might also consider the Icom R 10
which does a decent job also.

Hi folks.
Long time Shortwave listener(REALISTIC DX-390), would now like to get a good scanner, no more than $500 spent in total equipment (would really rather be closer to $200-$300 but oh well.... Want something good, not lacking features that I'll wish I had later, but not overkill.

For example, the Bearcat895XLT seems to be up my alley (around $200?), I like the idea of hooking it up to the computer. Or RS-2052? I'm having a hard time finding info on Grundig and other names I'm familiar with. I like that price range as it leaves room for software/antennas/signal amps and still come in under budget. Looking for desktop, not handheld, computer interface (if affordable is great). Full trunking features nice too. I'm in South Florida if that matters. Also, please tell me good on-line sources, or if you are familiar with my area, other places to buy. Also if you are aware of any new models coming out and think I should hold off, that would help too.

also, no offence, but please tell me your credentials. if you have only used one model and love it, that's great, and I'd like to hear from you. if you've used many and base your opinion on that, that's very helpfull.

i'm sure this question gets posted a million times, so sorry about that, feel free to keep your answer brief with little or no explanation if you choose to reply.

thanks!

Currently, without a doubt, the hands down best scanner to do all in
one package is the Uniden 780 XLT, around $350.00 or so.

Being in South Florida, the Trunking capital of the world, this unit
will be invaluable to your scanning needs.

Enjoy...

Dan

Yeah, like at least once per year. What a terrible burden NYSING imposes
for a FREE service!

So, John, why did you apply for membership if you think NYSING's rules suck?

Source record: 69383

Hello. My company is using cordless phones, but the phone company is no longer supporting it and the purchase price is over $1000.00. We have been having a lot of trouble like drop out and poor reception. I was told by the radio tech that the ones we have are full DDS and freq hopping in the 900 range.

Currently we are trying some of the top of the line comsumer models. So far its very good, but at a certain distance the sound drops which I'm not suprise. Right now we are looking at the higher 2.4 gig phones.

My question is what difference does the commerical have over the consumer. What edge does it hold? Also does anyone know how we can increase the range of the consumer phone? Thank you.

Yo - Toilet Boy

R E A L I T Y C H E C K

Toilet Boy, you're still a liar and a fraud.

1. It was proven you lied about the first date of your appearance on the Internet.

2. It was proven you lied when you denied making the claim about patronizing under age child prostitutes.

3. It was proven you lied when you claimed to have written "several technical articles" for the ARRL and other technical publications.

4. It was proven you lied when you claimed to have adopted your dead sister's children.

5. It was proven you lied when in the span of two weeks you claim to be married in one forum and single in another.

6. It was proven you lied about having college degrees.

7. It was proven you lied when you denied you were identified as a known Internet abuser by Joe Greco on his published lists of spammers and idiots.

8. It was proven you lied when you claimed you weren't stealing Internet access and your employer terminated you for theft of services.

9. It was proven you lied you claimed you've never used fictitious or illegal Internet address.

10. It was proven you lied when you claimed you were not the most prolific poster of off topic messages.

11. It was proven you lied when you said WD-40 was unsuitable for electronic use by posting another endorsement from Roy Lewallen, w7el@teleport.com, which you ignored.

12. It was proven you lied about your place of employment when others
posted your work telephone and related data. It was also proved that
you worked at that office and not your retired father.

13. It was proven you lied when you claimed that Bill Cheek had never
been a member of Mensa.

14. It was proven that you lied when you claimed
to have never lost an ISP for your forged cancels.

15. It was proven that you lied when you denied
using numerous fake identities on the Internet.

16. It was proven that you lied when you denied
you've never blown up a repeater system through your incompetence
and total lack of technical expertise.

17. It was proven that you lied when you denied
trying to break into other computer systems using Back Orifice.

18. It was proven that you lied when you claimed
you had "acquired MORE FCC licenses ... than could be counted
on one hand!"

19. It was proven that you lied when you claimed
you have made your "living from the Radio Communications Field
for most of the last 15 years."

20. It was proven that you lied when you denied
having stalked Bill Cheek for over three years.

21. It was proven that you lied when you denied
being kicked off Fidonet by Bill Cheek.

22. It was proven that you lied when you claimed
Bill Cheek had been kicked off of Fidonet.

23. It was proven that you lied when you claimed
a police had been filed supposedly about harassing phone calls
made to you at your place of work.

24. It was proven that you've emailed death threats
to your detractors on the Internet.

25. It was proven that you lied when you claimed to
"have helped resolve" the problems of the scanner newsgroups
and have "rid this NG of trouble makers."

26. It was proven that you lied when you denied
sending bogus complaints using aliases to the Internet providers
of your detractors.

27. It was proven you lied when youï¿½ve made hundreds of rouge
cancels over the course of the last several years

28. It was proven you lied when denied stalking Bill Cheek since his death

To all:

Hi!! My name is Chris. I am the list owner and moderator of a brand new scanner mailing list!! It is called "CenCalScan" and is based at Yahoo. My list is for scanner enthusiasts that live in central California (Sacramento-Los Angeles).

Once you subscribe, you can post frequencies and any breaking events that you feel would interest us!!

If you do not live in central California, please spread the word that this list is available!! I would like to see my list be as successful as possible!!

There are two ways to subscribe:

[1] Send a blank email to:
CenCalScan-subscribe@yahoogroups.com

[2] Go to the list's homepage (the web address is in my signature line below) and fill out the box with your email address.

Thanks,

--

Oh Bud....
You want me to make Macky look even worse??? Okay...here it goes.

Hey Doltboy...
I have known Bud since 1981...
Bud has been a very good friend of my family...since 1981.
Bud and I have worked together in a very official capacity...since 1981.
I trust Bud with my 14 year old daughter...and I can't thank the guy enough for "radio baby-sitting" my child while she waited in the car while daddy worked a crime scene....let's see a PS dispatcher do that in a major city.
When my wife can't get me on the phone she calls Bud first...cause he always has contact with me in the San Diego or Baja Norte. My own dispatchers in Mexico call Bud to track me down.
Bud lives so close to my San Diego home that he could throw rocks at my back window.

Now comes the fun part....
Didja notice something here John/Rick/Terje???
I can't say you had much of a life since 1981...but since I have known Bud he has been a witness to many,many,many historical events in 2 countries...and has had very intimate knowledge of some very "inside" stuff.
It's really ashame that a wannabe like Johh Macky can't look to Bud as his mentor,because Bud knows soooo much stuff, it would blow yer little mind John/Rick/Terje!

And yes...he can crush you like the little bug(s) that you are.

Buy my calculations...1981 would have been John Mackys first attempt at puberty.

Ok John...tell us about yourself!

4002. voltage transformer for scanner

Newsgroup: rec.radio.scanner
Date: 2001-02-28 06:12:50 UTC
From: GSB <georgeb@mminternet.com>
Message-ID: <t9p5k6arpbho8f@corp.supernews.com>
Source record: 69299
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner

I am planning to buy a scanner from the UK and use it in the USA. I was told the UK scanners have the 220VAC plug which is different from the 110VAC from USA. Does anyone know exactly what type of plug the UK uses (type) and what kind of voltage transformer and plug adapter is needed to work in the USA.

SOunds like you may not have set those frequencies as TRUNK
frequencies and set the trunking type. I'd start by double checking
that. Also, are you sure the frequencies are good and that one of
them is a control channel?

the UK uses a "unique" 3 pronged plug with flat pins, different to all the rest of Europe. The earth pin is vertical and longer than the other two horizontal pins for neutral and live [hot]. It is called a BS1363 plug or just a "UK plug"! It has a fuse inside it as well.

It is actually the most common electric plug in the World, as a lot of Asian countries that were former British colonies still use it!

However, unless you radio will run on the mains electric power only, you should be able to just import the radio and use standard "wall-wart" power pack from rat shack or mouser [being careful of the polarity and maximum current rating, and that some [all?] scanners use the *Smaller* coaxial power plugs for DC input].

The trunk Type is 2 200. The "M" is to the left of Trunk. I have the same 16 frequencies as I have on my Pro 2050 which is operating perfectly entered in the Trunk Bank. The 16 frequencies are being transmitted from three different locations within 30 miles (line of sight) East, South and West. In South Central Louisiana there are no hills. Just flat terrain. Thanks for your reply.

The key issues are: voltage and amperage requirement of the scanner and
polarity (if any) on the input plug. Find that out and pick up a "wallwart"
to match.

I cannot imagine why you'd want to buy a scanner in
rip-off land.

You will have to discard the UK adaptor after you've
checked what its output voltage is. Then buy an American
one of the same voltage (and power handling capacity in Watts
or mA). Make sure that the plug which goes into the scanner
is the same size as the one on the UK adaptor.

The 230V AC transformer won't give sufficient output on
the US 110V supply.

most euopean versions have the same features that the canadian versions do. the only place that has major differences are the us models of scanners. if it is a RS scanner. Then canada is outa luck. since RS here gets their stuff from US. but transformer wise. it is the same. just don't use the eurpoean one. get one from your local store. as long as it has the right polarity/amperes and voltage. it will work fine

Dev

character in the right margin.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a team of G-men protect the president while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some models, like the early Uniden SportCats and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $1500 Icom R8500 and $2000 AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2042 and PRO-2006 base/mobiles, the Uniden/Bearcat BC895XLT, BC245XLT, SC200, and Radio Shack PRO-91 and PRO-94 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites. The ICOM IC-R2 and Yaesu VR-500 are the two smallest "pocket" scanners which perform. Both are tiny enough to fit comfortably in a shirt pocket so you can monitor without attracting undue attention.

Looking for value? At $170 discount price, the 100 channel Uniden/Bearcat BC278CLT base is a good value and available at most Sears and Best Buy stores. The Uniden Sportcat SC200 portable performs very well is an excellent value at its $220 street price.

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your

scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, http://www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance. The Premier (Prime) RD-9 and RD-9SMA are about the same length but even thinner.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas. The Austin Condor is available from Grove Enterprises.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter

and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A (available from Amateur Electronic Supply) or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is http://www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is http://www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. Modifying any scanner to receive cellular phone signals is now considered illegal. By federal regulation, new scanner models must be designed to they cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the

Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (http://www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 7825 Black Street Rd., LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial

broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, http://www.grove-ent.com) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the

public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM. The PerCon Spectrum CDROM sells for under $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM, too.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)

dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes an extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an

invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

Other scanner mailing lists include: scanner@onelist.com, scan-l@onelist.com, scanner@qth.net, and sonofrcma@onelist.com.

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about

4 PM. You must purchase a lunch since we get the room for

- 2 -

free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published on the CARMA email list, carma@qth.net. You can obtain a free electronic subscription to the CARMA email list. For more info, see:

http://www.qth.net

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Most meetings are be held on Saturdays at Phillies Pizza, 6300S. Kingery Highway, located in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook, IL.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM instead.

You can query FCC databases directly from this web page: http://www.fcc.gov/searchtools.html

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Other frequency web sites include:
http://w5gb.nmsu.edu/kc5kto/,
http://www.fordyce.org/scanning/, and
http://www.scannerway.8m.com.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'.

(See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of

information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army

Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each

equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals

weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

Uniden sells refurbished scanners dn you can check current inventory at their web site:
http://www.uniden.com/docs/store

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

You may be able to obtain manuals for older Midland scanners from:

Midland Consumer Radio Products
1670, North Topping,
Kansas City,
MO: 64120
Phone: 816-241-8500

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer the ICOM IC-R2, Uniden/Bearcat BC3000XLT, and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered at your local Radio Shack store. Each Radio Shack store has a book containing frequencies and stock numbers. The crystals are mailed to your home within 10 days.

You can also order scanner crystals from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.
Middlesex, NJ 08846
tel. 908-356-7787

Cal Crystal Lab Inc.
1142 N. Gilbert St.
Anaheim, CA 92801
tel. 714-991-1580

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

G & G Communications
9247 Glenwood Drive
LeRoy, NY 14482.
tel. 716-768-8151

Jan Crystals
Box #-6017
Fort Myers, FL 33911
tel. 941-936-2397

Monitor Crystal Svc
124 W Walnut St Watseka, IL 60970
tel. 815-432-5296

Short product summaries for over 70 scanner models appear in
a separate article, entitled "Scanner Radio Review Briefs."
You may share information with scanner collectors via the
"vintagescanners" mailing list at:

http://www.onelist.com/group/vintagescanners

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 2001 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation sells crystals, antennas, power cords, owner's manuals ($11 ea) for some older (pre-Uniden) Bearcat scanners. Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229, email: electra@tcon.net,

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553. You can also download an electronic copy of the user manual for recent Bearcat models from the Uniden web site:

http://www.uniden.com/docs/service/support.htm

Some schematic diagrams may be obtained from Uniden's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Multec Communications repairs several model Uniden scanners, but not Electra models. (http://www.rfwiz.com or email multeccomm@rfwiz.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Matt Roberds fixed a BC220 which experienced memory loss if power was removed by resoldering the positive wire to 2-AA battery holder.

As built, the BC220 logic board is grounded only through its mounting screws. In the BC220, Matt recommends adding real wire ground jumpers from the main board to the feature (logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig and Karl Klein repaired their BC210XWs by replacing the 22uF/35V C98 capacitor.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This display is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of

a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Matt Roberds repaired the Montgomery Wards version of a BC220 and contributed these insights:

"I did add some heat-sinks, but you have to be careful what you do with the TIP29 on the logic board. I added a long, flat heatsink to it and immediately created a whine in the audio. I didn't use an insulator, as this was a temporary first-try. As far as I can tell, the heatsink was radiating noise from the logic board into the front end on the radio board, which ended up being just below the heatsink. Bypassing the TIP29 (a voltage regulator) with disc ceramics didn't work; using a smaller heatsink and an insulator fixed the problem."

"There is also a 220 ohm 1/4 watt resistor on the logic board. It feeds the TIP29 from the main +16v supply. It looked a little crispy. I pulled one end and measured the current through it and it was about 30-35 mA. This works out to right at 0.2-0.25 watt dissipation. I didn't have a higher-wattage resistor, so I substituted 2 470-ohm resistors in parallel."

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to

switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855.

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, consider the receivers made by Reach Electronics. Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Another Plectron-like receiver, "The Informer," is made by
Federal Signal and sold by Brinkley Electronics:

Brinkley Electronics
P.O. Box 502
Wallburg, NC 27373
(336)769-2902
FAX: (336)769-4029
email: sales@brinkleyelectronics.com
web page: http://www.brinkleyelectronics.com

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

HAMFEST/COMPUTERFEST CALENDAR 2001 - ILLINOIS
last updated February 4, 2001

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Ralph Zancha, and ARRL for providing some of the information.

MARCH 2001

Mar 4 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

Mar 4 (Sun): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM.

Mar 11 (Sun): Tinley Park, IL - Giant Computer Show & Sale (see below). Tinley Park Convention Center, 185th St. & Harlem Ave. 9:30 AM - 3 PM.

March 25 (Sun): Grayslake, IL - Lake County Fairgrounds. North Shore Radio Club (formerly LAMARSFEST.) http://www.ns9rc.org. ALL INDOOR, Radio, Electronic and Computer Swapfest V.E. Testing 9AM to Noon, Door Prize Drawing Every Hour, Admission $6 at the gate / $5 in Advance. Door Open at 8 AM. Set-up at 6AM. Vendors may set up on Saturday 3/24/01 Set up hours to be determined, probably noon till finish. Free Parking. Cafeteria Open. Talk-in Simplex 146.52 & NS9RC Repeater 147.345 +.600. No sales of firearms or food products will be allowed.

APRIL 2001

Apr 1 (Sun): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM.

Apr 1 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

Apr 29 (Sun): Arthur, IL - Moultrie ARK. 8AM - 1PM. Info: Ralph Zancha, WC9V, PO Box 55, Lovington, IL 61937. Daytime phone 217-543-2178 evening 217-873-5287. Email: rzancha@one-eleven.net Or write to M.A.R.K., P.O. Box 91,

Lovington, Illinois, 61937.

MAY 2001

May 6 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

May 6 (Sun) - Sandwich, IL - DeKalb Hamfest. Sandwich Fairgrounds (intersection of Suydam and Gletty roads). 8AM - 1PM. 3 indoor buildings. Admission $6.00. No VEC testing. Talk-in on 146.730/- or 146.520. Info: W9ICU at (815)895-3310, email w9icu@home.com. http://tbcnet.com/~jleonard/hamfest.htm (small to mid-sized hamfest. Nice drive in the country. Good restrooms. -AJ9S)

May 27 (Sun): Chicago, IL - Chicago ARC Hamfest. DeVry Institute of Technology, 3300 N. Campbell, Chicago, IL. 8 AM - 2 PM. setup at 6 AM. Indoor/outdoor flea market. Free parking. Tickets $5 at the door. Outdoor fleamarket space is free. Indoor table space is $1.50/ft. Info: George (773)545-3622 or Dean (708)331-7764 or write to CARC, PO BOX 410535, Chicago, IL 60641-0535.

JUNE 2001

Jun 3 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

Jun 3 (Sun): Princeton - IL Starved Rock RC. Bureau County Fairgrounds. Exit 56 from I-80. Admission $7 (ouch!) at gate. Talk-in 146.955, -600, PL103.5 Hz. info: tel. 1-815-856-3773, (Usually an excellent hamfest. Unlimited space outdoor flea market, some indoor space, though few big name commercial vendors. Crude restroom facilities. - AJ9S)

Jun 10 (Sun): Wheaton, IL - Six Meter Club of Chicago. DuPage County Fairgrounds. 2015 Manchester Rd (north of Roosevelt Rd, east of County Farm Rd). Gates open at 7 AM, buildings open to public at 8 AM. Admission $6. VE testing. Talk-in on 146.52 and 146.37/97 (107.2 Hz PL). Info: http://cyberconnect.com/orion/hamfest.htm or contact Joseph Gutwein, WA9RIJ, 7109 Blackburn Avenue, Downers Grove, IL 60516-3925. Tel: 708-442-4961 . Email: wa9rij@mc.net

JULY 2001

Jul 7 (Sat): Oak Creek, WI - South Milwaukee ARC. American Legion Post 434, 9327 South Shepard Ave. Admission $5. Starts at 6 AM. Talk-in 146.52 MHz (WA9TXE). Info, call (414)762-3235.

Jul 8 (Sun): Peotone, IL - Kankakee Area Radio Society, Will County Fairgrounds. I-57 to Peotone exist 327 (East). Free parking. Talk-in 146.94 MHz repeater. http://www.w9az.com.

Admission $6. Info: Chip Moore, K9IOC, 289 S. Euclid Ave., Bradley, IL 60915. Email: karsfest@yahoo.com

Jul 15 (Sun): Washington, MO - Zero Beaters ARC Hamfest. Bernie E. Hillerman Park (Washington Fairgrounds) Free parking. Free admission. VE exams. Talk-in on 147.24 MHz repeater. Info: Keith Wilson K0ZH (636)629-2264, fax (636)629-1196. Bob Goza W0BOB (573)484-3718, w0bob@arrl.net. http://www.yhti.net/~w0bob/zbarc

Jul 22 (Sun): Sugar Grove, IL - Fox River Radio League Hamfest. Waubonsee Community College. Rt 47 at Harter Rd. Admission $5. http://www.frrl.org/hamfest.html (good, small to midsized hamfest. Easy parking. Modern restroom facilities. - AJ9S)

AUGUST 2001

Aug 5 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

Aug 12 (Sun): Peotone, IL - 67th Annual Hamfesters Hamfest. Will County Fairgrounds. 45 mintues from Downtown Chicago, take I-57 to Peotone Exut 327 (East). 35 acres of free parking. 14,200 square feet of exhibits open at 8 AM. Flea market open at 6 AM to 3 PM. No additional charge for flea market space. Rain or shine -six covered pavilions for Flea Market. Tickets are $5.00 in advance with double stub, $6.00 at gate with single stub. Children under 12 free. Advance ticket sales and information: SASE and check by July 25th, Robert Nelson, WB9FWR, 1720 Vollmer Rd., Flossmoor, IL 60422. (708)756-7984, email WB9FWR@aol.com. Talk in on 146.52 simplex and 146.64-(107.2) Stars Repeater

Aug 26 (Sun): Joliet, IL - Bolingbrook ARS Hamfest. Inwood Recreation Center, 3000 W. Jefferson St (Rt 52). Outdoor flea market setup at 6 AM. Admission $5. VE testing. Talk-in 147.33+ MHz and 224.54- MHz repeaters Info: Tom Ballard N9LJY, (630)739-3740. (Small to midsize hamfest with good restroom facilities - AJ9S)

SEPTEMBER 2001

Sep 2 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

Sep 22 & 23 (Sat & Sun): Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. Admission $8, good both days. Ladies program - Arts and crafts. Grounds open Thursday at noon. Flea Market open both days at 6 AM. Exhibit buildings open Sat 8 AM - 4 PM and Sun 8 AM - 3 PM. VEC testing. Free camping and parking. Talk-n on 146.16/76 MHz (107.2 Hz PL). Info: http://www.chicagofmclub.org.

Tel: 630-628-1501 (the biggest and best hamfest in northern IL - AJ9S)

OCTOBER 2001

Oct 7 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

NOVEMBER 2001

Nov 4 (Sun): Davenport, IA - Davenport Radio Club. Iowa National Guard Hanger, Mt. Joy Airport. No tailgating. Talk-in 146.88 MHz repeater. http://www.gwltd.com/hamfest

Nov 4 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

DECEMBER 2001

Dec 2 (Sun): Gurnee, IL - Computer Country Expo (see below). Ballroom of the Holiday Inn, 6161 W. Grand Avenue.

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Tinley Park Civic Center, 185th St. & Harlem Ave., Tinley Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. for adults and children under 12 get in free. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held monthly from 9:30 AM to 4:00 PM. Admission is $6 with free parking. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, etc. Held in the Ballroom of the Holiday Inn, 6161 W. Grand Avenue, Gurnee Illinois. For info, visit the web site at http://www.ccxpo.com.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.
Radio Shack PRO-2004	R148 47K remove R148
	or replace with 220K.
	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)
Radio Shack PRO-2006	R152 33K try 100K or higher.
Radio Shack PRO-2022	R91 33K replace 33K
	with 220K.
	Between pins 12 & 14
	on IC-1 MC3361
Radio Shack PRO-2035	100K replace 100K
	with 220K.
	Between pins 12 & 14
	of TK10420 (IC-2)
Electra/Bearcat 220	R75 2.7M may be ok as is
Electra/Bearcat 20/20	R75 2.7M may be ok as is
Electra/Bearcat 250	R66 2.2M may be ok as is
Uniden/Bearcat 760XLT	R58 22K replace with 6.8K
	or other value.
	(select value for
	the particular radio.)
	Located on pin 14
	of MC3359P IC
Uniden/Bearcat 800XLT	R91 860K replace with 2.2M.
	Located on pin 14
	of MC3359P IC
Plectron P1	R81 180K may be ok as is
Plectron 700	R96 180K replace with 560K

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 - 2001 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also

archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.samswebsite.com

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)241-8742, or through your local Radio Shack store. You may be able to obtain some technical assistance from Tandy by calling (800)843-7422, option 2. The RSU (Radio Shack Unlimited) phone number is (800)-433-2024.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 7825 Black Street Rd., LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004, but Robert Cummings has modified an LCD from a Miller Engineering (http://www.microstru.com) experimenter's kit and fitted it to his PRO-2004. See http://home.cfl.rr.com/scan/Backlight.html for details.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the

squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad (PRO-43 keypad is RSU#10789808) may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A
crystal scanner are not working and the lamps for those
channels won't light, replace IC4 or IC5 (type 7400A).

library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

You may share information with scanner collectors via the
"vintagescanners" mailing list at:

http://www.onelist.com/group/vintagescanners

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004
Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable

reprint fee.

ALINCO

DJ-X10T: 1998 vintage. Rugged construction - metal back.
Multimode frequency coverage 0.1 to 2000 MHz (minus cellular
bands). 20 selectable step sizes from 0.05 to 500 kHz.
Knob atop the radio clicks when rotated and serves as a VFO
knob, channel selector, and menu navigation control.
Several battery pack options for NiCd and alkaline battery

cases. Furnished with an EBP-37N 4.8 V, 700 mAH NiCd pack and a sturdy 11 hour drop in charging stand. Loaded with firmware features and complicated to use. Two VFOs and 1200 channels in 30 banks of 40 channels each. Memory banks are cryptically designated, though you can scan combinations of banks. Each memory channel can be programmed with the frequency, an 8 character label, attenuator, a skip (lockout) flag, and mode (WFM, NFM, AM, USB, LSB, CW, AUTO). Very slow 6 ch/sec scan rate. Rescan delay is about 1 second and cannot be disabled or changed. Auto Memory Write stores up to 40 frequencies but does not check for dupes. 20 linkable search banks with labels. Up to 50 frequencies per search bank can be locked out. Digital clock with on/off timer. Battery saver can be disabled. Ability to scan or search for signals above a selectable threshold or channels with a specific mode. Band scope 7 or 40 steps wide. In short, 30 - 1000 MHz sensitivity is good, few birdies and little intermod. WFM broadcast reception very good. The DJ-X10T squelch can be set to one of 10 levels. We had to keep the squelch set to SQ3 or higher, otherwise it opens at inappropriate times, especially when the battery saver is active. The DJ-X10T instruction manual does not specify the IF (intermediate frequency) scheme. Filters inside the DJ-X10T imply 0.455, 10.7, and 45 MHz IFs. Our tests indicate a first IF of 736.25 or 275.45 MHz, depending on the frequency to which the DJ-X10T is tuned. Our DJ-X10T hears images of cellular phone signals clearly in the 1419.9 - 1444.9 MHz range, 550.9 MHz above their actual frequency. For a full review, including technical test results, see Monitoring Times, November 1998.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface

included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

AR8200: 1998 vintage. S/N 550004 tested. Portable, high end "super" scanner covers 0.1 - 2040 MHz (minus cellular in USA version). Not a scanner for beginners. Many of the settings are made through the use of menus. Lots of features. 4 AA batteries, steel belt clip, plug-in AM antenna. 1,000 conventional channels in 20 banks, 10 temporary channels, one priority channel. Each memory channel may be programmed with frequency, label, mode, step, step-adjust, offset, attenuator enable, noise limiter, AFC, and write protect. Multi bank scanning. You can enable a 0 - 9 second rescan delay with each scan group, but not per channel. 40 pairs of search limits with labels. Offset capability for monitoring repeater input frequency. LCD display easy to read. Display and keypad backlit using green LEDs. The band scope. Shortwave reception stone deaf on shortwave when fitted with the supplied antenna or a 19" whip. Seriously overloaded on shortwave by a 132 foot long dipole unless we use the built-in attenuator. Supplied "dorsal fin" antenna for AM BCB. Scans slowly (14 channels/s). Requires more current. Audio quality is slightly above other portable scanners. Computer port. One slot for a single plug-in option: voice inversion descrambler, CTCSS search, 256 frequency tone eliminator, voice recorder and playback, or extended (slow) memory. See AOR AR8200 review by Bob Parnass,in Monitoring Times, October 1998, for review with quantitative test results.

ICOM

IC-R10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search

limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets

you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1977 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power

transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket

and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A

query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the

part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none.

Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image

rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The

Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-91: 1998 vintage. Portable made by Uniden for Radio Shack. 150 channels in 5 banks. Can selectively follow conversations in 800 MHz Motorola trunked radio systems. Censors 823.975 - 823.95 and 894.0125 - 896.1 MHz covered by the BC235XLT. Powered by four individual AA alkaline or NiCd batteries. Power save feature. Program key. One priority channel/bank. One search bank. Direct search. Service search omits many police freqs (inc. 460 - 460.5 MHz). While connected to an outdoor antenna, our PRO-91 experiences intermodulation interference in the 161 MHz range from a paging transmitter on 158.1 MHz. IFs near 380.7, 10.85 and 0.450 MHz. See PRO-91 review by Bob Parnass, in Monitoring Times, December 1998, for review with quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per

channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date.

Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search.

No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, and 0.455. For a service manual, call SONY at (800)488-7669, and press 3. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you

find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes

FR2526 10 X X yes yes
FR2527 10 X X yes yes
FR2528 10 X X yes yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies

far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country since 1994, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 11" by 17" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc. See http://www.megsinet.com/~parnass for a sample.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and

wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $10.00, the deluxe report includes and extra index sorted by frequency and a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $39.95 for deluxe RadioMap report with histogram and additional index by frequency. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including Delphion's server:
